EXTENDED CONTENTS

Preface | xi
About the Illustrations | xiii
Introduction | xiv

1 User-Centered Design | 1
What Is Design? 1
The Design Process 2
Conducting Research 3
Design Strategies 1.1: Who Is the Client? 8
Defining the Problem 9
Design Strategies 1.2: The Importance of a Good Definition 16
Generating Ideas 16
Developing Designs 21
Evaluating Designs 29
Conclusion 30

2 Providing Mobility in Clothing | 31
Human Body Movement 31
Sensory Aspects of Movement 31
Mechanical Aspects of Movement 34
Describing Body Movement 35
Identifying User Needs for Movement 41
Anatomy and Design 2.1: Skeletal Structure and Glove Mobility 42
Design Strategies 2.1: Participant Observation: the AGNES 44
Notating Movement 45
Analyzing Movement 47
Goniometry 48
Electrogoniometry 49
Motion Capture: Camera-Based Methods 50
3-D Sensor-Based Motion Capture 51
Analyzing how Volume and Shape Affect Movement 53
Applying Data on Body Movement to Clothing Design 54
Examining the Behavior of the Skin during Movement 54
Examining the Expansion of Clothing during Movement 56
Analyzing Wrinkles 58
Increased Mobility in Clothing 59
Fabrics 59
Clothing Design 61
Design Solutions 2.1: Sports Bras 63
Design Strategies 2.2: Adjusting Armscye and Crotch Curves 70
Fit and Movement 70
Sizing Systems and Fit 71
Sizing Standards 74
Methods of Creating Sizing Systems and Pattern Grading 74
Fit Testing 77
Creation of a Sizing System 78
Design Strategies 2.3: Mass Customization and Sizing 79
Analyzing the Effects of Clothing on Movement 80
Conclusion 82
Case Study 2.1 Movement in Pressurized and Positive-Pressure Garments 83
Case Study 2.2 Movement after Injury 87

3 Materials | 89
Textiles 89
Fibers 89
Energy Basics 3.1: Atoms, Molecules, and Energy 93
Extended Contents

Yarns 98
Fabric Structures 98
Fabric Treatments, Finishes, and Composites 106
The Structure of Other Materials Used in Apparel 113
Films 113
Foams 113
Rigid Materials 115
Responsive Fabrics 117
Inherent Material Responses 118
Energy Basics 3.2: Conservation of Energy 119
Conclusion 121
Design Solutions 3.1: Fabric Structure and Protection: Lumberjack Pants 122

4 Smart Clothing and Wearable Technology 123
Electricity and Electrical Systems 123
Power Sources 124
Energy Basics 4.1: Electrical Energy 125
Electrical Circuits 126
Sensors 126
Actuators 128
Processors 128
Interfaces 129
Information in Wearable Technology 129
Wearable Input 130
Body Sensing 132
Design Strategies 4.1: Emotion and Intention 133
Wearable Display 139
Designing Technology for the Wearable Environment 143
Garment- and Textile-Integration of Sensors and Electronic Components 144
Comfort and Accuracy 149
Data, Cognition, and Context Awareness 150
Smart Clothing Design 153
Conclusion 157

5 Thermal Protection 159
Thermal Balance and the Human Body 159
Mechanisms of Heat Transfer 159
Energy Basics 5.1: Electromagnetic Energy: Thermal Radiation 161
Body Responses to the Thermal Environment 162
Exploring Thermal Needs in a Specific Situation 175
Materials for Thermal Protection 176
Thermal Conductivity 176
Air as Insulation 176
Design Strategies 5.1: Principles of Thermal Protection 177
Resilience 179
Reactions to Liquids 180
Treatments for Fibers and Fabrics 180
Clothing Systems for Thermal Protection 184
Keeping Warm 185
Design Solutions 5.1: Inflation: Varying the Depth of the Air Layer 187
Design Solutions 5.2: A Survival Suit for Pilots 189
Anatomy and Design 5.1: The Vascular System and Glove Design 195
Keeping Cool 197
Keeping Dry 201
Describing Thermal Insulation 202
Thermal Testing of Clothing 203
Using Auxiliary Heating and Cooling Systems 205
Case Study 5.1 Keeping Cool: Ensembles for Firefighting 216
Case Study 5.2 Full-Cycle Research: The Cyberia Suit 222
Conclusion 224

