*Preface*  
page xiii

1 Introduction: the need for a quantum theory  
1.1 Introducing quantum mechanics  

2 Experimental foundations of quantum theory  
2.1 Black-body radiation  
2.1.1 Kirchhoff laws  
2.1.2 Electromagnetic field in a hollow cavity  
2.1.3 Stefan and displacement laws  
2.1.4 Planck model  
2.1.5 Contributions of Einstein  
2.1.6 Dynamic equilibrium of the radiation field  
2.2 Photoelectric effect  
2.2.1 Classical model  
2.2.2 Quantum theory of the effect  
2.3 Compton effect  
2.3.1 Thomson scattering  
2.4 Particle-like behaviour and the Heisenberg picture  
2.4.1 Atomic spectra and the Bohr hypotheses  
2.5 Corpuscular character: the experiment of Franck and Hertz  
2.6 Wave-like behaviour and the Bragg experiment  
2.6.1 Connection between the wave picture and the discrete-level picture  
2.7 Experiment of Davisson and Germer  
2.8 Interference phenomena among material particles  
Appendix 2.A Classical electrodynamics and the Planck formula  

3 Waves and particles  
3.1 Waves: d'Alembert equation  
3.2 Particles: Hamiltonian equations  
3.2.1 Poisson brackets among velocity components for a charged particle  
3.3 Homogeneous linear differential operators and equations of motion  
3.4 Symmetries and conservation laws

10 Symmetries in quantum mechanics
10.1 Meaning of symmetries
  10.1.1 Transformations that preserve the description
10.2 Transformations of frames and corresponding quantum symmetries
  10.2.1 Rototranslations
10.3 Galilei transformations
10.4 Time translation
10.5 Spatial reflection
10.6 Time reversal
10.7 Problems

11 Approximation methods
11A Perturbation theory
  11A.1 Approximation of eigenvalues and eigenvectors
  11A.2 Hellmann–Feynman theorem
  11A.3 Virial theorem
  11A.4 Anharmonic oscillator
  11A.5 Secular equation for problems with degeneracy
  11A.6 Stark effect
  11A.7 Zeeman effect
  11A.8 Anomalous Zeeman effect
  11A.9 Relativistic corrections ($\alpha^2$) to the hydrogen atom
  11A.10 Variational method
  11A.11 Time-dependent formalism
  11A.12 Harmonic perturbations
  11A.13 Fermi golden rule
  11A.14 Towards limiting cases of time-dependent theory
  11A.15 Adiabatic switch on and off of the perturbation
  11A.16 Perturbation suddenly switched on
  11A.17 Two-level system
  11A.18 The quantum $K^0-K^0$ system
  11A.19 The quantum system of three active neutrinos

11B Jeffreys–Wentzel–Kramers–Brillouin method
  11B.1 The JWKB method
  11B.2 Potential barrier
  11B.3 Energy levels in a potential well
  11B.4 $\alpha$-decay

11C Scattering theory
  11C.1 Aims and problems of quantum scattering theory
  11C.2 Time-dependent scattering
  11C.3 An example: classical scattering
## Contents

### 11C.4 Time-independent scattering
- 11C.4.1 One-dimensional stationary description of scattering 287

### 11C.5 Integral equation for scattering problems 289

### 11C.6 The Born series 293

### 11C.7 Partial wave expansion 295

### 11C.8 $s$-Wave scattering states in the square-well potential 298

### 11C.9 Problems 299

### 12 Modern pictures of quantum mechanics 301
- 12.1 Quantum mechanics on phase space 301
- 12.2 Representations of the group algebra 304
- 12.3 Moyal brackets 308
- 12.4 Tomographic picture: preliminaries 309
- 12.5 Tomographic picture 311
  - 12.5.1 Classical tomography 312
  - 12.5.2 Quantum tomography 313
- 12.6 Pictures of quantum mechanics for a two-level system 315
  - 12.6.1 von Neumann picture 317
  - 12.6.2 Heisenberg picture 319
  - 12.6.3 Unitary group $U(2)$ 320
  - 12.6.4 A closer look at states in the Heisenberg picture 321
  - 12.6.5 Weyl picture 322
  - 12.6.6 Probability distributions and states 324
  - 12.6.7 Ehrenfest picture 325
- 12.7 Composite systems 329
  - 12.7.1 Inner product in tensor spaces 330
  - 12.7.2 Complex linear operators in tensor spaces 330
  - 12.7.3 Composite systems and Kronecker products 331
- 12.8 Identical particles 332
  - 12.8.1 Product basis 332
  - 12.8.2 Exchange symmetry 333
  - 12.8.3 Exchange interaction 334
  - 12.8.4 Two-electron atoms 335
- 12.9 Generalized paraFermi and paraBose oscillators 337
- 12.10 Problems 337

### 13 Formulations of quantum mechanics and their physical implications 339
- 13.1 Towards an overall view 339
- 13.2 From Schrödinger to Feynman 339
  - 13.2.1 Remarks on the Feynman approach 341
- 13.3 Path integral for systems interacting with an electromagnetic field 344
- 13.4 Unification of quantum theory and special relativity 346
- 13.5 Dualities: quantum mechanics leads to new fundamental symmetries 351
## 14 Exam problems

14.1 End-of-year written exams

## 15 Definitions of geometric concepts

15.1 Outline
15.2 Groups
15.3 Lie groups
15.4 Symmetry
15.5 Various definitions of vector fields
15.6 Covariant vectors and 1-form fields
15.7 Lie algebras
15.8 Lie derivatives
15.9 Symplectic vector spaces
15.10 Homotopy maps and simply connected spaces
  15.10.1 Examples of spaces which are or are not simply connected
15.11 Diffeomorphisms of manifolds
15.12 Foliations of manifolds
