## Testing I

An Exploratory Study of Higher Order Mutation Testing in Aspect-Oriented Programming

Elmahdi Omar and Sudipto Ghosh

Using Non-redundant Mutation Operators and Test Suite Prioritization to Achieve Efficient and Scalable Mutation Analysis

René Just, Gregory M. Kapfhammer, and Franz Schweiggert

Mutation Testing of Event Processing Queries

Lorena Gutiérrez-Madroñal, Hossain Shahriar, Mohammad Zulkernine, Juan José Domínguez-Jiménez, and Inmaculada Medina-Bulo

## Reliability and Availability I

Detection of Software Failures through Event Logs: An Experimental Study

Antonio Pecchia and Stefano Russo

An Empirical Study of the Effectiveness of “Forcing” Diversity Based on a Large Population of Diverse Programs

Peter Popov, Vladimir Stankovic, and Lorenzo Strigini
Hybrid Statistical Model Checking Technique for Reliable Safety Critical Systems .......................................................................................................................... 51

Youngjoo Kim and Moonzoo Kim

Security

On the Verification and Validation of Signature-Based, Network Intrusion Detection Systems ........................................................................................................... 61

Frédéric Massicotte and Yvan Labiche

Using Population Characteristics to Build Forecasting Models for Computer Security Incidents ........................................................................................................... 71

Edward Condon and Michel Cukier

Using Multiclass Machine Learning Methods to Classify Malicious Behaviors Aimed at Web Systems .......................................................................................... 81

Katerina Goseva-Popstojanova, Goce Anastasovski, and Risto Pantev

Static and Dynamic Analysis

Dynamic Analysis of Upgrades in C/C++ Software .......................................................................................................................... 91

Fabrizio Pastore, Leonardo Mariani, Alberto Goffi, Manuel Oriol, and Michael Wahler

Speculative Symbolic Execution ............................................................................................................................................... 101

Yufeng Zhang, Zhenbang Chen, and Ji Wang

 Automated Checking of Web Application Invocations .................................................................................................................. 111

William G.J. Halfond

Improving Coverage-Based Localization of Multiple Faults Using Algorithms from Integer Linear Programming .................................................................................. 121

Friedrich Steimann and Marcus Frenkel

Reliability and Availability II

Software Life-Extension: A New Countermeasure to Software Aging .......................................................................................................................... 131

Fumio Machida, Jianwen Xiang, Kumiko Tadano, and Yoshitaru Maeno

What Is System Hang and How to Handle It .......................................................................................................................... 141

Yian Zhu, Yue Li, Jingling Xue, Tian Tan, Jialong Shi, Yang Shen, and Chunyan Ma

Data Loss Prevention Based on Data-Driven Usage Control .......................................................................................................................... 151

Tobias Wüchner and Alexander Pretschner
# Testing II

Lightweight Automated Testing with Adaptation-Based Programming ........................................... 161
Alex Groce, Alan Fern, Jervis Pinto, Tim Bauer, Amin Alipour, Martin Erwig, and Camden Lopez

Overlap and Synergy in Testing Software Components across Loosely Coupled Communities ............. 171
Teng Long, Ilchul Yoon, Adam Porter, Alan Sussman, and Atif Memon

On the Relative Strengths of Model-Based and Dynamic Event Extraction-Based GUI Testing Techniques: An Empirical Study ................................................................. 181
Gigon Bae, Gregg Rothermel, and Doo-Hwan Bae

## Practical Experience Reports I

Are Computer Focused Crimes Impacted by System Configurations? An Empirical Study ......................... 191
Bertrand Sobesto, Michel Cukier, and David Maimon

Evaluating and Improving Penetration Testing in Web Services ....................................................... 201
Nuno Antunes and Marco Vieira

On the Aging Effects Due to Concurrency Bugs: A Case Study on MySQL ........................................... 211
Antonio Bovenzi, Domenico Cotroneo, Roberto Pietrantuono, and Stefano Russo

# Validation

Shared Execution for Efficiently Testing Product Lines ........................................................................... 221
Chang Hwan Peter Kim, Sarfraz Khurshid, and Don Batory

Recycling Test Cases to Detect Security Vulnerabilities ........................................................................... 231
Joao Antunes and Nuno Neves

Revolution: Automatic Evolution of Mined Specifications ....................................................................... 241
Leonardo Mariani, Alessandro Marchetto, Cu D. Nguyen, Paolo Tonella, and Arthur Baars

AutoInSpec: Using Missing Test Coverage to Improve Specifications in GUIs ........................................ 251
Myra B. Cohen, Si Huang, and Atif M. Memon

# Defect Analysis and Metrics

A Light-Weight Defect Classification Scheme for Embedded Automotive Software and Its Initial Evaluation ........................................................................................................ 261
Niklas Mellegård, Miroslaw Staron, and Fredrik Törner

An Empirical Study of Bugs in Machine Learning Systems ...................................................................... 271
Ferdian Thung, Shaowei Wang, David Lo, and Lingxiao Jiang
A Comprehensive Code-Based Quality Model for Embedded Systems:  
Systematic Development and Validation by Industrial Projects ..................................................281  
Alois Mayr, Reinhold Plösch, Michael Kläs, Constanza Lampasona,  
and Matthias Saft

Testing III  
Static Analysis of Model Transformations for Effective Test Generation ........................................291  
Jean-Marie Mottu, Sagar Sen, Massimo Tisi, and Jordi Cabot  
Lightweight Static Analysis for GUI Testing .................................................................................301  
Stephan Artt, Andreas Podelski, Cristiano Bertolini, Martin Schäf,  
Ishan Banerjee, and Atif M. Memon  
Oracle-Centric Test Case Prioritization ....................................................................................311  
Matt Staats, Pablo Loyola, and Gregg Rothermel

Practical Experience Reports II  
State-Based Testing: Industrial Evaluation of the Cost-Effectiveness  
of Round-Trip Path and Sneak-Path Strategies ..................................................................321  
Nina Elisabeth Holt, Richard Torkar, Lionel Briand, and Kai Hansen  
The Nature of the Times to Flight Software Failure during Space Missions ................................331  
Javier Alonso, Michael Grottke, Allen P. Nikora, and Kishor S. Trivedi  
On the Use of Boundary Scan for Code Coverage of Critical Embedded  
Software .....................................................................................................................................341  
João Carlos Cunha, Ricardo Barbosa, and Gilberto Rodrigues

Formal Models  
Compositional Verification of Sensor Software Using Uppall ..................................................351  
Mustafa Hammad and Jonathan Cook  
An Assertions-Based Approach to Verifying the Absence Property Pattern ..........................361  
Marc Frappier and Amel Mammar  
A MARTE Extension for Global Scheduling Analysis of Multiprocessor  
Systems ........................................................................................................................................371  
Amina Magdich, Yessine Hadj Kacem, Adel Mahfoudhi, and Mohamed Abid
