SIMUL 2014

The Sixth International Conference on Advances in System Simulation

October 12 - 16, 2014

Nice, France

SIMUL 2014 Editors

Amr Arisha, College of Business, DIT, Ireland

Georgiy Bobashev, RTI International -Research Triangle Park, USA
# TABLE OF CONTENTS

## SIMUL 1: TRANSPORT SIMULATION

Model of Running Time Disturbances for Buses Using Designated Lanes on Approaches to Junctions Equipped with Traffic Signals ............................................................................................................. 1  
M. Bauer

Traffic-Light Cycle Coordinated by Microsimulation: A Solution to the Traffic Congestion in Palermo .......................................................................................................................... 7  
G. Salvo, L. Sanfilippo

Towards a Hybrid Real/Virtual Simulation of Autonomous Vehicles for Critical Scenarios .................................................. 14  
F. Gechter, B. Dafflon, P. Gruer, A. Koukam

Modelling Drivers’ Route Choice Behaviour through Possibility Theory Using Driving Simulator ........................................... 18  
M. Marinelli, M. Dell’Orco

## SIMUL 2: SIMULATION TOOLS AND PLATFORMS

M2ANET Simulation in 3D in NS2 ........................................................................................................ 24  
N. Mahmood, J. DeDourek, P. Pochec

Pandora: A Versatile Agent-Based Modelling Platform for Social Simulation ................................................................. 29  
X. Rubio-Campillo

Interface-Based Semi-Automated Generation of Scenarios for Simulation Testing of Software Components .......................................................................................................................... 35  
T. Potuzak, R. Lipka

A Scalable Framework for Advanced Driver Assistance Systems Simulation ................................................................................. 43  
K. Abdelgawad, M. Abdelkarim, B. Hassan, M. Grafe, I. Grabler

## SIMUL 3: SIMULATION MODES I

Microscopic Simulation of Synchronized Flow in City Traffic: Effect of Driver’s Speed Adaptation ........................................ 52  
G. Hermanns, I. Kulkov, B. Kerner, M. Schreckenberg, P. Hemmerle, M. Koller, H. Rehborn

An Optimal Multiobjective Production System: A Case Study ............................................................................................... 58  
H. Gonzalez, M. Campana

A Generalized Agent-Based Model to Simulate Emergency Departments .................................................................................. 65  
Z. Liu, E. Cabrera, D. Rexachs, E. Luque

IoT Component Design and Implementation using Discrete Event Specification Simulations ....................................................... 71  
S. Sehili, L. Capocchi, J. Santucci

## SIMUL 4: SIMULATION MODES II

Optimization of Resources to Improve Patient Experience in the New Emergency Department of Mater Hospital Dublin .................................................................................................................. 77  
H. Habib, W. Abo-Hamad, A. Arisha

Modeling the Contact Propagation of Nosocomial Infection in Hospital Emergency Departments ........................................... 84  
C. Jaramillo, D. Rexachs, E. Luque, F. Epelde, M. Taboada

Impedance-Based Higher Order Sliding Mode Control for Grasping and Manipulation .......................................................... 90  
R. Hasan, R. Vepa, H. Shaheed

## SIMUL 5: HUMAN-IN SIMULATION

Towards a New Alternative to Assess the Validity of Driving Simulators: The Concept of Presence ......................................... 97  
C. Deniaud, V. Honnet, B. Jeanné, D. Mestre

Consistency of the Stochastic Mesh Method ................................................................................................................................. 103  
Y. Kashtanov
Multiple Convolution Neural Networks for an Online Handwriting Recognition System ............................................... 108
P. Dung

The Influence of Lateral, Roll Yaw Motion Gains on Driving Performance on an Advanced Dynamic Simulator ................................................................. 113

SIMUL 6: BUILDING SIMULATION

Different User Behavior's Impact on Simulated Heating Demand in Energy Efficient Buildings ................................. 120
H. Bagge, D. Johansson

Rare Event Handling in Signalling Cascades ................................................................................................. 126
B. Barbou, S. Haddad, C. Picaronny, M. Heiner

Program Generation Approach to Semi-Natural Simulators Design and Implementation ........................................ 132
E. Markov, V. Gueorguiev, I. Ivanov

