Total Mean Curvature and Submanifolds of Finite Type

Second Edition

Bang-Yen Chen
Michigan State University, USA
Contents

Foreword vii
Preface xiii

1. Differentiable Manifolds 1
1.1 Tensors ................................................. 2
1.2 Tensor algebra ........................................ 4
1.3 Exterior algebra ....................................... 5
1.4 Differentiable manifolds ......................... 7
1.5 Vector fields and differential forms .......... 9
1.6 Sard's theorem and Morse's inequalities .... 13
1.7 Lie groups and Lie algebras .................. 15
1.8 Fibre bundles ...................................... 16
1.9 Integration of differential forms ........... 19
1.10 Stokes' theorem .................................... 23
1.11 Homology, cohomology and de Rham's theorem 25
1.12 Frobenius' theorem .............................. 28

2. Riemannian and Pseudo-Riemannian Manifolds 31
2.1 Symmetric bilinear forms and scalar products 32
2.2 Riemannian and pseudo-Riemannian manifolds 33
2.3 Levi-Civita connection ......................... 35
2.4 Parallel transport ................................ 37
2.5 Riemann curvature tensor .................... 41
2.6 Sectional, Ricci and scalar curvatures .... 43
2.7 Indefinite real space forms ................ 46
2.8 Gradient, Hessian and Laplacian ............ 47
2.9 Lie derivative and Killing vector fields .................................. 48
2.10 Weyl conformal curvature tensor ........................................ 50

3. Hodge Theory and Spectral Geometry ........................................ 51
  3.1 Operators $d$, $\ast$ and $\delta$ ........................................ 52
  3.2 Hodge-Laplace operator .................................................. 55
  3.3 Elliptic differential operators ......................................... 57
  3.4 Hodge-de Rham decomposition and its applications .................. 59
  3.5 Heat equation and its fundamental solution .......................... 61
  3.6 Spectra of some important Riemannian manifolds ................. 64
  3.7 Spectra of flat tori ..................................................... 67
  3.8 Heat equation and Jacobi's elliptic functions ....................... 68

4. Submanifolds ............................................................................. 71
  4.1 Cartan-Janet's and Nash's embedding theorems ...................... 72
  4.2 Formulas of Gauss and Weingarten .................................... 74
  4.3 Shape operator of submanifolds .......................................... 78
  4.4 Equations of Gauss, Codazzi and Ricci ............................... 80
  4.5 Fundamental theorems of submanifolds ................................. 84
  4.6 A universal inequality for submanifolds .............................. 84
  4.7 Reduction theorem of Erbacher-Magid ................................. 86
  4.8 Two basic formulas for submanifolds .................................. 88
  4.9 Totally geodesic submanifolds .......................................... 91
  4.10 Parallel submanifolds ..................................................... 92
  4.11 Totally umbilical submanifolds ....................................... 94
  4.12 Pseudo-umbilical submanifolds ....................................... 100
  4.13 Minimal Lorentzian surfaces ........................................... 104
  4.14 Cartan's structure equations ........................................... 112

5. Total Mean Curvature .............................................................. 113
  5.1 Introduction ....................................................................... 113
  5.2 Total absolute curvature of Chern and Lashof ....................... 114
  5.3 Willmore's conjecture and Marques-Neves' theorem .............. 119
  5.4 Total mean curvature and conformal invariants .................... 121
  5.5 Total mean curvature for arbitrary submanifolds ................. 124
  5.6 A variational problem on total mean curvature .................... 132
  5.7 Surfaces in $\mathbb{E}^n$ which are conformally equivalent to flat surfaces .............................................. 140
5.8 Total mean curvatures for surfaces in $\mathbb{E}^4$ 146
5.9 Normal curvature and total mean curvature of surfaces 153

