Proceedings of the ASME

JOINT RAIL CONFERENCE – 2014 –

RAILROAD INFRASTRUCTURE ENGINEERING
RAIL EQUIPMENT ENGINEERING
SIGNAL AND TRAIN CONTROL ENGINEERING
SERVICE QUALITY AND OPERATIONS RESEARCH
PLANNING AND DEVELOPMENT
SAFETY AND SECURITY
ENERGY EFFICIENCY AND SUSTAINABILITY
URBAN PASSENGER RAIL TRANSPORT
ELECTRIFICATION

presented at
ASME 2014 JOINT RAIL CONFERENCE
APRIL 2–4, 2014
COLORADO SPRINGS, COLORADO, USA

sponsored by
THE TRANSPORTATION DIVISION, ASME

A S M E
Two Park Avenue * New York, N.Y. 10016
CONTENTS

RAILROAD INFRASTRUCTURE ENGINEERING

JRC2014-3706 ................................................................. V001T01A001
Engineering Studies on Joint Bar Integrity: Part I — Field Surveys and Observed Failure Modes
David Y. Jeong, Radim Bruzek, and Ali Tajaddini

JRC2014-3708 ................................................................. V001T01A002
Engineering Studies on Joint Bar Integrity: Part II — Finite Element Analyses
Michael E. Carolan, David Y. Jeong, and A. Benjamin Perlman

JRC2014-3714 ................................................................. V001T01A003
Ballast Direct Shear Testing
Timothy D. Stark, Robert H. Swan, Jr. and Zehong Yuan

JRC2014-3727 ................................................................. V001T01A004
Experimental Study on the Stiffness Degradation of Railroad Ballast Subjected to Clay Fouling
Corrie Walton-Macaulay, L. Sebastian Bryson, and Kyle J. Guenther

JRC2014-3735 ................................................................. V001T01A005
Field Testing of Prototype Systems for the Non-Destructive Measurement of the Neutral Temperature of Railroad Tracks
Robert Phillips, Francesco Lanza di Scalea, Claudio Nucera, Mahmood Fateh, and John Choros

JRC2014-3736 ................................................................. V001T01A006
Ultrasonic Tomography for Rail Flaw Imaging
Robert Phillips, Francesco Lanza di Scalea, Claudio Nucera, Piervincenzo Rizzo, and Leith Al-Nazer

JRC2014-3739 ................................................................. V001T01A007
Lateral Impact of Railroad Bridges With Hybrid Composite Beams: Finite Element Modeling and Preliminary Dynamic Behavior Study of HCB
Yuan Jing, Z. John Ma, Richard M. Bennett, and David B. Clarke

JRC2014-3745 ................................................................. V001T01A008
High Speed Non-Contact Ultrasonic Guided Wave Inspections of Rails
Stefano Mariani, Thompson V. Nguyen, Francesco Lanza di Scalea, and Mahmood Fateh

JRC2014-3746 ................................................................. V001T01A009
Advances in Bonded Insulated Rail Joints to Improve Product Performance
Korhan Ciloglu, Peter C. Frye, Scott Almes, and Sidney Shue

JRC2014-3752 ................................................................. V001T01A010
KENTRACK 4.0: A Railway Trackbed Structural Design Program
Jerry G. Rose, Shushu Liu, and Reginald R. Souleyrette

JRC2014-3754 ................................................................. V001T01A011
Analysis of the Lateral Load Path in Concrete Crosstie Fastening Systems
Brent Williams, J. Riley Edwards, Ryan G. Kernes, and Christopher P. L. Barkan
Spectrum Analysis of Railroad Track With Hanging Tie Problem
Yin Gao and Hai Huang

Rehabilitation, Assessment and Management Practices to Ensure Long-Life, High Performance Highway-Railway At-Grade Crossings
Brett Malloy, Jerry G. Rose, and Reginald R. Souleyrette

Rail Temperature Prediction Model and Heat Slow Order Management
Radim Bruzek, Larry Biess, Leopold Kreisel, and Leith Al-Nazer

Coupling the “Sandwich” Track Model to a Commercial Dynamic Vehicle Model
Shelby Stigers, Yin Gao, and Hai Huang

Analysis of the Relationship Between Rail Seat Load Distribution and Rail Seat Deterioration in Concrete Crossties
Matthew Greve, Marcus S. Dersch, J. Riley Edwards, Christopher P. L. Barkan, Jose Mediavilla, and Brent M. Wilson

Seismic Surface Wave Testing for Track Substructure Assessment
Timothy D. Stark, Thomas J. Dehlin, Soheil Nazarian, Hoda Azari, Deren Yuan, and Carlton L. Ho

