

HIGH-RESOLUTION IMAGING

DETECTORS AND APPLICATIONS

Swapan K. Saha

PAN STANFORD  PUBLISHING

Contents

<i>Preface</i>	xvii
<i>Principal Symbols</i>	xxi
<i>List of Acronyms</i>	xxix
1 Properties of Radiation	1
1.1 Preamble	1
1.1.1 Planck's Law	11
1.1.2 Stefan-Boltzmann's Law	15
1.1.3 Effective Temperature of a Star	17
1.1.4 Wien's Law	20
1.1.5 Color Temperature	21
1.1.6 Electromagnetic Spectrum	25
1.2 Light Intensity	29
1.2.1 Radiometry	30
1.2.2 Photometry	35
1.2.3 Lambert's Cosine Law	37
1.3 Opto-Electronic System Theory	38
1.3.1 Linear System	39
1.3.2 Transfer Functions of Optical and Opto-Electronics Systems	43
1.4 Image Formation	45
1.4.1 Electro-Optical System	48
1.4.2 Photographic Film	50
1.5 Effects of Atmosphere on the Star Images	51
1.5.1 Absorption	52
1.5.2 Scattering	55
1.5.3 Atmospheric Turbulence	57
1.5.4 Resolving Power of a Telescope	63

1.5.5	Passive Approach to Get over Turbulence Effect	67
1.5.6	Real-Time Correction Technique	72
1.5.6.1	Greenwood frequency	73
1.5.6.2	Adaptive optics system	74
2	Photoelectric Concept	79
2.1	Photoelectric Effect	79
2.2	A Brief Account of Semiconductors	84
2.2.1	Crystal Structure	85
2.2.1.1	Crystal lattice	85
2.2.1.2	Arrangements of space lattice	88
2.2.2	Crystal Defects	89
2.2.2.1	Point defects	90
2.2.2.2	Line defects	92
2.2.2.3	Planar (surface) defects	93
2.2.2.4	Bulk (or volume) defects	94
2.2.3	Energy Bands in Semiconductor	95
2.2.3.1	Bandgap energy	96
2.2.3.2	Periodic potentials	98
2.2.4	Electrical Properties of Semiconductors	101
2.2.4.1	Electron-hole pairs	103
2.2.4.2	Drift current	105
2.2.4.3	Diffusion current	106
2.2.4.4	Mobile charge carrier	107
2.2.5	Electron Distribution in Semiconductors	107
2.2.6	Semiconductor Materials	110
2.2.6.1	Intrinsic semiconductor	110
2.2.6.2	Extrinsic semiconductor	112
2.2.7	Diode	113
2.2.8	Transistor	120
2.2.9	Field-Effect Transistor	125
2.3	Integrated Circuits Technology	128
2.3.1	Fabrication of ICs	128
2.3.1.1	Processing steps	129
2.3.1.2	Types of junction	132
2.3.2	Metal-Oxide Semiconductor Structure	134
2.3.3	Metal-Oxide Semiconductor FET	138
2.4	Operational Amplifier	141

3	Concept of Laser	145
3.1	Introduction	145
3.2	Main Characteristics	146
3.2.1	Coherent Beam	146
3.2.1.1	Temporal coherence	147
3.2.1.2	Spatial coherence	148
3.2.2	Spatial Filter	151
3.2.3	Beam Expansion	154
3.2.4	Output Power	155
3.3	Principles of Emission	156
3.3.1	Induced Absorption	156
3.3.2	Spontaneous Emission	157
3.3.3	Stimulated Emission	160
3.3.4	Population Inversion	162
3.3.5	Emission Line-Width	164
3.3.5.1	Doppler broadening	164
3.3.5.2	Natural broadening	166
3.3.5.3	Collisional broadening	167
3.3.6	Principal Components of a Laser	169
3.3.7	Laser Systems	171
3.3.7.1	Gas lasers	171
3.3.7.2	Dye lasers	173
3.3.7.3	Optically pumped solid-state lasers	173
3.3.8	Semiconductor Diode Laser	175
3.3.8.1	Light-emitting diode	175
3.3.8.2	Laser diode	176
3.4	Fiber-Optics	178
3.4.1	Principle of Operation	178
3.4.1.1	Numerical aperture	180
3.4.1.2	Relative core-cladding index difference	180
3.4.2	Types of Fibers	181
3.4.3	Fiber Laser	183
3.4.4	Applications of Optical Fibers	185
3.4.4.1	Fibers used at telescopes	186
3.4.4.2	Fibers used for interferometry	187
3.4.5	Drawback of fibers	189

