Fast Abstract I

A Resilience Design Model for IMS-based Services ................................................................. 1
  Somia Natouri and Chidung Lac

Combinatorial Analysis of Dynamic Fault Trees with Priority-AND Gates ................................ 3
  Jianwen Xiang, Fumio Machida, Kumiko Tadano, Kazuo Yanoo, Wei Sun,
  and Yoshiharu Maeno

Bohrbugs, Mandelbugs, Exhaustive Testing and Unintended Automobile Acceleration .................. 5
  Martin L. Shooman

Entropy Metrics for Agile Development Processes ........................................................................ 7
  Ozgur Aktunc

TEAMS: A Special-Purpose AOP Framework for Runtime Monitoring ......................................... 9
  Amjad Nusayr, Jonathan Cook, and Gholamali Rahnavard

Assessing AUTOSAR Systems Using Fault Injection .................................................................... 11
  As'ad Salkham, Antonio Pecchia, and Nuno Silva

Toward Baselining Software Anomalies in NASA Missions ......................................................... 13
  Lucas Layman, Marvin Zelkowitz, Victor Basili, and Allen P. Nikora

Fast Abstract II

Safety and Performance Co-engineering: New MDE Challenge for Critical
Applications Design? ......................................................................................................................... 15
  Rafik Henia, Joseph Machrouh, and Laurent Rioux

Ontology-Based Reuse of Failure Modes for FMEA: Methodology and Tool ............................... 17
  Guoqi Li

Assessing Disaster Recovery Alternatives: On-Site, Colocation or Cloud .................................... 19
  Omar H. Alhazmi and Yashwant K. Malaiya

Evidence-Based Security in Aerospace: From Safety to Security and Back
Again ........................................................................................................................................ 21
  Michael Paulitsch, Rupert Reiger, Lorenzo Strigini, and Robin Bloomfield

Formal Analysis of Device-Delay Error in User-Device Interaction
under Uncertainty .......................................................................................................................... 23
  Krishnendu Ghosh

Software at Scale for Building Resilient Wireless Sensor Networks ........................................... 25
  Catello Di Martino
Industry Papers

Session I: Reliability I

Applying Software Reliability Growth Models to DOD Systems .......................................................27
E. Andrew Long, Louis Gullo, and Allen P. Nikora

Software Reliability Classes: A Basis for Release and Product Quality Expectations ..................................................37
Sunita Chulani, Pete Rotella, and Bob Mullen

Cost Effective Reliability Centric Validation Model for Automotive ECUs ..................................................38
Ajeet Kumar Pandey, Smith Jessy, and Vivek Diwanji

Session II: Quality I

Early Performance Estimation for Industrial Component-Based Design of Reliable Software Defined Radio System ..................................................45
R. Henia, L. Rioux, N. Sordon, and T. Vergnaud

Bug Detection in Large-Scale Nuclear Power Software ..................................................47
Zheng Liu, Wentao Mo, Dangpei Ren, Guang Zhao, and Mingye Liu

Quality Playbook: Ensuring Release to Release Improvement ..................................................53
Pete Rotella, Sunita Chulani, and Satya Pradhan

Session III: Metrics

Metric-Based Quality Evaluations for Iterative Software Development Approaches Like Agile ..................................................54
Kumi Jinzenji, Takashi Hoshino, Laurie Williams, and Kenji Takahashi

Targeting Specific Customer Satisfactions Issues with ODC Analysis ..................................................64
Ram Chillarege

A Software Quality Evaluation Method Using the Change of Source Code Metrics ..................................................65
Mitsuhiro Nakamura and Tomoki Hamagami

Session IV: Testing I

Smart Unit Testing Framework ..................................................70
Lakshmankumar Mukkavilli

Customer Scenario Focused End-to-End Testing ..................................................80
Chen Liang, Aniket Malatpure, Mohammad Shafiei, Marcelo Vago, and Tsan Zheng

Applying Test Data Generation Using SMT Solver to COBOL ..................................................82
Yusuke Sasaki, Yoshiharu Maeda, Kenichi Kobayashi, and Akihiko Matsuo
Session V: Safety-Critical Systems
Overview of 10 Years of ISVV Findings in Safety-Critical Systems ........................................... 83
  Nuno Silva and Rui Lopes
Independent Assessment of Safety-Critical Systems: We Bring Data! ........................................... 84
  Nuno Silva and Rui Lopes
  Lalit Kumar Singh, Gopika Vinod, and A.K. Tripathi

