11th International Conference of Numerical Analysis and Applied Mathematics 2013
ICNAAM 2013

Editor
Theodore Simos
King Saud University, Riyadh, Saudi Arabia, University of Peloponness, Tripolis, Greece

Co-Editors
Georgios Psihoyos
University of Peloponness, Tripolis, Greece
Charalambos Tsitouras
Technological Educational Institute of Chalkis, Psahna, Greece

All papers have been peer reviewed.

Sponsoring Organizations
European Society of Computational Methods in Sciences, Engineering and Technology
Santilli Foundation

To learn more about AIP Proceedings visit http://proceedings.aip.org
A multiple extended trial equation method for the fractional Sharma-Tasso-Olver equation
Yusuf Pandir, Yusuf Gurefe, and Emine Misirli
1927

Traveling wave solutions by extended trial equation method
Yusuf Gurefe and Emine Misirli
1931

GENERAL SESSION

Modified Gaussian elimination without division operations
Vaclav Skala
1936

Mass-dependent instability of an oscillator with additive and multiplicative random forces
M. Gitterman and D. Kessler
1940

Are the non equilibrium thermodynamics postulates necessary in modeling coating formation by drying?
George D. Verros and George K. Xentes
1943

Matter-wave exact periodic solutions in optical lattices with periodic potential
Changfu Liu and Aijun Zhu
1947

Applications of the functional variable method for finding the exact solutions of nonlinear evolution equations in mathematical physics
E. M. E. Zayed, S. A. Hoda, and Ibrahim A.H. Arnous
1951

Comparison between stochastic simulation of metallic grain structures (random vertexes creation and random nucleation and growth)
1957

Tube bending on the roll machine
Rostislav I. Nepershin
1962

Comparative analysis on convexity methods for proving blowup
Xiaoqiang Dai, Yue Wang, Lin Zhao, and Runzhang Xu
1966

Quenching phenomenon for nonlinear parabolic problems with opposite absorption sources
Weipeng Wu, Zhengsheng Xu, and Runzhang Xu
1970

Study of system dynamics and its application in water resources estimation
Song Gao, Senyang Wu, and Runzhang Xu
1974
Convergence of the quadrature-differences method for singular integro-differential equations on the interval
A. I. Fedotov 1978

A verification of the genetic programming method in the inverse analysis of moisture transport in building materials
Jan Kočí, Jiří Maděra, and Robert Černý 1982

Automatic time stepping with Newton-Raphson method for two-phase fluid flow in porous media
Wenqing Wang, Joshua Taron, Uwe-Jens Görke, and Olaf Kolditz 1986

Approximate solution for fractional Zakharov-Kuznetsov equation using the fractional complex transform
Mohamed S. Mohamed, Faisal Al-Malki, and Khaled A. Gepreel 1989

Numerical analysis of soft clay performance reinforced by geosynthetics encased stone columns
Nabil M. Nagy 1995

The enhanced modified simple equation method for solving nonlinear evolution equations with variable coefficients
E. M. E. Zayed and A. H. Arnous 1999

CFD and experimental study of convectional heat transfer in free falling particle curtains
Sepideh Afshar and Madoc Sheehan 2005

Body force term comparison in lattice Boltzmann method for shallow water equations
O. Raizer, H. Smaoui, A. Ouahsine, and P. Sergent 2009

Numerical solution for the diffusion equation using a variational formulation
R. Guirardello 2014

Numerical solution for adsorption in porous spheres using a variational formulation
R. Guirardello 2018

An asymptotic variational formulation for the diffusion equation
R. Guirardello 2022

Analysis of stochastic equilibria for nonlinear discrete systems with parametrical noise
Irina Bashkirtseva 2026

Numerical analysis of noise-induced oscillating bistability in a prey-predator plankton system
Lev Ryashko 2030

Approximation of stochastic attractors for nonlinear SDEs via confidence domains
Lev Ryashko 2034