3.4.5.1	Absorption loss	189
3.4.5.2	Radiative loss	191
3.4.5.3	Dispersion	192
3.4.5.4	Losses due to miscellaneous sources	195
3.5	Light Sources and Illumination Systems	197
3.5.1	Lens-Based Light Source	197
3.5.2	Laser as a Light Source	200
3.5.3	Laser Interferometer Gravitational-wave Observatory	204
3.5.4	Laser Guide Star	206
4	Photon Detection Process	209
4.1	Radiation Detectors	209
4.1.1	Figure of Merit	211
4.1.1.1	Spectral bandwidth	213
4.1.1.2	Responsivity	214
4.1.1.3	Quantum efficiency	216
4.1.1.4	Detectivity	219
4.1.1.5	Frequency response	220
4.1.1.6	Response time	221
4.1.1.7	Dynamic range	223
4.1.1.8	Dark current	224
4.1.2	Detection of Photoevent	225
4.2	Mechanism of Photon Detection	226
4.2.1	The Human Eye	226
4.2.1.1	Structure of the eye	227
4.2.1.2	Operation of the eye	235
4.2.2	Photography	238
4.2.3	Micro-Photometer	240
4.3	Photon Detectors	241
4.3.1	Photon Effects	242
4.3.1.1	Internal photon effects	244
4.3.1.2	External photon effects	248
4.3.1.3	Other photon effects	248
4.3.1.4	Wave interaction effects	249
4.3.2	General Requirements of an Ideal Detector	251
4.3.2.1	Photocurrent	251
4.3.2.2	Gain	252

4.4	System Analysis	254
4.4.1	Principal Performance Functions	254
4.4.1.1	Limiting resolution	254
4.4.1.2	Non-linearity	255
4.4.1.3	Spectral response	256
4.4.1.4	Field-of-view	256
4.4.2	Limits on Radiation Detector Sensitivity	257
4.5	Noise	258
4.5.1	Radiation Noise	258
4.5.1.1	Photon signal fluctuation limit	259
4.5.1.2	Background photon fluctuation limit	260
4.5.2	Intrinsic Detector Noise	264
4.5.2.1	Thermal noise	264
4.5.2.2	Generation-recombination noise	265
4.5.2.3	Quantum (Shot) noise	266
4.5.2.4	Flicker noise ($1/f$ -noise)	269
4.5.2.5	Dark current noise	271
4.5.3	Amplifier Noise	272
4.5.4	Read-Out Noise	273
4.5.5	Noise Figure	274
4.5.5.1	Noise accumulation in photoelectric system	277
4.5.5.2	MTF measurements in a photoelectric system	277
5	Photodetectors	279
5.1	Photodetector Elements	279
5.2	Photoemissive Devices	280
5.2.1	Photoemissive Surfaces	283
5.2.1.1	Classical photoemissive surface	283
5.2.1.2	Negative electron affinity photoemissive surface	286
5.2.1.3	Types of photocathodes	288
5.2.2	Photomultiplier	289
5.2.3	Development of PMT	295
5.2.4	Astronomical Applications of PMTs	296
5.2.4.1	Photometer	297
5.2.4.2	Interferometric applications of PMTs	301

5.2.5	Use of Photoemission Devices for High Energies	305
5.2.5.1	PMTs with scintillators detectors and medical applications	307
5.2.5.2	Use of PMTs for gamma-ray astronomy	309
5.2.6	Image Intensifiers	310
5.2.7	Micro-Channel Plate	314
5.3	Photovoltaic Devices	320
5.3.1	P-N Junction Photodiode	320
5.3.2	P-I-N Photodiode	325
5.3.3	Hetero-junction Photodiode	329
5.3.4	Schottky Barrier Photodiode	331
5.3.5	Avalanche Photodiode	334
5.3.6	Phototransistor	339
5.3.7	Photovoltaic Devices for High Energies	340
5.3.7.1	Modern gamma-ray observatories	341
5.3.7.2	Proportional counters and ASTROSAT LAXPC/ SSM	342
5.3.7.3	X-ray CCDs and ASTROSAT SXT	344
5.3.7.4	New-generation semiconductors and ASTROSAT CZTI	345
5.4	Photoconductive Detectors	347
5.5	Detector Arrays	350
5.5.1	Focal Plane Arrays	351
5.5.1.1	Quantum well devices	353
5.5.1.2	Super-lattice structure	355
5.5.1.3	Focal plane array architecture	356
5.5.2	Broad Classifications of Detector Array	358
6	Charge Transfer Devices	361
6.1	Introduction	361
6.2	Charge-Coupled Device	362
6.2.1	Principle of Operation	363
6.2.2	CCD Architectures	367
6.2.2.1	Linear array CCD	368
6.2.2.2	Area array CCD	369
6.2.2.3	Scanning images	376