Rail Highway Grade Crossing Roughness Quantitative Measurement Using 3D Technology
Teng (Alex) Wang, Reginald R. Souleyrette, Daniel Lau, and Peng Xu

Surface Wave Testing for Characterization of Ballast and Foundation Layers
Hoda Azari, Deren Yuan, Soheil Nazarian, Timothy D. Stark, Carlton L. Ho, and Thomas J. Dehlin

Laboratory and Field Investigation of the Rail Pad Assembly Mechanistic Behavior
Thiago B. do Carmo, J. Riley Edwards, Ryan G. Kernes, Bassem O. Andrawes, and Chris P. L. Barkan

Prestressing Steel Reinforcement Wire Measurement Protocol
Mark Haynes, Chih-Hang John Wu, Robert J. Peterman, and B. Terry Beck

Effects of Ballast Degradation on Permanent Deformation Behavior From Large-Scale Triaxial Tests
Yu Qian, Erol Tutumluer, Youssef M. A. Hashash, and Jamshid Ghaboussi

Low Solar Absorption Coating for Reducing Rail Temperature
Hao Wang, Jiaqi Chen, P. N. Balaguru, and Leith Al-Nazer
Reliable Transfer Length Assessment for Real-Time Monitoring of Railroad Crosstie Production

Weixin Zhao, B. Terry Beck, Robert J. Peterman, Chih-Hang John Wu,
Naga Narendra B. Bodapati, and Grace Lee

Vertical Load Path Under Static and Dynamic Loads in Concrete Crosstie and Fastening Systems

Kartik R. Manda, Marcus Dersch, Ryan Kernes, J. Riley Edwards, and David A. Lange

Tensioned Pullout Test Used to Investigate Wire Splitting Propensity in Concrete Railroad Ties

Joseph R. Holste, Mark Haynes, Robert J. Peterman, B. Terry Beck, and Chih-Hang John Wu

Gauging of Concrete Crossties to Investigate Load Path in Laboratory and Field Testing

Sihang Wei, Daniel A. Kuchma, J. Riley Edwards, Marcus S. Dersch, and Ryan G. Kernes

Effect of Concrete Properties on Transfer Lengths in Concrete Rail-Road Ties

Naga Narendra B. Bodapati, Robert J. Peterman, B. Terry Beck, and Chih-Hang John Wu

On the Development and Implementation of Scalable Models of Long Tracks for the Rapid Computation of Transient Response and Dynamic Interaction of Train-Track Systems Due to High Speed and Freight Train Traffic

L. Leon and D. C. Rizos

Studies on the Accuracy Stability and Efficiency of a New Time Integration Scheme for Ballast Modeling Using the Discrete Element Method

G. F. Mathews, IV, R. L. Mullen, and D. C. Rizos

Development of a Bogie-Mounted Vehicle On-Board Weighing System

Dan Maraini, Parham Shahidi, Brad M. Hopkins, and Andrew Seidel

Lateral Instability Detection

Parham Shahidi, Brad M. Hopkins, Dan Maraini, and Andrew Seidel

Design Concepts for the Next Generation of High-Speed Diesel-Electric Locomotives

John Tunna, Jingjun Zhang, and Adrian Gorski

A Study on a Multiple Film Technique Utilized in Radiographic Examination for Steel Castings With Complicated Geometry

Zhijun Ao, Leon Li, and Zunfa Wei
Risk Based Broken Rail Detection on Railways

David F. Thurston

Communication Based Train Control Technology Selection

Dave Keevill

Assessment of Broken Rail Protection in Audio Frequency Track Circuits

Joseph W. Schaad

CBTC Equipment EMC Qualification Testing

Neil Glennie

HTN Mote: A Hardware Platform for Wireless Real-Time Railcar Monitoring and its Performance Analysis

Sushanta Mohan Rakshit, Michael Hempel, Pradhunna Shrestha, Fahimeh Rezaei, Hamid Sharif, John Punwani, and Monique Stewart

Applying Reliability and Availability Methods to Communication Based Train Control

Kenneth M. Diemunsch and Gopala Muthukrishnan

Product-Based Safety Verification Using Formal Methods

Sofia K. Georgiadis

Improving Resiliency in Communications Systems in Public Transit After Severe Weather Events

Michael Fitzmaurice

Benefits of Using Modern Axle Counters in CBTC and Light Rail Projects

Gerhard Grundnig and Christian Pucher

Providing Network Resilience for Safety Critical Systems

Arash Aziminejad and Andrew W. Lee

Secure Communication-Based Train Control: Performance Evaluation of a Design Framework