Determination of moisture-dependent moisture diffusivity using smoothed experimental data
Václav Kočí, Jan Kočí, Kamil Durana, Jiří Maděra, and Robert Černý 2038
An efficient modified Gabriel method for triangulating complex fractured media for multiphase flow simulations
Hussein Mustapha, Mael Rouxel-Labbé, and Hicham Abbas 2042

Multiphase flow simulations in heterogeneous fractured media through hybrid grid method
Hussein Mustapha 2048

On subhypergroups of fortified transposition hypergroups
Ch. G. Massouros and G. G. Massouros 2055

Isomorphism theorems in fortified transposition hypergroups
Christos G. Massouros 2059

Numerical simulation of the dissolution process of silicon into germanium melt
Neil Armour, Farid Mechigel, and Sadik Dost 2063

Differentiable families of stabilizers for planar bimodal linear control systems
Josep Ferrer, M. Dolors Magret, and Marta Peña 2068

Optimization the regions thickness of flat heat pipe
Hamdy Hassan and Souad Harmand 2072

Effect of Cu-water nanofluid on the heat transfer by rotating heat pipe
Hamdy Hassan and Souad Harmand 2076

Numerical simulation of a mathematical model of combination of immunotherapy and chemotherapy of cancer
Hsiu-Chuan Wei, Shin-Feng Hwang, Yuh-Yih Chen, and Tze-Jang Chen 2080

Multi-robot forest coverage for unweighted terrain
Vladimir Popov 2083

Automatic generation of modules of object categorization for autonomous mobile robots
Anna Gorbenko 2087

Mapping method in life sciences and beyond
Marcin Molski 2091

Numerical characterization of the hydrodynamics and thermal behavior of air flow in flexible air distribution system
Samad Gharehdaghi and Samir Moujaes 2095

Numerical solution of stochastic nonlinear differential equations using Wiener-Hermite expansion
A. S. Al-Johani and M. A. El-Beltagy 2099
Finite element methods for viscous incompressible flow with interface pressure jumps
G. Buscaglia and V. Ruas

Static task of von Mises planar truss analyzed using the potential energy
Martin Kalina

On fractional order of an oscillatory system
S. A. David and C. A. Valentim Jr.

Experimental measurement and mathematical calculation evaporator temperatures of closed loop thermosyphon
Patrik Nemec, Milan Malcho, and Jozef Jandačka

A comparison of two hybrid methods for applying the time-fractional heat equation to a two dimensional function
B. A. Jacobs and C. Harley

Animal spirits, competitive markets, and endogenous growth
Kenji Miyazaki

Equivalence of absolute and unconditional convergences for wavelet systems
Anush Martirosyan

Identification of weakly non-Newtonian properties at small shear rates
Inna Elyukhina and Rafail Apakashev

Numerical method for stress fields calculation in dissimilar elastic material with initial crack in axially symmetrical geometry
M. Michaeli, F. Assous, and A. Golubchik

Two-phase modeling of interphase heat transport from the condensation to evaporation part of the heat-pipe
Richard Lenhard and Jozef Jandačka

Fractional-order in a macroeconomic dynamic model
S. A. David, D. D. Quintino, and J. Soliani

Time series clustering analysis of health-promoting behavior
Chi-Ta Yang, Yu-Shiang Hung, and Guang-Feng Deng

Determination of the residual stress-crack opening relationship of SFRC flexural members
Gintarė Kaklauskas, Viktor Gribniak, Adas Meskenas, Arvydas Rimkus, Arturas Kaklauskas, and Rimantas Kupliauskas

Verification of RRA and CMC in OpenSim
Yuma Ieshiro and Toshiaki Itoh
HEAT exchanger design for hot air Ericsson-Brayton piston engine
Peter Đurčanský, Richard Lenhard, and Jozef Jandačka 2159

Adjoint-based analysis of thermoacoustic coupling
Mathias Lemke, Julius Reiss, and Jörn Sesterhenn 2163

Correspondence between Schwarzian derivative of ODE and cross-ratio of ordinary difference equation
Toshiaki Itoh 2167