6.2.3	CCD Camera System	378
6.2.3.1	Dewar	378
6.2.3.2	CCD controller	380
6.2.4	Read-Out Procedure	387
6.2.5	Characteristic Features	390
6.2.5.1	Charge transfer efficiency	391
6.2.5.2	Quantum efficiency	392
6.2.5.3	Dynamic range	395
6.2.5.4	Gain	395
6.2.5.5	Responsivity	396
6.2.5.6	Dark current	397
6.2.6	Calibration of CCD	398
6.2.6.1	Sources of non-uniformities	398
6.2.6.2	Flat-field corrections	402
6.3	CMOS Sensor	403
6.4	Intensified CCD	406
7	Photon-Counting Systems	411
7.1	Introduction	411
7.2	Photon-Counting Methods	413
7.2.1	Detection of Photoelectrons	415
7.2.2	Necessity of Photon-Counting Systems	417
7.3	Genesis of Photon-Counting Detectors	419
7.3.1	Initial Experiments	421
7.3.2	Image Photon-Counting Device	422
7.4	PMT-Based Photon-Counting System	423
7.4.1	Digicon	424
7.4.2	Precision Analog Photon Address	425
7.4.3	Position-Sensing Detector	429
7.5	MCP-Based Photon-Counting systems	433
7.5.1	Special Anode Cameras	434
7.5.1.1	Wedge-and-strip anodes detector	434
7.5.1.2	Resistive-anode position sensing detector	435
7.5.2	Multi-Anode Micro-Channel Array	436
7.5.3	Delay-Line Anode	438

7.6	Charge Transfer Device–Based Photon-Counting Systems	441
7.6.1	CP40	441
7.6.2	CMOS-Based Photon-Counting Detector	447
7.7	Solid-State Technologies	449
7.7.1	Low-Light Level CCD	449
7.7.2	Superconducting Tunnel Junction	456
7.7.3	APD-Based Photon-Counting System	457
8	Radiation Detectors for Infrared Wavelengths	461
8.1	Atmospheric Transmission Windows	461
8.2	Infrared Astronomy	464
8.2.1	Ground-Based IR Observations	468
8.2.2	Space-Based IR Observations	471
8.3	Thermal Detectors	472
8.3.1	Thermal Effects	473
8.3.2	General Characteristics of Thermal Detector	475
8.3.3	Bolometers	478
8.3.4	Thermopiles	481
8.3.4.1	Golay cells	481
8.3.4.2	Pyroelectric detectors	482
8.3.5	Thermal Imagers	483
8.4	IR Detectors	485
8.4.1	Evolution of IR Detectors	486
8.4.2	Emerging Trends in IR Detectors	487
8.5	IR Photon Detectors	488
8.5.1	Quantum Well IR Photoconductor	489
8.5.2	Strained-Layer Super-Lattice Detectors	496
8.5.3	Quantum Dot IR Photodetectors	498
8.5.4	Cooled and Uncooled Detectors	499
8.6	IR Imaging Detectors for Astronomy	501
8.6.1	Indium Antimonide Detectors	504
8.6.2	HgCdTe-Based Detectors	508
8.6.2.1	NICMOS	512
8.6.2.2	PICNIC	514
8.6.2.3	HST Wide-field camera	515
8.6.2.4	HAWAII	516
8.6.2.5	SAPHIRA	521

8.7	Heterodyne Interferometry	523
8.7.1	Conventional Heterodyne Detection	525
8.7.1.1	Two-frequency single-photon heterodyne detection	525
8.7.1.2	Two-frequency multi-photon heterodyne detection	526
8.7.2	Non-Linear Heterodyne Detection	529
	<i>Appendix</i>	533
	<i>Bibliography</i>	535
	<i>Index</i>	555
