### 3PGCIC 2014

#### Session 1: Cloud and Grid Computing Systems

**New Evaluation Criterion of File Replicas Placement for Replication Strategies in Data Grids**

C. Hamdeni, T. Hamrouni, and F. Ben Charrada

**A Security Enhanced IEEE1588 Protocol for Deep-Space Environment**

Zijing Cheng, Lei He, Jingling Zhao, Kai Lin, and Baojiang Cui

**A Dynamic Re-encrypted Ciphertext-Policy Attributed-Based Encryption Scheme for Cloud Storage**

Lequn Mo and Fuyong Lin

**On Reliability and Security in Knowledge Grids**

Christian Esposito, Massimo Ficco, Francesco Palmieri, and Vincenzo Loia

#### Session 2: Classification Systems

**A Method to Predict the Intermittent Power by Classification Model**

Hang Yang, Fuzheng Zhang, Aidong Xu, Cai Yuan, and Chuanlin Chen

**A Review: The Effects of Imperfect Data on Incremental Decision Tree**

Hang Yang, Aidong Xu, Huajun Chen, and Cai Yuan

**A Decision Support System Using Two-Level Classifier for Smart Grid**

Huajun Chen, Hang Yang, Aidong Xu, and Cai Yuan

**A Collective Intelligence Approach for Building Student's Trustworthiness Profile in Online Learning**

Jorge Miguel, Santi Caballé, Fatos Xhafa, Josep Prieto, and Leonard Barolli
Session 3: Intelligent Networking and Scheduling

A Vertical Handoff Decision Algorithm Based on the Movement-Aware of Mobile Nodes ................................................................. Qiu Xiaona and Liao Qing

Concept Drift Mining of Fundamental Variables in China Stock Market .......................................................... Yong Hu, Kang Liu, Bin Feng, Lijun Su, Xiangzhou Zhang, Weiqi Chen, and Yuran Zeng

Epidemic Dynamics in Weighted Adaptive Networks ......................................................... Bo Song, Guo-Ping Jiang, and Yu-Rong Song

Session 4: Cloud Performance, Security and Trustworthiness

An Efficient Cloud-Based Personal Health Records System Using Attribute-Based Encryption and Anonymous Multi-receiver Identity-Based Encryption .......................................................... Chang-Ji Wang, Xi-Lei Xu, Dong-Yuan Shi, and Wen-Long Lin

HPC Cloud Pills: On-Demand Deployment and Execution of HPC Application in Cloud Environments ................................................ Pietro Ruiu, Olivier Terzo, Giuseppe Carlino, Rossella Prandi, Alberto Falzone, Paolo Maggi, Livia Torterolo, Enrico Usai, and Gianpaolo Perego

MOMC: Multi-objective and Multi-constrained Scheduling Algorithm of Many Tasks in Hadoop ........................................................ Cristiana Voicu, Florin Pop, Ciprian Dobre, and Fatos Xhafa

A Network Gene-Based Framework for Detecting Advanced Persistent Threats .......................................................... Yuan Wang, Yongjun Wang, Jing Liu, and Zhijian Huang

Session 5: Data Intensive Computing, Data Mining and Collaborative Systems

Improving Differential Evolution with Ring Topology-Based Mutation Operators ........................................ Jingliang Liao, Yiqiao Cai, Yonghong Chen, Tian Wang, and Hui Tian

Topic Detection in Chinese Microblogs Using Hot Term Discovery and Adaptive Spectral Clustering ........................................ Chengxu Ye, Ping Yang, and Shaopeng Liu

Improved Recommendation System with Friends on SNS .......................................................... Yanxiang Ling and Qing Liao
Multi-input Functional Encryption Based Electronic Voting Scheme ................................................................. 134  
Yang Chen and You Lin

Session 6: Data Security, Authentication and Compression Algorithms

Distance-Bounding Protocol with Time-Stamped Authentication for RFID ................................................................. 139  
Wei Guo-Heng, Zhang Huan-Guo, and Li Zheng

A Novel Fingerprint-Based Biometric Encryption ........................................................................................................ 146 
Bin Lian, Zhendong Wu, and Linyou

A Verifiable Multi-recipient Encryption Scheme from Multilinear Maps ........................................................................... 151  
Zhengjun Jing, Guoping Jiang, and Chunsheng Gu

The Analysis of Compressive Sensing Theory .............................................................................................................. 157  
Jia Yu

Session 7: High Performance and Scalable Computing

Rumor Spreading Model Considering the Importance and Fuzziness of Information ........................................................................................................................................ 161  
Ling-Ling Xia, Guo-Ping Jiang, Bo Song, and Guan-Hua Zhu