Efficient design of a truss beam by applying first order optimization method
Filip Fedorik 2171

Gradient vs. approximation design optimization techniques in low-dimensional convex problems
Filip Fedorik 2175

Fast parallel computation algorithm in application to simulation of semi-solid steel rolling and inverse analysis of its properties
Mirosław Główacki, Tomasz Dębiński, and Izabela Olejarczyk-Wożeńska 2179

Magnetic diffusion and current relaxation
F. E. M. Silveira 2183

Analytical solutions for limit cycles of the forced Van der Pol Duffing oscillator
Anant Kant Shukla, T. R. Ramamohan, and S. Srinivas 2187

Numerical modelling of electric current flow in nanocrystalline 2D carbon-palladium structures via homogenization method
Włodzimierz Bielski, Adam Idzik, Piotr Kowalczyk, Elżbieta Czerwosz, and Joanna Rymarczyk 2193

Modelling elastic and plastic material properties with the movable cellular automata
Dorota Aniszewska and Marek Rybaczuk 2197

Numerical simulation of air and oxy-fuel combustion of single coal particles using the reactive implicit continuous-fluid Eulerian (RICE) method
Robert Lewtak 2201

Structural stability of planar bimodal linear systems
Josep Ferrer, Marta Peña, and Antoni Susín 2205

A macroscopic model for intersecting pedestrian streams with tactical and strategical redirection
Hartmut Schwandt, Frank Huth, and Günter Bärwolff 2209

A hermite finite element method for convection-diffusion equations
V. Ruas and P. Trales 2213

Thermal stress analysis of DSG solar absorber tube in stratified two-phase regime
Wenzhi Cui, Hongxiang Li, Longjian Li, and Quan Liao 2217
Determination and correlation of phase behavior and physical properties for benign synthetic process of diphenylcarbonate
So-Jin Park and Inyong Jeong 2221

Modeling of fiber orientation in viscous fluid flow with application to self-compacting concrete
Filip Kolafík and Bohék Patzák 2225

CFD simulation of liquid-liquid dispersions in a stirred tank bioreactor
R. Gelves 2229

Chaos in electronic circuits and studies of bifurcation mechanisms
Sadatøka Furui 2233

Satellite image classification using convolutional learning
Thao Nguyen, Jiho Han, and Dong-Chul Park 2237

Simulation of bubble growing with lattice Boltzmann method
Sixu Chen, Longjian Li, and Anjie Hu 2241

On the numerical integration of a random integral equation arising in the simulation of stochastic transport equations
Hugo de la Cruz, C. H. Olivera, and J. P. Zubelli 2245

Finite difference method for two-phase obstacle problem
Rafayel Barkhudaryan 2249

A class of efficient preconditioners with multilevel sequentially semiseparable matrix structure
Yue Qiu, Martin B. van Gijzen, Jan-Willem van Wingerden, and Michel Verhaegen 2253

Taming anomaly detection for industrial applications through spatial ponderation
Sebastian Feller, Yavor Todorov, Daniel Jaroszewski, and Roger Chevalier 2257

Stochastic analysis of the lateral–torsional buckling resistance of steel beams with random imperfections
Zdeněk Kala 2261

Chosen interval methods for solving linear interval systems with special type of matrix
Barbara Szyszka 2265

Efficiency of the meshless local Petrov-Galerkin method with moving least squares approximation for thermal conduction applications
Nikolaos P. Karagiannakis, George C. Bourantas, Alexandros N. Kalarakis, Eugene D. Skouras, and Vasilis N. Burganos 2269

A two-phase coupled Eulerian-Lagrangian FEM for offshore spudcan analysis
Jiang Tao Yi, Fook Hou Lee, Yu Ping Li, Xi Ying Zhang, and Siang Huat Goh 2273
An induced dimension reduction algorithm to approximate eigenpairs of large nonsymmetric matrices
   Reinaldo Astudillo and Martin B. van Gijzen 2277

Preconditioning of the Navier-Stokes equations with multiple constraints
   Raymon White, Matthias Heil, and Milan Mihajlović 2281