Session VI: Quality II
Assessing the Performance of Networked Computer Based Systems ............................................. 95
  Shelly Agarwal
Measurements-Based Analysis of Workload-Error Relationship in a Production SaaS Cloud .......................................................... 96
  Rajeshwari Ganesan, Santonu Sarkar, Geetika Goel, and Catello Di Martino
Assessing Product Quality through PMR Analysis: A Perspective ................................................... 106
  Rajarshi Das

Session VII: Testing II
A Practical Extension of Pairwise Testing .......................................................... 116
  Oksoon Jeong
Managing Automated End to End Testing in Bitwise Heterogenous Environments ...................................................... 123
  Rossel Paul Banji, Pandit Pattabhirama, Mukul Gharpure, and Manjunath Ramachandra

Student Papers
Comparison of Static Analysis Tools for Finding Concurrency Bugs ............................................. 129
  Numan Manzoor, Hussan Munir, and Misagh Moayyed
Detecting Vulnerabilities in Service Oriented Architectures ...................................................... 134
  Nuno Antunes and Marco Vieira
Accelerate the Software Software Reliability Testing Execution Process with Fuzzy Discrimination ............................................. 140
  Feng Zheng, Jun Ai, Jingwei Shang, and Jinhui Wang
Using Profiling Metrics to Categorise Peer Review Types in the Android Project ............................................. 146
  Raula Gaikovina Kula, Carmago Cruz Ana E., Norihiro Yoshida, Kazuki Hamasaki, Kenji Fujiwara, Xin Yang, and Hajimu lida
IWPD 2012 Workshop

Session I: Fault Localization

Program Debugging with Effective Software Fault Localization (Invited Talk) .................................................. 152
W. Eric Wong

The Effect of Testability on Fault Proneness: A Case Study of the Apache HTTP Server .................................................................................................................. 153
Mark Hays and Jane Hayes

Debugging Spreadsheets: A CSP-based Approach ........................................................................................................... 159
Rui Abreu, André Riboira, and Franz Wotawa

Session II: Debugging and Dynamic Analysis

Detection of Interferences in Aspect-Oriented Programs Using Executable Assertions ................................................................................................................................. 165
Jimmy Lauret, Helene Waeselynck, and Jean-Charles Fabre

A Topology-Based Model for Estimating the Diagnostic Efficiency of Statistics-Based Approaches ................................................................. 171
Alexandre Perez, André Riboira, and Rui Abreu

Predicting Data Dependences for Slice Inspection Prioritization ...................................................................................... 177
Yiji Zhang and Raul Santelices

Session III: Debugging and Static Analysis

A Static Detecting Model for Invalid Arithmetic Operation Based on Alias Analysis ................................................................................................................................. 183
Hongbo Zhou, Qian Wang, Dahai Jin, and Yunzhan Gong

Wielding Statistical Fault Localization Statistically ........................................................................................................... 189
Yunqian Zhang, Lin Chen, Bo Jiang, and Zhenyu Zhang

Baggy Bounds with Accurate Checking ................................................................................................................................. 195
Baozeng Ding, Yeping He, Yanjun Wu, Alex Miller, and John Criswell

MoTIP 2012 Workshop

Session I: MBT of Enterprise Applications

Design-Model-Based Test Data Generation for Database Applications .................................................................................. 201
Haruto Tanno, Xiaojing Zhang, and Takashi Hoshino

Automatic GUI Model Generation: State of the Art ................................................................................................................. 207
Andres Kull
Session II: MBT Methods and Tools
Automated Risk-Based Testing by Integrating Safety Analysis Information into System Behavior Models .................................................................213
  Ramy Nazier and Thomas Bauer

Integrating Model-Based and Constraint-Based Testing Using SpecExplorer .................................................................219
  Vivek Vishal, Mehmet Kovacioglu, Rachid Kherazi, and Mohammad Reza Mousavi

Session III: Industrial Case Studies and Challenges
Integrating MDT in an Industrial Process in the Air Traffic Control Domain .................................................................225
  Gabriella Carrozza, Mauro Faella, Francesco Fucci, Roberto Pietrantuono, and Stefano Russo