Arash Aziminejad and Mustafa Seckin

An Extended Model of Light Railway System Used in Analysis of Normal Operation and Fault Conditions

Sorin Deleanu, Keith Forman, David C. Carpenter, and Cail Munteanu
Techniques for Evaluating and Improving the Operational Efficiency of Positive Train Control Braking Enforcement Algorithms

Joe Brosseau

Positive Train Control System Testing

Scott Gage, Alan Polivka, Shad Pate, and W. Dave Mauger

SERVICE QUALITY AND OPERATIONS RESEARCH

A Heuristic Approach to Train Dispatch Planning

Plinio R. S. Vilela, Luciano M. Christofoletti, Rafael L. Dias, and Anderson P. Vieira

Locomotive Assignment Under Consist Busting and Maintenance Constraints

Brigitte Jaumard, Huaining Tian, and Peter Finnie

Heavy Haul Train Simulation of Air Brake System and Longitudinal Dynamics

Wei Wei, Mehdi Ahmadian, and Jun Zhang

Evaluation of Single Track Timetables Using Simulation

Hans Sipilä

Siding Spacing and the Incremental Capacity of the Transition From Single to Double Track

Ivan Atanassov, C. Tyler Dick, and Christopher P. L. Barkan

Advancing the Science of Yard Design and Operations With the CSX Hump Yard Simulation System

C. Tyler Dick and Jeremiah R. Dirnberger

Deadlock Avoidance and Detection in Railway Simulation Systems

Bertrand Simon, Brigitte Jaumard, and Thai Hoa Le

PLANNING AND DEVELOPMENT

Train Planning on a Single Track Shared-Use Passenger and Freight Corridor With Demand Considerations

Ahmadreza Talebian and Bo Zou

FRA Autonomous Track Geometry Measurement System Technology Development: Past, Present, and Future

Soheil Saadat, Cameron Stuart, Gary Carr, and James Payne
SAFETY AND SECURITY

JRC2014-3703........................................................................................................... V001T06A001
Rail Defect Detection Using Data From Tri-Axial Accelerometers
Tariq Abuhamdia, Saied Taheri, Abe Meddah, and David Davis

JRC2014-3713........................................................................................................... V001T06A002
Empirical Modeling of a Rail Tank Car for Struck Coupler Force Estimation
Brad M. Hopkins, Dan Maraini, Andrew Seidel, and Parham Shahidi

JRC2014-3729........................................................................................................... V001T06A003
A Multi-Sensor Approach for Early Detection and Notification of Approaching Trains
Pradhumna Lal Shrestha, Michael Hempel, Jose Santos, and Hamid Sharif

JRC2014-3730........................................................................................................... V001T06A004
A Composite Risk Model for Railroad Operations Utilizing Positive Train Control (PTC)
Andre’ Abadie, Damindra Bandara, and Duminda Wijesekera

JRC2014-3744........................................................................................................... V001T06A005
Effect of Dynamic Envelope Pavement Markings on Vehicle Driver Behavior at a
Highway-Rail Grade Crossing
Scott Gabree, Stephanie Chase, and Marco daSilva

JRC2014-3765........................................................................................................... V001T06A006
Analysis and Development of Performance-Based Requirements for Railroad Tank Cars
Steven W. Kirkpatrick, Robert A. MacNeill, and Francisco Gonzalez, III

JRC2014-3773........................................................................................................... V001T06A007
Semi-Quantitative Risk Assessment of Adjacent Track Accidents on Shared-Use Rail Corridors
Chen-Yu Lin and Mohd Rapik Saat

JRC2014-3780........................................................................................................... V001T06A008
Freight Railroads Adjacent to High-Speed Rail: Assessing the Risk
John Cockle

JRC2014-3808........................................................................................................... V001T06A009
Low-Cost Railway Level Crossings: Breaking Down the Barriers
Christian Wullems and Anjum Naweed

JRC2014-3811........................................................................................................... V001T06A010
Video Analytics for the Detection of Near-Miss Incidents on Approach to Railway
Level Crossings
Sina Aminmansour, Frederic Maire, and Christian Wullems

JRC2014-3822........................................................................................................... V001T06A011
Analysis of Roadway Worker Injuries and Fatalities at FRA and FTA-Regulated Railroads
Dave Schlesinger

JRC2014-3823........................................................................................................... V001T06A012
Technology and High Reliability Organizations in Railroad Operations Safety:
A Case Study of Metrolink/SCRRA and Positive Train Control (PTC) Implementation
Greg Placencia, Najmedin Meshkati, James Moore, II, and Yalda Khashe
