Discussion and Debate: Active Matter - How do Kinetic Theories Relate to Macroscopic Descriptions?

Edited by:
Len Pismen and Karsten Kruse

Published with the support of the Centre National de la Recherche Scientifique

The title “The European Physical Journal” is a joint property of EDP Sciences, Società Italiana di Fisica (SIF) and Springer
Contents

Editorial
Physicists probing active media: What is the measure of success?
L.M. Pismen ....................................................... 1243

Papers

Spontaneous nematic polarisation and deformation in active media
L.M. Pismen and M.H. Köpf ................................. 1247

An instability at the edge of a tissue of collectively migrating cells can lead to finger formation during wound healing
J. Zimmermann, M. Basan and H. Levine .................... 1259

Modular approach for modeling cell motility
F. Ziebert and I.S. Aranson ................................. 1265

Traveling bands in self-propelled soft particles
T. Ohta and S. Yamanaka ................................. 1279

Towards a quantitative kinetic theory of polar active matter
T. Ihle .......................................................... 1293

Boltzmann-Ginzburg-Landau approach for continuous descriptions of generic Vicsek-like models
A. Peshkov, E. Bertin, F. Ginelli and H. Chaté .............. 1315

Amoebalike motion of an oil droplet
Y. Sumino and K. Yoshikawa .............................. 1345

Polymerization, bending, tension: What happens at the leading edge of motile cells?
M. Falcke and J. Zimmermann .............................. 1353

How do cells produce and regulate the driving force in the process of migration?
Y. Zhong and B. Ji ......................................... 1373

Cytoskeletal turnover and Myosin contractility drive cell autonomous oscillations in a model of Drosophila Dorsal Closure
P.F. Machado, G.B. Blanchard, J. Duque and N. Gorfinkiel .... 1391
Discussion

Comment on Ziebert & Aranson, “Modular approach for modeling cell motility”
B. Ji ................................................................. 1403

Reply to comment by Baohua Ji
F. Ziebert and I.S. Aranson ................................. 1407

Discussion on Ohta et al., “Traveling bands in self-propelled soft particles”
T. Ihle and Y.-L. Chou ......................................... 1409

Discussion notes: Soliton-like behavior of traveling bands
T. Ohta and S. Yamanaka .................................... 1417

Comment on Ihle, “Towards a quantitative kinetic theory of polar active matter”
E. Bertin, H. Chaté, F. Ginelli, G. Grégoire, S. Léonard and A. Peshkov ................................. 1419

Reply to comment on “Towards a quantitative kinetic theory of polar active matter” by Bertin et al.
T. Ihle ................................................................. 1423

Discussion on Peshkov et al., “Boltzmann-Ginzburg-Landau approach for continuous descriptions of generic Vicsek-like models”
T. Ihle ................................................................. 1427

Comment on Falcke et al., “Polymerization, bending, tension: What happens at the leading edge of motile cells?”
F. Ziebert and I.S. Aranson .................................... 1431

Reply to comment on “Polymerization, bending, tension: What happens at the leading edge of motile cells?” by Falko Ziebert and Igor S. Aranson
M. Falcke and J. Zimmermann .............................. 1433

Comment on Machado et al., “Cytoskeletal turnover and myosin contractility drive cell autonomous oscillations in a model of Drosophila dorsal closure”
T.J.C. Harris and J.J. Feng .................................... 1437
