Table of Contents

Preface.................................................................................................................. xvii
Conference Organization..................................................................................... xviii
Program Committee.............................................................................................. xix
Reviewers ............................................................................................................. xx

Intelligent Computation

A Global-Crowding-Distance Based Multi-objective Particle Swarm Optimization Algorithm ................................................................. 1
  Jing Zhang and Huanqin Li
A New Model for Energy Consumption Optimization under Cloud Computing and its Genetic Algorithm .......................................................... 7
  Hai Zhu, Xiaoli Wang, and Hongfeng Wang
A Two-Stage Approach for Reconstruction of Cross-Cut Shredded Text Documents .................................................................................. 12
  Ya Wang and Ding-Cheng Ji
Adaptive Central Force Optimization with Variable Population Size .................. 17
  Liu Jie
An Adaptive Co-evolutionary Algorithm Based on Genotypic Diversity Measure ................................................................. 21
  Mingzhao Wang, Xiaoli Wang, Yuping Wang, and Zhen Wei
An Improved MULTI-ACS Algorithm for the Waste Collection Vehicle Arc Routing Problem with Turn Constraints .................................................. 25
  Jie Liu, Yanfeng He, and Aiping Zhang
Balance Function Analysis in Variable Weight Decision Making ......................... 30
  Deqing Li, Wenyi Zeng, Junhong Li, and Ping Guo
Convergence Analysis of Swarm Intelligence Based on Fuzzy Random Variables .................................................................................. 35
  Feng Jiqiang, Xu Chen, and Zhang Weiqiang
Learning Algorithms

A Feedback-Based Self-Organizing Query Structure Optimization Algorithm ........................................... 80
  Ruilin Xu

Affinity Propagation-Based Probability Neural Network Structure Optimization ........................................... 85
  Yingjuan Xie, Xinnan Fan, and Junfeng Chen

An Exemplar-Based Hidden Markov Model with Discriminative Visual Features for Lipreading ......................... 90
  Xin Liu and Yiu-Ming Cheung

Asymptotical Stability Criteria for Time-Delay Static Neural Networks Subject to Stochastic Perturbations ................ 94
  Huasheng Tan and Mingang Hua

Brain Storm Optimization Model Based on Uncertainty Information ....................................................... 99
  Junfeng Chen, Yingjuan Xie, and Jianjun Ni

Design and Implementation: Adaptive Active Queue Management Algorithm Based on Neural Network ................ 104
  Meng Zhenwei, Qiao Junlong, and Zhang Lijun
Individual Intelligence Based Optimization and Its Application to ITAE
Qiwen Yang, Shanshan Fu, Yuncan Xue, Shanna Ruan, and Junfeng Chen

Modeling Behaviors of Browsing and Buying for Alidata Discovery Using Joint Non-negative Matrix Factorization
Bin Ju, Mincao Ye, Yuntao Qian, Rong Ni, and Chenxi Zhu

Multi-scale Monte Carlo-Based Tracking Method for Abrupt Motion
Guanghao Zhang, Yao Lu, and Mukai Chen

The CT Image Reconstruction Algorithm Based on the Least Absolute Criterion by Alternating Direction Iterative
Wenzhang He, Hongjian Xu, Zhengyang Guo, Jie Liang, and Lina Wang

Wireless Location on CPN Correction Environmental Factors
Zhifeng Lin, Jiechang Wen, and Qiling Chen

Intelligent Systems and Complex Systems
A New Genetic Algorithm for Release-Time Aware Divisible-Load Scheduling
Xiaoli Wang, Yuping Wang, and Kun Meng

Analysis of Energy Saving and Performance Characteristics of Library Computer Room Intelligent High Heat Transfer and Exchanger
Chen Juntao, Wu Shulei, Lin Lan, and Zhan Jinmei

Design & Implementation to an RFID Based Conference Management System
Zhihua Jiang, Zhongwei Si, and Chi Luo

Detecting Driver Use of Mobile Phone Based on In-Car Camera
Dan Wang, Mingtao Pei, and Lan Zhu

Failure-Aware Resource Scheduling Policy for Hybrid Cloud
Zhang Hong and Zhu Hai

Granular Computing Model Based on Quantum Computing Theory
Jun Hu and Chun Guan

Improved Feedback Vertex Sets in Kautz Digraphs K (d, n)
Xirong Xu, Chun Yin, Sijia Zhang, and Yazhen Huang