6. Submanifolds of Finite Type 157
6.1 Introduction 157
6.2 Order and type of submanifolds and maps 158
6.3 Minimal polynomial criterion 161
6.4 A variational minimal principle 165
6.5 Finite type immersions of homogeneous spaces 168
6.6 Curves of finite type 170
6.7 Classification of 1-type submanifolds 179
6.8 Submanifolds of finite type in Euclidean space 180
6.9 2-type spherical hypersurfaces 189
6.10 Spherical $k$-type hypersurfaces with $k \geq 3$ 200
6.11 Finite type hypersurfaces in hyperbolic space 204
6.12 2-type spherical surfaces of higher codimension 209

7. Biharmonic Submanifolds and Biharmonic Conjectures 219
7.1 Necessary and sufficient conditions 220
7.2 Biharmonic curves and surfaces in pseudo-Euclidean space 222
7.3 Biharmonic hypersurfaces in pseudo-Euclidean space 231
7.4 Recent developments on biharmonic conjecture 237
7.5 Harmonic, biharmonic and $k$-biharmonic maps 241
7.6 Equations of biharmonic hypersurfaces 245
7.7 Biharmonic submanifolds in sphere 248
7.8 Biharmonic submanifolds in hyperbolic space and generalized biharmonic conjecture 254
7.9 Recent development on generalized biharmonic conjecture 257
7.10 Biminimal immersions 262
7.11 Biconservative immersions 271
7.12 Iterated Laplacian and polyharmonic submanifolds 275

8. $\lambda$-biharmonic and Null 2-type Submanifolds 277
8.1 $(k, \ell, \lambda)$-harmonic maps and submanifolds 277
8.2 Null 2-type hypersurfaces 281
8.3 Null 2-type submanifolds with parallel mean curvature 285
8.4 Null 2-type submanifolds with constant mean curvature 290
8.5 Marginally trapped null 2-type submanifolds 293
Total Mean Curvature and Submanifolds of Finite Type

8.6 $\lambda$-biharmonic submanifolds of $\mathbb{E}^m_p$ .......................... 297
8.7 $\lambda$-biharmonic submanifolds in $H^m$ .......................... 298
8.8 $\lambda$-biharmonic submanifolds in $S^m$ and $S^m_1$ .......................... 302

9. Applications of Finite Type Theory .......................... 305
9.1 Total mean curvature and order of submanifolds .................. 305
9.2 Conformal property of $\lambda_1 \text{vol}(M)$ .................. 309
9.3 Total mean curvature and $\lambda_1, \lambda_2$ .................. 310
9.4 Total mean curvature and circumscribed radii .................. 312
9.5 Spectra of spherical submanifolds .................. 316
9.6 The first standard imbedding of projective spaces .................. 317
9.7 $\lambda_1$ of minimal submanifolds of projective spaces .................. 322
9.8 Further applications to spectral geometry .................. 326
9.9 Application to variational principle: $k$-minimality ............... 328
9.10 Applications to smooth maps .................. 334
9.11 Application to Gauss map via topology .................. 336
9.12 Linearly independence and orthogonal maps .................. 340
9.13 Adjoint hyperquadrics and orthogonal immersions ............... 344
9.14 Submanifolds satisfying $\Delta \phi = A\phi + B$ .................. 348
9.15 Submanifolds of restricted type .................. 350

10. Additional Topics in Finite Type Theory .......................... 357
10.1 Pointwise finite type maps .................. 357
10.2 Submanifolds with finite type Gauss map .................. 359
10.3 Submanifolds with pointwise 1-type Gauss map .................. 368
10.4 Submanifolds with finite type spherical Gauss map .................. 374
10.5 Finite type submanifolds in Sasakian manifolds .................. 376
10.6 Legendre submanifolds satisfying $\Delta H_\phi = \lambda H_\phi$ .................. 382
10.7 Geometry of tensor product immersions .................. 387
10.8 Finite type quadric and cubic representations .................. 394
10.9 Finite type submanifolds of complex projective space ............... 401
10.10 Finite type submanifolds of complex hyperbolic space ............... 409
10.11 Finite type submanifolds of real hyperbolic space ............... 411
10.12 $L_r$ finite type hypersurfaces .................. 413

Bibliography .......................... 421
Subject Index .......................... 451
Author Index .......................... 461
