CONTENTS

Preface xi
Introduction to Volume 9: Enabling Technologies for Organic Synthesis xiii

VOLUME 9 Enabling Technologies for Organic Synthesis

9.01 Enabling Technologies in High Throughput Chemistry
   I Aubé, SA Rogers, and C Santini
   1

9.02 High-Throughput Analysis for High-Throughput Experimentation in Organic Chemistry
   WSchafer, X Bu, X Gong, LA Joyce, and CJ Welch
   28

   S Born, E O’Neal, and KF Jensen
   54

9.04 Microcapillary Catalysis
   O Trapp
   94

9.05 Technology-Enabled Synthesis of Carbohydrates
   NL Snyder, PH Seeberger, GT Mukosera, and EMK Held
   111

9.06 The Use of Preparative Chiral Chromatography for Accessing Enantiopurity in Pharmaceutical Discovery and Development
   CJ Welch
   143

9.07 High-Throughput Purification in Support of Pharmaceutical Discovery
   R McClain and E Streckfuss
   160

9.08 Use of Industrial Scale Chromatography in Pharmaceutical Manufacturing
   O Dapremont
   181

9.09 High-Throughput Screening to Enable Salt and Polymorph Screening, Chemical Purification, and Chiral Resolution
   NVariantkavai, M McNevin, S Shultz, and S Traska
   207

9.10 Organic Synthesis Using Microwave Heating
   NE Leadbeater
   234

9.11 Useful Chemical Activation Alternatives in Solvent-Free Organic Reactions
   JG Hernández, CG Avila-Ortiz, and E Juaristi
   287

9.12 Fluorous Linker-Enabled Organic Synthesis
   W Zhang
   315

9.13 Organic Photochemistry
   CG Bochet
   330

9.14 Preparative Electrochemistry for Organic Synthesis
   GG Botte, DA Daramola, and M Muthuvel
   351

9.15 Synthetic Biology Approaches for Organic Synthesis
   PS Coelho, FH Arnold, and JC Lewis
   390

9.16 Enzyme Evolution as a Tool for Creating Improved Catalysts for Large-Scale Organic Synthesis
   GW Huisman
   421
9.17 Chemistry of Antibody–Small Molecule Drug Conjugates
   RM Garbaccio

9.18 Post-Synthetic Chemical Functionalization of Oligonucleotides
   Yu Yuan and Weimin Wang