Neuron-MOS-based Dynamic Circuits for Multiple-Valued Logic
Guoqiang Hang, Yang Yang, Danyan Zhang, and Xiaohua Li

Pattern Recognition and Knowledge Discovery
A Fast Image Stitching Algorithm Based on Improved SURF
Lin Zhu, Ying Wang, Bo Zhao, and Xiaozheng Zhang

A Novel Tracking Method Based on Ensemble Metric Learning
Qirun Huo and Yao Lu
A Study of Deep Belief Network Based Chinese Speech Emotion Recognition

Bu Chen, Qian Yin, and Ping Guo

Action Recognition Using Local Joints Structure and Histograms of 3D Joints

Yan Liang, Wanxuan Lu, Wei Liang, and Yucheng Wang

An Improved Bi-linear Deep Belief Network Algorithm for Image Classification

Niu Jie, Bu Xiongzhu, Li Zhong, and Wang Yao

An Improved Median Filter Algorithm Based on VC in Image Denoising

Shulei Wu, Huandong Chen, Xiangxiang Xu, Haixia Long, Wenjuan Jiang, and Dong Xu

An Improved Multi-pattern Matching Algorithm for Large-Scale Pattern Sets

Peng Zhan, Wang Yuping, and Xue Jinfeng

An Improved Remote Sensing Image Classification Based on K-Means Using HSV Color Feature

Wu Shulei, Chen Huandong, Zhao Zhizhong, Long Haixia, and Song Chunhui

Bimodal Learning for Multi-concept Image Query

Haijiao Xu, Peng Pan, Yansheng Lu, Chunyan Xu, and Deng Chen

Design of a Flash Digital Watermarking Application Using MATLAB GUI

Wen-Juan Jiang, Dong Xu, Shu-Lei Wu, and Bin Meng

Detecting Circles on Ego Network Based on Structure

Qiguang Mao, Xing Tang, Yining Quan, and Kai Deng

Domain-Specific Product Named Entity Recognition from Chinese Microblog

Xianxiang Yang, Heyan Huang, Xin Xin, Quanchao Liu, and Xiaoqi Wei

Experiments with Feature-Prior Hybrid Ensemble Method for Classification

Junyang Zhao, Zhili Zhang, Chongzhao Han, and Lijiang Sun

Image Denoising Using Low-Rank Dictionary and Sparse Representation

Tao Li, Weiwei Wang, Long Xu, and Xiangchu Feng

Image Up-Scaling: Based on Self Similarity and Local Information

Xin Zheng, Chenlei Lv, Qingqing Xu, and Ping Guo

Joint Sequential Shape Classification and Piecewise Elastic Motion Estimation

Feng Lv, Huijun Di, and Yao Lu

Multiview Face Retrieval in Surveillance Video by Active Training Sample Collection

Xu Xiao-Ma and Pei Ming-Tao

Nonlocal Diffusion Tensor for Visual Saliency Detection

Xiujun Zhang, Chen Xu, and Min Li

Rapid Face Detection in Static Video Using Background Subtraction

Wencai Zou, Yao Lu, Mukai Chen, and Feng Lv
Spatio-Temporal Context for More Accurate Dense Point Trajectories
Qingxuan Shi, Yao Lu, and Tianfei Zhou

Tracking Non-rigid Object Using Discriminative Features
Qian Wang, Qingxuan Shi, and Xuedong Tian

Vehicle Color Recognition Based on License Plate Color
Yanmei Dong, Mingtao Pei, and Xiameng Qin

Data Mining
A New Biclustering Algorithm for Time-Series Gene Expression Data Analysis
Yun Xue, Zhengling Liao, Meihang Li, Jie Luo, Xiaohui Hu, Guiyin Luo, and Wen-Sheng Chen

A Parallel Algorithm for Datacleansing in Incomplete Information Systems
Fei Chen and Lin Jiang

Application of Investment Plan Selection Based on Variable Weight Synthesis and Mahalanobis Distance
Ai Zhenghai and Si Zhongwei

Extracting Hyponymy of Ontology Concepts from Patent Documents
Junfeng Li, Xueqiang Lv, and Kehui Liu

Identifying Relevant Messages for Social TV
Weibo Li, Chunhong Zhang, Xiaofeng Qiu, and Yang Ji