Adaptive solution of Laplace equation
   Václav Valenta, Václav Šátek, Jiří Kunovský, and Patricia Humenná 2285

Taylor series based computations and MATLAB ODE solvers comparisons
   Václav Šátek, Jiří Kunovský, Filip Kocina, and Jan Chaloupka 2289

Parallel computations based on automatic transformation of ordinary differential equations
   Jan Kopřiva, Jiří Kunovský, Václav Šátek, Martina Drozdová, and Alexander Schirrer 2293

Study of the injector design in impulse hydro turbines
   Athanasios V. Nesiadis, John S. Anagnostopoulos, and Dimitris E. Papantonis 2297

Development of a hydraulic turbine design method
   Ioannis Kassanos, John Anagnostopoulos, and Dimitris Papantonis 2301

Dynamic responses of a grotto under strong earthquake, Yungang Grottoes, Shanxi province, China
   Ningbo Peng, Zhixin Yan, Bo Sun, and Le Gao 2305

Influence of ground parameters on the dynamic responses of anchored bedding rock slope
   Zhi-xin Yan, Le Gao, Ningbo Peng, and Gang Gao 2309

DOAF-optimizer module
   Calin Cirstea, Octavian Prostean, and Cosmin Cirstea 2313

Thermodynamic analysis on one isothermal expansion process
   Juanfang Liu and Qinghua Chen 2317

3D simulation of the melt flow in detached solidification under a cusp-magnetic field
   Lan Peng and Huan Gong 2321

Identification of frequent touristic routes using the SMoT algorithm
   Eduardo Restrepo, Francisco Moreno, and Fernando Sánchez Lasheras 2325

Formulation of SPH for discretizing the fractional differentiation
   Hiroyuki Kisu, Guiming Rong, and Yoshihiro Kondo 2329

Numerical investigations of cold gas dynamic spray with a novel convergent-divergent nozzle
   Quan Liao and Zhihai Tan 2333
Effective-stress finite element analysis of spudcan penetration with lattice leg in clay
Yu Ping Li, Fook Hou Lee, Jiang Tao Yi, Xi Ying Zhang, and Siang Huat Goh 2337

Numerical study on acoustics in bubbly liquids based on weakly nonlinear wave equations
Tetsuya Kanagawa and Ryu Egashira 2341

Discontinuous Galerkin method for coupled problems of compressible flow and elastic structures
A. Kosík, M. Feistauer, M. Hadrava, and J. Horáček 2344

Discontinuous Galerkin method for the problem of linear elasticity with applications to the fluid-structure interaction
M. Hadrava, M. Feistauer, J. Horáček, and A. Kosík 2348

Approximate solutions of equilibrium equations of sandwich circular plate
Ewa Magnucka-Blandzi and Leszek Wittenbeck 2352

Computing dynamically equivalent realizations of biochemical reaction networks with mass conservation
János Rudan, Gábor Szederkényi, and Katalin M. Hangos 2356

Simulation of photosynthetic production using neural network
Tibor Kmet and Maria Kmetova 2360

On space enrichment estimator for nonlinear Poisson-Boltzmann
Maharavo Randrianarivony 2365

Some numerical enhancements in a data assimilation scheme
R. Farina, S. Dobricic, and S. Cuomo 2369

On discontinuous Galerkin for time integration in option pricing problems with adaptive finite differences in space
Lina von Sydow 2373

On non-parametric methodology of the plasma turbulence research
Andrey K. Gorshenin, Victor Yu. Korolev, Nina N. Skvortsova, and Dmitry V. Malakhov 2377

On investigation of the fine structure of processes in low-frequency plasma turbulence
Andrey K. Gorshenin, Victor Yu. Korolev, German M. Batanov, Nina N. Skvortsova, and Dmitry V. Malakhov 2381

Size segregation in the Brazil nut effect
Aline C. Soterroni and Fernando M. Ramos 2385

The q-gradient method for continuous global optimization
Aline C. Soterroni, Roberto L. Galski, and Fernando M. Ramos 2389