A Review of Two Experiences from Applying Model Based Testing in Practice .................................................................231
  Dusica Marijan

RTW 2012 Workshop
RTW 2012 Workshop Invited Industrial Keynotes .................................................................237

A Pragmatic Approach on Combined Safety and Security Risk Analysis .................................................................239
  Frank Reichenbach, Jan Endresen, Mohammad M. R. Chowdhury, and Judith Rossebo

WoSAR 2012 Workshop
WoSAR 2012 Workshop Keynotes .................................................................245

Session I: Experimental Studies
Monitoring Memory-Related Software Aging: An Exploratory Study .................................................................247
  Rivalino Matias, Bruno Evangelista Costa, and Autran Macedo

An Advanced Methodology for Measuring and Characterizing Software Aging .................................................................253
  Pengfei Zheng, Qingguo Xu, and Yong Qi

Cost Optimality in Testing and Rejuvenation .................................................................259
  Michael Grottke and Benjamin Schleich

Monitoring of Aging Software Systems Affected by Integer Overflows .................................................................265
  Domenico Cotroneo and Roberto Natella

Session II: Rejuvenation Modeling
Multiformalism to Support Software Rejuvenation Modeling .................................................................271
  Enrico Barbierato, Andrea Bobbio, Marco Grisaudo, and Mauro Iacono
Session III: Applications of Rejuvenation

Aging-Related Bugs in Cloud Computing Software ................................................................. 287
Fumio Machida, Jianwen Xiang, Kumiko Tadano, and Yoshiharu Maeno

Characterization of Software Aging Effects in Elastic Storage Mechanisms for Private Clouds ................................................................................................................. 293
Rubens Matos, Jean Araujo, Vandi Alves, and Paulo Maciel

Software Rejuvenation: Do IT & Telco Industries Use It? ........................................................ 299
Javier Alonso, Antonio Bovenzi, Jinghui Li, Yakun Wang, Stefano Russo, and Kishor Trivedi

WOSD 2012 Workshop

Session I: Safety Case and Applications

A Proposal on a Method for Reviewing Operation Manuals of Supercomputer ....................... 305
Shotaro Takama, Vaise Patu, Yutaka Matsuno, and Shuichiro Yamamoto

Application of D-Case to the Data-Upload Flow Diagram Scenario of the Distributed E-Learning System Called KISSEL ........................................................................ 307
Vaise Patu, Yutaka Matsuno, and Shuichiro Yamamoto

A Study of Converting Risk to Assurance Case ........................................................................... 313
Motoki Yoan, Midori Sugaya, and Kimio Kuramitsu

Reconfigurable Scripting Language with Programming Risk .................................................. 316
Takuma Wakamori, Masahiro Ide, Midori Sugaya, and Kimio Kuramitsu

Requirements and Evaluation of Safety Analysis Techniques for Ambient Assisted Living Systems .................................................................................................................. 319
Adrien Mouaffo Tiadjio and Kavyashree Jamboti

Session II: Handling Changes

Handling Language Variations in Open Source Bug Reporting Systems .................................. 325
Sean Banerjee, Jesse Musgrove, and Bojan Cukic
 WoSoCER 2012 Workshop

Session I: Certification Methods
Combination of Static and Dynamic Analyses for the Certification of Avionics Software  .......................................................... 331
Antoine Ferlin and Virginie Wiels

A Method to Formally Evaluate Safety Case Evidences against a System Architecture Model  ......................................................... 337
Stefan Björnander, Rikard Land, Patrick Graydon, Kristina Lundqvist, and Philippa Conmy

Composable Safety-Critical Systems Based on Pre-certified Software Components  .......................................................... 343
Andreas Söderberg and Benjamin Vedder

Session II: Practical Experience Reports
Industrial Experiences of Building a Safety Case in Compliance with ISO 26262  .......................................................... 349
Raghad Dardar, Barbara Gallina, Andreas Johnsen, Kristina Lundqvist, and Mattias Nyberg

Agile Practices in Regulated Railway Software Development  .......................................................... 355
Henrik Jonsson, Stig Larsson, and Sasikumar Punnekkat

10 Years of ISVV: What's Next?  .......................................................... 361
Nuno Silva and Rui Lopes

Author Index  .......................................................... 367