N-gram Index Structure Study for Semantic Based Mathematical Formula
Yuexia Xu, Wei Su, Ming Cheng, Zhiyi Qu, and Hui Li

On Modeling and Querying of Text Corpora
Dingjia Liu, Guohua Liu, and Yuanyuan Liu

Relative Efficiency of Third-Grade General Public Hospitals in Zhejiang Province, China
Lin Kai, Ni Rong, Shao Yan-Hua, Wu Si-Jing, and Ma Xiao-Jiao

The Automatic Classification Research to Medical Imaging Disease Based on Naïve Naysesion Algorithm
Niu Luoyong, Hong Jiaming, Huo Hongbo, He Bishi, and Xu Zhe

Optimization Theory and New Methods
A Minimum-Elimination-Escape Function Method for Multimodal Optimization Problems
Lei Fan, Xiyang Liu, and Liping Jia
An Evolutionary Algorithm Based on a Space-Gridding Scheme for Constrained Multi-objective Optimization Problems
Wen Li and Hecheng Li

Combining TOPSIS and Particle Swarm Optimization for a Class of Nonlinear Bilevel Programming Problems
Liping Jia, Guocheng Zou, and Lei Fan

Dependence System and its Structure
Xuejun Huang and Xiaobin Qu

On the Field Patterns in Elliptic-Shaped Microshield Lines Loaded with Left-Handed Materials by the Edge-Based Finite Element Method
Hai Sun

Optimal Pricing with Yield Management in M/M/c
Li Xin and Zhaotong Lian

Simulation Study on the Keep-Right-Except-to-Pass Rule Model Based on Cellular Automata
Xin Yang, Linna Wang, Hongbo Zai, and Yanrong Ren

The Hilbert Boundary Value Problem for Beltrami Equation in Clifford Analysis
Si Zhongwei, Liang Lina, Ai Zhenghai, and Jiang Zhihua

The Sufficiency of Solution for Multi-objective Semi-infinite Programming
Xiangyou Li and Qingxiang Zhang

Variational Image Decomposition in Shearlet Smoothness Spaces
Min Li, Xiaoli Sun, and Chen Xu

Access Control and Protection
A 6 Dimensional Chaotic Generalized Synchronization System and Design of Pseudorandom Number Generator with Application in Image Encryption
Lequan Min, Xu Lan, Longjie Hao, and Xiuping Yang

A Chosen-Plaintext Method of CPA on SM4 Block Cipher
Weijun Shan, Lihui Wang, Qing Li, Limin Guo, Shanshan Liu, and Zhimin Zhang

A New Sybil Attack Detection for Wireless Body Sensor Network
Ruixia Liu and Yinglong Wang

A Trust-Role Based Context Aware Access Control Model
Chen Lu, Zhou Qing, Huang Gao-feng, and Zhang Li-qiang

A User-Based Document Management Mechanism in Cloud
Guozhen Shi, Mang Su, Fenghua Li, Jiapeng Lou, and Qiong Huang

Attribute-Based Keyword Search and Data Access Control in Cloud
Jiazhi Li and Lei Zhang

Design of a Masked S-Box for SM4 Based on Composite Field
Hao Liang, Liji Wu, Xiangmin Zhang, and Jiabin Wang
Detecting Compromised VM via Application-Aware Anomaly Detection .................................................392
Kai Luo, Shouzhong Tu, Chunhe Xia, and Dan Zhou

IP Traceback Algorithm Based on Deterministic Linear Network Coding ........................................397
Qiao Yan, Nan Lu, Tu-Wen Ning, Xi-Yan Yao, and Bao-Guang Li

Study on the Pass Rate of NIST SP800-22 Statistical Test Suite .........................................................402
Dong Lihua, Zeng Yong, Ji Ligang, and Han Xucang

Wavelet-Based Noise Reduction in Power Analysis Attack .................................................................405
Wei Liu, Liji Wu, Xiangmin Zhang, and An Wang

Cryptography and Cryptanalysis
A Countermeasure for DES with Both Rotating Masks and Secured S-Boxes .......................................410
Zeleng Zhuang, Jiachao Chen, and Haosheng Zhang

A Low-Cost PKC-based RFID Authentication Protocol and its Implementation ..................................415
Lili Wei, Zhaotong Luo, Qiang Qu, Qing He, and Jingwei Xu

A Method of Multiple Encryption and Sectional Encryption Protocol Reverse Engineering ..................420
Wei Lin, Jinlong Fei, Yuefei Zhu, and Xiaolong Shi