6 Impact Protection 225
Impact 226
Principles Governing the Effects of Impact 227
Design Solutions 6.1: Car Seats for Infants and Children 230

Energy Basics 6.1: Impulse and Injury 234

Energy Basics 6.2: Energy Exchange and Impact Protection 235

Anatomy and Design 6.1: Body Segments and Whole Body Impact 236

Impact Theory and Clothing Design 236

Body Tolerance to Impact 237

Impact-Protective Materials 238

- Foams as Impact Protectors 239
- Rigid Materials as Impact Protectors 246
- Textiles in Ballistics Protection 249

Impact-Sensing Materials and Methods 252

- Materials with Switch-Like Properties 252
- Pressure-Sensitive Foams 253
- Sensing Strain, Bend, and Acceleration 253

Design of Impact-Protective Clothing 254

- Design Criteria for Impact Protection 254
- Padding for Sports and Industrial Protection 255
- Keeping Cool in Impact-Protective Garments 266

Case Study 6.1 Protective Equipment for American Football 268

Case Study 6.2 Protective Ensembles for Ordnance Disposal 271

Conclusion 272

Protection of Workers from Radiation Hazards 290

- Radiation 291
- Energy Basics 7.2: Ionizing and Nonionizing Radiation 291
- Energy Basics 7.3: The Results of Radioactive Decay 292
- The Effects of Radiation on the Human Body 294
- Clothing Design for Radiation Hazards 295

Protection from Solid Particles 300

- Filters 301
- Protective Clothing Design for Asbestos Abatement 302
- Design Strategies 7.1: Determining Filter Efficiency 303
- Protective Clothing Design for Cleanrooms 304

Electricity 307

- Electric Shock 307
- Clothing Design for Electrical Utility Workers 308
- Static Electricity 310
- Clothing Design for Problems with Static Electricity 311

Protection from Cuts and Punctures 311

Clothing Design for Flame and Molten Metal Hazards 313

Conclusion 315

8 Enhancing and Augmenting Body Functions | 317

Clothing for Sensory Perception 317

- Visibility 318
- Materials for High Visibility 322
- Clothing Designed for High Visibility 324
- Camouflage 326
- Design Strategies 8.1: Meeting Conflicting Criteria: Visibility for Hunters 329

Clothing for Diving and Water Safety 329

- The Principles of Buoyancy 329
- Designing Life Preservers 330
Extended Contents

Design Solutions 8.1: Children's Life Preservers 333
Buoyancy and Diving 334
Speed Enhancement 336
Clothing for Physical Strength Enhancement 337
Improving Body Efficiency 338
Augmenting Body Power 338
Clothing for Flight and Outer Space 340
Weightlessness 341
Designs for Special Populations 347
Designing Clothing for People with Medical Conditions and Physical Handicaps 348
Designing Clothing for Athletes 349
Designing Clothing for the Military 349
Conclusion 350

9 Commercial Product Development and Production  | 351
Garment Production Methods 351
Stitching 351
Heat Sealing 353
Molding and Heat Shaping 363
Garment Assembly Processes 366
Cut-and-Sewn Processes 366
Full-Fashioned Processes 367
Fastening Systems 367
Fastening System Variables 368
Fastener Options 369
Suspension Systems 375
Location of Garment Closures for Self-Donning and Doffing 381
Anatomy and Design 9.1: The Carrying Angle of the Arm 382
Location of Closures for Assisted Donning and Doffing 386
Creation of Modules 388
Accommodation of Accessories and Braces 390
Fastening Systems for Fitting and Adjustment 391
Fastening Systems for Quick Donning and Doffing 392
Reconfiguration of Garments with Fastening Systems 394
Adaptations and Combinations of Fasteners for Specific End Uses 396
Conclusion 396

Glossary | 397
Bibliography | 407
Index | 417
