HEAT TRANSFER IN ENERGY SYSTEMS

COMPUTATIONAL AND EXPERIMENTAL THERMAL RADIATION

HT2013-17152..................................................................................................................V001T01A001
A Parametric Study of the Accuracy of Several Radiative Transport Solution Methods for a
Set of 2-D Benchmark Problems
  John Tencer and John R. Howell

HT2013-17183..................................................................................................................V001T01A002
A Parametric Numerical Study of Radiative Transfer in Thermotropic Materials
  Adam C. Gladen, Susan C. Mantell, and Jane H. Davidson

HT2013-17271..................................................................................................................V001T01A003
Design and Verification of a PECVD Fabricated Multi-Layer Nano-Scale Photovoltaic Device
  Shima Hajimirza, John R. Howell, Milo Holt, Sayan Saha, Deji Akinwande, and
  Sanjay Banerjee

HT2013-17382..................................................................................................................V001T01A004
Effect of Morphology on Spectral Radiative Properties of Three-Dimensionally Ordered
Macroporous Ceria Packed Bed
  Krithiga Ganesan, Jaona Randrianalisoa, and Wojciech Lipiński

HT2013-17413..................................................................................................................V001T01A005
Theoretical Predictions of Spectral Emissivity for Coal Ash Deposits
  Dong Liu, Yuan-Yuan Duan, and Zhen Yang

HT2013-17503..................................................................................................................V001T01A006
Investigation of Optimal Wavenumber Range and Resolution for Determination of Combustion
Gas Temperature and Concentration
  Tao Ren, Todd A. Reeder, and Michael F. Modest

HT2013-17556..................................................................................................................V001T01A007
Implementation of the P\textsubscript{\infty}-Approximation for Radiative Heat Transfer on OpenFOAM
  Ricardo Marquez and Michael Modest

HT2013-17647..................................................................................................................V001T01A008
Comparisons of Radiative Heat Transfer Calculations Using Spherical Harmonics and
K-Distributions
  Jian Cai and Michael F. Modest

HT2013-17689..................................................................................................................V001T01A009
Parametric Study of Simultaneous Radiative Transfer in Plane-Parallel Scattering Medium With
Variable Refractive Index by Spectral Collocation Method
  Jing Ma, Yasong Sun, and Benwen Li
HEAT AND MASS TRANSFER IN COOLING, HEATING AND POWER SYSTEMS

Modeling Approach of Thermal Decomposition of Salt-Hydrates for Heat Storage Systems
Armand Fopah Lele, Frédéric Kuznik, Holger Urs Rammelberg, Thomas Schmidt, and Wolfgang K. L. Ruck

Energy Conservation Measures of a Primary Data Center on an Academic Campus
Kyosung Choo, Renan Manozzo Galante, and Michael Ohadi

Improved Correlations for Counting the Effect of Natural Convection on Laminar Flow of Nanofluids
Si-pu Guo, Zhao-zan Feng, Ze-cong Fang, Wei Li, Jin-liang Xu, and Pei-xue Jiang

Technologies for Upgrading Light Water Reactor Outlet Temperature
Daniel S. Wendt, Piyush Sabharwall, and Vivek Utgikar

Steady-State Performance of a Prototype (200 cfm) Liquid-to-Air Membrane Energy Exchanger (LAMEE) Under Summer and Winter Test Conditions
Davood Ghadiri Moghaddam, Gazi Mahmood, Gaoming Ge, John Bolster, Robert W. Besant, and Carey J. Simonson

Application of Genetic Algorithm-Polynomial Neural Network for Modelling Heat Transfer and Fluid Flow Characteristics of a Double-Pipe Heat Exchanger
Mehdi Mehrabi, Tuhid Pashaee, Mohsen Sharifpur, and Josua P. Meyer

On Fluid Flow and Heat Transfer in a Pipe With a U-Bend
Christopher G. Cvetkovski, Hoda S. Mozaffari, Stanley Reitsma, Tirupati Bolisetti, and David S.-K. Ting

Numerical Solution of a Ground Source Heat Pump System Using Foundation Piles
Masahito Oguma, Takeshi Matsumoto, Ayako Funabiki, Futoshi Miyaoka, Kosuke Ito, and Takao Kakizaki

Design of a Fluid-Based Micro-Scale Electrocaloric Refrigeration System
Dongzhi Guo, Jinsheng Gao, Ying-Ju Yu, Suresh Santhanam, Gary K. Fedder, Alan J. H. McGaughey, Shi-Chune Yao, and Andrew Slippey

Numerical Study on Thermo-Hydraulic Performance in the Shell Side of Spiral-Wound Heat Exchanger
G. P. Zhang, M. Zeng, Y. Li, Y. Z. Niu, and O. W. Wang
Fundamental Basis and Application of Cold-Room Project Design: A Case Study of Frigoship  
Merve Öztürk, Emine Göktepe, Ali Celen, Alıcan Çebi, Ahmet Selim Dalkılıç, and Somchai Wongwises

Experimental Study of Water Vapor Absorption Into Lithium Bromide (LiBr) Solution Constrained by Superhydrophobic Porous Membranes  
Rasool Nasr Isfahani and Saeed Moghaddam

Optimal Allocation of Heat Exchanger Inventory for Maximum COP and Exergetic Performance of a Two-Stage Vapor Compression Cycle  
Yousef M. Abdel-Rahim and S. A. Sherif

Forced Convection Heat Transfer of a Phase Change Material (PCM) Nanoemulsion  
Ryan Anderson, Masahiro Kawaji, Kenichi Togashi, and Ravi Ramnanan-Singh

Analysis of Li-Ion Battery Characteristics and Thermal Behavior  
Krishnashis Chatterjee, Pradip Majumdar, David Schroeder, and S. Rao Kilaparti

Combined Experimental-Numerical Approach to Determine Radiation Properties of Particle Suspensions  
Jan Marti, Matthew Roesle, and Aldo Steinfeld

An Experimental Study of Thermal Performance of a Two-Phase Loop Thermosyphon (TPLT)-Based Steam Generator: Effects of Thermal Boundary Conditions  
Meng Hua, Liang Zhang, Zi-Qin Zhu, Li-Wu Fan, Zi-Tao Yu, and Ya-Cai Hu

A Comparative Cost and Performance Analysis of Structured and Packed-Bed Thermocline Thermal Energy Storage Systems  
Matthew N. Strasser and R. Panneer Selvam

Assisted Turbulence Convective Heat Transfer for Cooling the Photovoltaic Cells  
I. Arianmehr, D. S.-K. Ting, and S. Ray

Beam Splitting System for the Development of a Concentrating Linear Fresnel Solar Hybrid PV/T Collector  
Felipe Crisostomo, Robert A. Taylor, Ahmad Mojiri, Evatt R. Hawkes, Desiree Surjadi, and Gary Rosengarten

Optical Analysis of a New CPC-Based Solar Collector Designed for Hydrogen Production  
Xiaoguang Gu, Robert A. Taylor, and Gary Rosengarten