A Random Sampling Algorithm for SVP Challenge Based on y-Sparse Representations of Short Lattice Vectors .........................................................425
Dan Ding and Guizhen Zhu

A Statistical Model to Predict Success Rate of Ion Fault Injection Attacks for Cryptographic ICs ..................430
Liang Dai, Hulyun Li, Guoqing Xu, and Liying Xiong

Algorithm-Based Countermeasures against Power Analysis Attacks for Public-Key Cryptography SM2 .................................................................435
Xiaowei Han, Beibei Wang, An Wang, Liji Wu, and Woogeun Rhee

An Efficient Fuzzy Identity-Based Signature Scheme without Bilinear Pairings ................................440
Changji Wang

Application of Grover’s Quantum Search Algorithm to Solve the Transcendental Logarithm Problem ........445
Yi Tang and Shenghui Su

Attribute-Based Encryption for Restricted Circuits from Lattices .....................................................450
Zhao Jian and Gao Haiying

Hierarchial Identity-Based Encryption Scheme from Multilinear Maps .............................................455
Hao Wang, Zhihua Zheng, and Lei Wu

Insecurity of an Dynamic User Revocation and Key Refreshing for Attribute-Based Encryption Scheme ...........................................459
Changji Wang, Haitao Lin, Xilei Xu, Kangjia Zheng, and Xiaonan Xia
Data Security and Integrity

A Multiple-Level DCT Based Robust DWT-SVD Watermark Method
   Xueyi Ye, Xueling Chen, Meng Deng, Shuyun Hui, and Yunlu Wang

A Reliable Supervision Model and Implementation for the Trading of Digital Works
   Guozhen Shi, Ying Shen, Fenghua Li, and Mang Su

A Wav-Audio Steganography Algorithm Based on Amplitude Modifying
   Zou Mingguang and Li Zhitang

Adaptive Chosen-Plaintext Correlation Power Analysis
   Wenjing Hu, Liji Wu, An Wang, Xinjun Xie, Zhihui Zhu, and Shun Luo

Cryptographic Algorithms Analysis Technology Research Based on Functions
   Rui Chang, Liehui Jiang, Hui Shu, and Hongqi He

Diversifying Results of Top-k Queries over Bounded Regions
   Yu Zhou, Guohua Liu, and Biying Wang

Ensuring Reliability and QoS Optimizing for Web Service Composition
   Liping Chen

Hardware Design and Implementation of SM3 Hash Algorithm for Financial IC Card
   Ye Hu, Liji Wu, An Wang, and Beibei Wang

Method of Non-reference Image Quality Assessment of SSIM Based on Regional Weighted Entropy
   Zhang Tong, Zhao Shuna, and Li Xue

Mixed Obfuscation of Overlapping Instruction and Self-Modify Code Based on Hyper-Chaotic Opaque Predicates
   Xin Xie, Fenlin Liu, Bin Lu, and Fei Xiang

Stock Index Futures Basis and Liquidity of Correlation Analysis and Application Based on t-GARCH-Copula Model
   Suilin Pang and Yuanxiong Chen

Verification of Artifact Lifecycle Model
   Xiaomei Wan and Guohua Liu
Visualization of Police Intelligence Data Based on Word Clouds ......................................................... 539
  Peng Wei, Tongge Xu, Xi Qin, and Chao Wang