Numerical investigation of the effect of delaminations on fracture characteristics of glare
Sunil Bhat and S. Narayanan

Clocking convergence to Arnold tongues - The $H$-rank approach
Mantas Landauskas and Minvydas Ragulskis

On the numerical integration of Hill's problem
A. Hussein and M. C. Santos

Damped interconnection-based mitigation of seismic pounding between a R/C tower and a masonry church
F. Pratesi, S. Sorace, and G. Terenzi

Passive energy dissipation enhancement of linear frame structures by the damped cable system
S. Sorace and G. Terenzi

A correction for computing matrix-valued Nevanlinna-Pick interpolation problem
Cuneyt Yazıcı and Hulya Kodal Sevindir

An image denoising application using shearlets
Hulya Kodal Sevindir and Cuneyt Yazıcı

On analysis of electroencephalogram by multiresolution-based energetic approach
Hulya Kodal Sevindir, Cuneyt Yazıcı, A. H. Siddiqi, and Zafer Aslan

A network-based evolutionary method to solve inconsistent simultaneous equations approximately
Hideaki Suzuki and Yoh Iwasa

Model of electron tunneling through molecular junction: Numerically exact solution and performance of approximation methods
Martin Čížek and Lukáš Gráf

Fast $O_{\text{expected}}(N)$ algorithm for finding exact maximum distance in $E^2$ instead of $O(N^2)$ or $O(N \text{ lg} N)$
Vaclav Skala

New geometric continuity solution of parametric surfaces
Vaclav Skala

Modelling the effect of an alternative host population on the spread of citrus Huanglongbing
Raphael G. d'A. Vilamiu, Sonia Ternes, Francisco F. Laranjeira, and Tâmara T. de C. Santos

Trigonometric fitted Runge-Kutta-Nyström pair of orders 6(4)
Ch. Tsitouras
Effect of random axial curvature on the performance of open and closed section steel columns
Jan Vales

Parikh matrices of words under a generalized Thue morphism
K. G. Subramanian, Pradeep Isawasan, Ibrahim Venkat, and Ahamad Tajudin Khader

Estimation of the largest Lyapunov exponent for long-range correlated stochastic time series
Oleg Gorshkov

A statistical feature selection method for lung cancer classification in CT scans
Hamada R. H. Al-Absi and Brahim Belhaouari Samir

A coupling model of light propagation based on the radiative transfer and diffusion equations
Hiroyuki Fujii, Yoko Hoshi, Shinpei Okawa, Tetsuya Yoshinaga, Satoru Kohno, and Yukio Yamada

SYMPOSIUM #59
Preface of the "Symposium on advances in nonlinear estimation for distributed parameter and robotic systems"
Gerasimos Rigatos

A derivative-free nonlinear Kalman filtering approach to estimation of wave-type dynamics in neurons' membrane
Gerasimos G. Rigatos and Efthymia G. Rigatou

Channel equalization and synchronization in chaotic communications using a dual Kalman filtering scheme
Gerasimos Rigatos and Nikolaos Zervos

Control of quadrotors using differential flatness theory and the derivative-free nonlinear Kalman filter
Gerasimos Rigatos and Pierluigi Siano

Control of underactuated robotic systems with the use of the derivative-free nonlinear Kalman filter
Gerasimos G. Rigatos and Pierluigi Siano

Adaptive fuzzy control of underactuated robotic systems with the use of differential flatness theory
Gerasimos G. Rigatos

A Kalman filtering approach for validation of sensor networks monitoring distributed parameter systems
Gerasimos G. Rigatos

A Kalman filtering approach to robust synchronization of coupled neural oscillators
Gerasimos G. Rigatos and Efthymia G. Rigatou
On the Lie symmetries of first-order ordinary differential equations
   Necdet Bildik and Mehmet Açıl 2575

On the solution of system of fractional nonlinear predator-prey population model via homotopy decomposition method
   Abdon Atangana 2579

Author Index 2591
