# TABLE OF CONTENTS

Scalable Ramp-up of Hybrid Manufacturing Systems .......................................................... 1
Isabel Basse, Alexander Sauer, Robert Schmitt

Greedy Heuristics for Distributed Job Shop Problems .................................................. 7
Ahmed Azab, B. Naderi

Complexity Management for the Start-up in Lithium-ion Cell Production ........................... 13
Markus Westermier, Gunther Reinhart, Matthias Steber

Methodical Approach for Consideration of Ramp-up Risks in the Product Development of Complex Products ........................................................................................................... 20
Steffen Elstner, Dieter Krause

Execution of Ramp-up Projects in Day-to-Day Operations through a Quantitative Risk Management Approach .................................................................................................................. 26
Johann Philipp von Cube, Robert Schmitt

Ramp-up Management as an Approach to Mitigating Instability in the Adaptation of Solution Spaces in High-Variety Business Environments ........................................................................ 32
Frank Steiner

Identifying Preferable Product Variants Using Similarity Analysis ........................................ 38
Günther Schuh, Michael Riesener, Stefan Rudolf

Risk Profiles for the Pre-series Logistics in Automotive Ramp-up Processes ........................... 44
Patrick Filla, Katja Klingebiel

A Variable Neighborhood Search Metaheuristic for Cellular Manufacturing with Multitask Machine Tools ......................................................................................................................... 50
Ahmed Azab, B. Naderi

Technological Capital: A Criterion of Innovative Development and an Object of Transfer in the Modern Economy ..................................................................................................................... 56
Sergey N. Grigoriev, Julia Y. Yeleneva, Alexey A. Golovenchenko, Vladimir N. Andreyev

Efficient Collision Avoidance for Industrial Manipulators with Overlapping Workspaces .......................................................... 62
Philipp Ennen, Daniel Ewert, Daniel Schilberg, Sabina Jeschke

A Game-based Approach to Understand Human Factors in Supply Chains and Quality Management .......................................................................................................................... 67
Sebastian Stiller, Björn Falk, Ralf Philipsen, Philipp Brauner, Robert Schmitt, Martina Ziefe

Increasing Ramp-up Performance By Implementing the Gamification Approach ...................... 74
Achim Kampker, Christoph Deutskens, Karl Deutschmann, Andreas Maue, Andreas Haunreiter

Interrelationships between Product Quality and Different Demand Cases in Ramp-up Scenarios ......................................................................................................................... 81
Matthias Blum, Simone Runge, Marcel Groten, Sebastian Stiller

On the Importance of Mediating Dynamic Capabilities for Ambidextrous Organizations .......... 85
Ruth Jiang, Sebastian Kortmann

Solution Principles for Managing Instabilities in Ramp-up ................................................ 93
Isabel Basse, Sebastian Schmitt, Thomas Gartzen, Robert Schmitt

Setup and Maintenance of Manufacturing Quality in CO₂ Laser Cutting .................................. 98
Ulrich Thomassen, Torsten Hermanns, Stoyan Sloyanov

A STEP-compliant Method for Manufacturing Knowledge Capture .................................... 103

Integrated Product and Process Development: Modular Production Architectures based on Process Requirements ....................................................................................................................... 109
Achim Kampker, Peter Burggraf, Christoph Deutskens, Andreas Maue, Ruben Fürstmann

The Effect of a Structured Method on Mental Model Accuracy in Complex Decision Making .......................................................................................................................... 115
Peter Bußwolder

Development of Modular Product Architectures ........................................................................ 120
G. Schuh, S. Rudolf, T. Vogels

A New Framework to Evaluate the Process Capability of Production Technologies during Production Ramp-Up .................................................................................................................. 126
Jens Stauder, Steffen Buchholz, Fritz Klocke, Patrick Mattfeld