Information System Safety
A Developing Method for Parallel Program Based on System Generator .................................................. 544
  Wei Han and Jianchun Xie
A Feasible Control Strategy for LQG Control Problem with Parameter
and Structure Uncertainties ........................................................................................................ 548
  Guo Xie, Dan Zhang, Xinhong Hei, and Fucai Qian
A Hybrid Task Schedule Algorithm for Real-Time System Employing Trusted
Computing Technology .............................................................................................................................. 553
  Tingyu Jiang, Yahui Li, and Yuan Dong
A Modified PSO Algorithm Based on Cache Replacement Algorithm ....................................................... 558
  Mingyue Feng and Hua Pan
A Multi-users Searchable Encryption Scheme with Proxy Re-encryption .................................................... 563
  Zhang Ya-Ling, Liu Kai, Wang Shang-Ping, and Sun Qin-Dong
A Parking Guidance Method Based on Parallel Particle Swarm Optimization
Algorithm ..................................................................................................................................................... 568
  Bin Wang, Ying Liu, Xinhong Hei, Lei Wang, and Zhiqiang Zhang
A Rendering Algorithm for Function Call Diagram in Software Reliability
Assurance .................................................................................................................................................... 573
  Zhoukai Wang, Yikun Zhang, Xinhong Hei, Linjing Sun, Rui Zhou, and Ming Zhao
A Simple and Real-Time Parallel Compression of Time Series Scientific
Simulation Data for Interactive and Cooperative Supercomputing ............................................................. 578
  Wenjuan Liu, Xinhong Hei, Shinji Fukuma, and Shin-Ichiro Mori
A UML Model to Simulink Model Transformation Method in the Design
of Embedded Software .................................................................................................................................. 583
  Peng Guo, Yahui Li, Peng Li, Shuai Liu, and Dongya Sun
An Improved Method of Access Control Based on BLP Model in MILS ...................................................... 588
  Kaiqiang Li, Hao Feng, Yahui Li, and Zhiwei Zhang
Analysis of Distributed Consensus-Based Spectrum Sensing Algorithm
in Cognitive Radio Networks ...................................................................................................................... 593
  Li Hongning, Liu Xianjun, and Xu Leilei
Information Flow Control Model and Method in Distribute MILS ............................................................ 598
  Kaiqiang Li, Hao Feng, Yahui Li, and Zhiwei Zhang
Secure Networking Protocol with Identity Protection for Cooperation
of Unmanned Platforms ............................................................................................................................. 603
  Yahui Li, Wensheng Niu, Peng Li, Jianfeng Ma, and Yulong Shen
Network and Wireless Security

A New Packet Filter Schema Based on Multi-level Signature Hash and DFA Grouping ................................................................. 608
   Wang Yumeng, Wang Yuping, Xue Xingsi, Zhang Chen, and Huo Yuanliang

A Novel Key Pre-distribution Scheme in Wireless Sensor Networks ................................................................. 615
   Zhongyuan Qin, Yuying Wang, Hengkang Wang, and Jie Huang

A Wireless Sensor System for the Training of Hammer Throwers ................................................................. 620
   Ye Wang, Shaotsung Chang, Gongbing Shan, and Hua Li

Application Research on Retrospective Analysis System in Network Intrusion Detection ................................................................. 624
   Wei Wu, Nan Cheng, and Yubin Wang

Internet Security Protection in Personal Sensitive Information ................................................................. 628
   Yubin Wang, Chao Li, and Nan Cheng

Multi-sender Broadcast Authentication in Wireless Sensor Networks ................................................................. 633
   Ya Gao, Peng Zeng, and Kim-Kwang Raymond Choo

Packet Faking Attack: A Novel Attack and Detection Mechanism in OppNets ............................................................. 638
   Majeed Alajeely, Asma’a Ahmad, Robin Doss, and Vicky Mak-Hau

Selection of QoS Support on Artificial Immune Network Classifier for Dynamic Web Service Composition ................................................................. 643
   Guojun Zhang

Security Methodologies and Management

A Diploma Anti-forgery System Based on Lightweight Digital Signatures ................................................................. 647
   Yue Dai and Shenghui Su

A Key Pre-distribution Scheme Based on Multiple Key Spaces in Wireless Sensor Networks ................................................................. 652
   Yuying Wang, Zhongyuan Qin, Qunfang Zhang, Hengkang Wang, and Jie Huang

A KVM Virtual Machine Memory Forensics Method Based on VMCS ................................................................. 657
   Shuhui Zhang, Lianhai Wang, and Xiaohui Han

A Novel Identity-Based Security Scheme for Wireless Sensor Networks ................................................................. 662
   Zhongyuan Qin, Kerong Feng, Shuaiqi Hu, Lei Tao, Zunli Hu, Xinshuai Zhang, and Jie Huang

A Novel Subspace Template Attack Based on Symmetric Cross Entropy Criterion ................................................................. 667
   Fei Song, Liji Wu, An Wang, and Xinyu Zhao

A Novel Template Attack on wNAF Algorithm of ECC ................................................................. 671
   Zhenbin Zhang, Liji Wu, Zhaoli Mu, and Xiangmin Zhang
An Improved Side-Channel Attack Based on Support Vector Machine .......................................................... 676
   Zhong Zeng, Dawu Gu, Junrong Liu, and Zheng Guo