Semi-Automated Generation of Simulated Software Components for Simulation Testing ................................................. 140
T. Potuzak, R. Lipka

Energy and Daylighting Performance of Senior Housing: Performance Evaluation of a Senior Apartment in China .......................................................... 150
Y. Fang, S. Cho

SIMUL 7: MODEL-BASED SYSTEM PREDICTION

Thickness Reduction Controller Design for Flying Gauge Change in a Cold Strip Mill ............................................... 156
T. Ogasahara

Application of the Butler–Volmer Equation in Mathematical Modelling of Amperometric Biosensor ........................ 162
D. Simelevicius, K. Petrauskas

Concept for Geopolitical Crisis Simulation as Assistance During a Decision Making Process ............................. 168
M. Epp, A. Brahmann, U. Chalupka, O. Kroning, H. Rothe

Probabilistic Prognosis of Societal Political Violence by Stochastic Simulation: Using Principal Component Analysis and Support Vector Machines .................................................. 172
A. Brahmann, U. Chalupka, H. Rothe, T. Albrecht

SIMUL 8: PRACTICAL APPLICATIONS OF PROCESS SIMULATIONS I

Simulation Analysis for Performance Improvements of GNSS-Based Positioning in a Road Environment ................................................................. 178
N. Kim, C. Park, S. Jung

Online Heat Pattern Estimation in a Shaft Furnace by Particle Filter Logic ......................................................... 183
Y. Hashimoto, K. Tsuda

Weights Decision Analysis on the Integration of Navigation Satellite System and Vision System for Precise Positioning ......................................................................... 189
C. Park, N. Kim

Production-Sales Policies for New Product Diffusion under Stochastic Supply ............................................. 197
A. Negahban, J. Smith

SIMUL 9: PRACTICAL APPLICATIONS OF PROCESS SIMULATIONS II

Particle Simulation of Granular Flows in Electrostatic Separation Processes ......................................................... 203
I. Critelli, A. Tasora, A. Degiorgi, M. Colledani

Simulation as a Sensor of Emergency Departments: Providing Data for Knowledge Discovery: Work-in-Progress Paper ........................................................................ 209
E. Bruballia, M. Tobaoda, E. Cabrerra, D. Rexachs, E. Luque

Social Sustainability and Manufacturing Simulation: Defining Social Criteria for a Holistic Sustainability Simulation Approach in Manufacturing Companies .................................................. 213
A. Widok, V. Wohlgemuth

An Agent-Based Financial Market Simulator for Evaluation of Algorithmic Trading Strategies .................................. 221
R. Hu, S. Watt
SIMUL 10: SIMULATION METHODOLOGIES I

Simulation-Based Completeness Analysis and Adaption of Fault Trees .......................................................... 228
  V. Gollucke, J. Pinkowski, C. Lasche, S. Gerwinn

Investigation of Solver Technologies for the Simulation of Brittle Materials: Using the Example of Bullet-Proof Glass ................................................................. 236
  A. Ramezani, H. Rothe

Improving Simulators Quality Using Model and Data Validation Techniques: Industrial Project Examples ................................................................. 243
  V. Gueorguiev

Fuzzy Discrete-Event Systems Modeling and Simulation with Fuzzy Control Language and DEVS Formalism ................................................................. 250
  J. Santucci, L. Capocchi

Integrating Simulation Modelling and Value Stream Mapping for Leaner Capacity Planning of an Emergency Department ................................................................. 256
  E. Swallmeh, A. Tobail, W. Abo-Hamad, J. Gray, A. Arisha

SIMUL 11: SIMULATION METHODOLOGIES II

Model-Based Method to Achieve EMC for Distributed Safety-Relevant Automotive Systems ................................................................. 263
  A. Baumgart, K. Hormaier, G. Deiter

Agent-Based Simulation of Information and Communications Technology Practicum Courses for Engineering Students at Instituto Tecnologico Metropolitanano ................................................................. 271
  J. Castillo, C. Gallego, Y. Ceballos, C. Zapata

A Unified Framework for Uncertainty and Sensitivity Analysis of Computational Models with Many Input Parameters ................................................................. 276
  L. Gu, C. Wu

An Agent-Based Model to Support Measuring Drug Choice and Switch Between ................................................................. 281
  G. Bobashev, E. Solano, L. Hoffer
