# Brauer Groups, Tamagawa Measures, and Rational Points on Algebraic Varieties

Jörg Jahnel

**American Mathematical Society**  
Providence, Rhode Island

# Contents

Preface	vii
Introduction	1
Notation and conventions	11
<b>Part A. Heights</b>	<b>13</b>
Chapter I. The concept of a height	15
1. The naive height on the projective space over $\mathbb{Q}$	15
2. Generalization to number fields	17
3. Geometric interpretation	21
4. The adelic Picard group	25
Chapter II. Conjectures on the asymptotics of points of bounded height	35
1. A heuristic	35
2. The conjecture of Lang	38
3. The conjecture of Batyrev and Manin	40
4. The conjecture of Manin	44
5. Peyre's constant I—the factor $\alpha$	47
6. Peyre's constant II—other factors	50
7. Peyre's constant III—the actual definition	59
8. The conjecture of Manin and Peyre—proven cases	62
<b>Part B. The Brauer group</b>	<b>81</b>
Chapter III. On the Brauer group of a scheme	83
1. Central simple algebras and the Brauer group of a field	84
2. Azumaya algebras	89
3. The Brauer group	93
4. The cohomological Brauer group	94
5. The relation to the Brauer group of the function field	98
6. The Brauer group and the cohomological Brauer group	101
7. The theorem of Auslander and Goldman	103
8. Examples	107
Chapter IV. An application: the Brauer–Manin obstruction	119
1. Adelic points	119
2. The Brauer–Manin obstruction	122
3. Technical lemmata	126
4. Computing the Brauer–Manin obstruction—the general strategy	129
5. The examples of Mordell	132

6. The “first case” of diagonal cubic surfaces	146
7. Concluding remark	161
<b>Part C. Numerical experiments</b>	<b>163</b>
Chapter V. The Diophantine equation $x^4 + 2y^4 = z^4 + 4w^4$	165
Numerical experiments and the Manin conjecture	165
1. Introduction	166
2. Congruences	167
3. Naive methods	169
4. An algorithm to efficiently search for solutions	169
5. General formulation of the method	171
6. Improvements I—more congruences	172
7. Improvements II—adaptation to our hardware	176
8. The solution found	182
Chapter VI. Points of bounded height on cubic and quartic threefolds	185
1. Introduction—Manin’s conjecture	185
2. Computing the Tamagawa number	189
3. On the geometry of diagonal cubic threefolds	193
4. Accumulating subvarieties	195
5. Results	199
Chapter VII. On the smallest point on a diagonal cubic surface	205
1. Introduction	205
2. Peyre’s constant	208
3. The factors $\alpha$ and $\beta$	209
4. A technical lemma	211
5. Splitting the Picard group	212
6. The computation of the $L$ -function at 1	216
7. Computing the Tamagawa numbers	219
8. Searching for the smallest solution	221
9. The fundamental finiteness property	222
10. A negative result	233
Appendix	239
1. A script in GAP	239
2. The list	241
Bibliography	247
Index	261