Brief Talk about the Existing Problems in Safety Management in Classification Testing and Evaluation .......................................................... 681
   Nan Cheng, Wei Wu, and Yubin Wang

Research on Ground Effect of Shipborne Flying-Wing UAV .......................................................... 685
   Jie Li, Gang Lei, Yong Xian, and Xiaoli Wang

Surveying and Analyzing Security Problems in Cloud Computing Environments .......................................................... 689
   Mouna Jouini and Latifa Ben Arfa Rabai

SymWalker: Symbolic Execution in Routines of Binary Code .......................................................... 694
   Jinxin Ma, Guowei Dong, Puhan Zhang, and Tao Guo

System Analysis and Modeling

A Bayesian Analysis of Zero-Inflated Count Data: An Application to Youth Fitness Survey .......................................................... 699
   Liying Lu, Yingzi Fu, Peixiao Chu, and Xiaolin Zhang

A Codebook Based Background Subtraction Method for Image Defects Detection .......................................................... 704
   Lianjun Zhang, Yao Lu, Mukai Chen, and Wencai Zou

A Parallel Method for Rough Entropy Computation Using MapReduce .......................................................... 707
   Si-Yuan Jing, Jin Yang, and Kun She

A Preconditioned GMRES Method for Elliptic PDE-constrained Optimization Problems .......................................................... 711
   Cong-Yi Zhu and Yu-Mei Huang

A Study of the Design and Parameters Optimization of BP Neural Network Using Improved GEP .......................................................... 714
   Ben-Bo Zha, Ru-Liang Wang, Huan-Long Sun, and Lei Wang

An Efficient Approximation Scheme for the Multiple QoS Constraints Routing .......................................................... 720
   Weijun Yang, Yan Yang, Xiaodong Wang, and Liang Yang

An Empirical Study on Determinants of Capital Structure in Chinese Listed Companies .......................................................... 724
   Qian Xu and Chuanguo Li

Analysis and Modeling of Learning Behaviors on Intelligent Tutoring Website .......................................................... 729
   Peng Sun, Ziyan Wu, Yunpeng Zhang, and Yang Yang

Analysis of Hybrid Feature Research Based on Extraction LPCC and MFCC .......................................................... 732
   Jianchen Zhu and Zengli Liu
Choice of Regularization Parameter in Constrained Total Variational Image
Restoration Model .................................................................................................................. 736
Zhibin Chen, Man Wang, Youwei Wen, and Zhining Zhu

Cooperative Advertising Analysis within a Supply Chain Based on Game Theory
Hong Zhang ................................................................................................................................... 741

Design of Detection and Control System for Diesel Injector ......................................................... 746
Weijun Yang, Yan Yang, and Yuanfeng Chen

Hesitant Fuzzy Information Aggregation Operators under Confidence Levels ............................... 750
Jianhui Yang and Chuanyang Ruan

Linear Input Method of Mathematical Formula ........................................................................... 755
Ming Cheng, Wei Su, Yuexia Xu, Zhiyi Qu, and Xuan Wang

Online Group Purchase Research Based on Commodities Trading .............................................. 761
Yu-Feng Zhuang and Da-Song Li

Practice and Development of Cloud Computing-Based Mobile Teaching Management and Evaluation System in Vocational Colleges .................................................................................. 765
Jing Nie

Real-Time Simulation in Dynamic Electromagnetic Scenes Using Pipeline Thread Pool .................. 770
Mukai Chen, Yao Lu, Guanghao Zhang, and Wencai Zou

Research and Application of a Stochastic Volatility Model with T-distribution Leveraged ................ 775
Jianhui Yang and Jie Wu

Statistical Inference of DEA Model of Environmental Efficiency Considering Undesirable Outputs ................................................................................................................................. 780
Yukun Jian and Lin Dai

Study on Effect Evaluation of Enterprise Staff Training Based on Grey Correlation Analysis Method ........................................................................................................................................... 785
Dongyi He and Fang Luo

Triangular Factorization of Strongly Row (Column) Full Rank Linear Equations ............................ 789
Liu Hongxia and Feng Tianxiang

Two-Phase SVPWM Modulation Method and Its Application in Stepper Motor ......................... 794
Na Dong, Zhengfeng Ming, and Tao Wen

Ways to Train the Statistical Capacity of Grassroots Statisticians .................................................... 798
Feng Tianxiang

Author Index .................................................................................................................................... 803