Developing Map Matching Algorithm for Transportation Data Center ...................................................................................... 167  
Jian Huang, Chunwei Liu, and Jinhui Qie

Static Compliance Checking beyond Separation of Duty Constraints ......................................................................................... 171  
Yang Bo, Chunhe Xia, Yang Luo, and Qing Tang

Mixed Fruit Fly Optimization Algorithm Based on Lozi’s Chaotic Mapping ........................................................................... 179 
Huixia Luo, Guidong Zhang, Yongjun Shen, and Jialin Hu

Session 8: Virtual Organizations and Federations, Cloud Provisioning, Management and Programming

A Multi-attribute Vertical Handover Algorithm Based on Adaptive Weight in Heterogeneous Wireless Network ................................................................. 184  
Dan Feng, Ma Yajie, Zhou Fengxing, and Lu Shaowu

Static-Dynamic Control Flow Integrity ............................................................................................................................. 189  
Xiaolong Liu, Qiang Wei, and Ziwei Ye

The Chinese Conceptual Graph Matching Algorithm Based on Conceptual Sub-graph Weight Self-Adjustment ................................................................. 197  
Hui Zeng, Liyan Xiong, and Jianjun Chen
Session 9: Big Data, Data Management and Analytics I

Chinese Person Name Recognition Based on Naive Bayes ................................................................. 201
   Hui Zeng, Jun Wang, and Tao Wan

Vinyl Acetate Polymerization Rate Prediction Based on FOA GNN ......................................................... 205
   Yang Jing, Zeng Hui, and Huang Jiangping

An Improved Method of Interrogative Sentence Similarity Compute
and Application in Q&A System .............................................................................................................. 209
   Yang Jing, Zhu Qi, and Xu Haizhou

Strain Sensitizing of High-Sensitivity SAW Sensor Based on FBG ............................................................ 213
   Zhang Wei

Session 10: Big Data, Data Management and Analytics II

An Improved Image Encoding Algorithm Based on EZW and Huffman Joint
Encoding .................................................................................................................................................... 217
   Zhang Wei

The Research of Scale-Free Sensor Network Topology Evolution Based
on the Energy Efficient ............................................................................................................................ 221
   Yueshun He, Wei Zhang, Nan Jiang, and Xiaoyan Luo

The Research of Wireless Sensor Network Channel Propagation Model in
the Wild Environment ................................................................................................................................. 227
   Yueshun He, Wei Zhang, Nan Jiang, and Xiaoyan Luo

Session 11: Data Storage Security, Cryptographic
Techniques and Algorithms

Reliability Analysis of Business Continuity Based on SPN in Information
System Security Management .................................................................................................................... 232
   Pan Ping, Mao Xinyue, Yang Ping, and Zhou Huiling

A Survey of Chaos-Based Cryptography .................................................................................................... 237
   Ping Zhen, Geng Zhao, Lequan Min, and Xiaodong Li

High Efficient Multi-party Quantum Secret Sharing Scheme ...................................................................... 245
   Xiaoqian Zhang, Xiaoqing Tan, and Cui Liang
Session 12: Cryptographic Technologies for Information Security

Multi-party Quantum Secure Direct Communication .................................................................251
   Xiaoqing Tan, Xiaoqian Zhang, and Cui Liang

An Enhancement for Key Management in LTE/SAE X2 Handover Based
on Ciphering Key Parameters ..................................................................................................256
   Qinshu Xiao, Wen’An Zhou, Baojiang Cui, and Lingrong Li

Comprehensive Evaluation Method of Reliability of Internet of Things .............................................262
   Li Yong-Fei and Tian Li-Qin

Self-Certified Public Auditing for Data Integrity in Cloud Storage .....................................................267
   Jianhong Zhang and Weina Zeng

Session 13: Bio-inspired Computing and Pattern Recognition

An Asynchronous Periodic Sequential Patterns Mining Algorithm with Multiple
Minimum Item Supports .............................................................................................................274
   Xiangzhan Yu and Haining Yu

Computer-Aided Enterprise Management .....................................................................................282
   Lidia Ogiela and Marek R. Ogiela

Intelligent Bio-inspired Approach for Secrecy Management in the Cloud ............................................286
   Marek R. Ogiela, Lidia Ogiela, and Urszula Ogiela

Session 14: Bio-inspired Computing and eHealth Applications

Recognition of Body Movements Patterns for Immersive Virtual Reality System
Interface ......................................................................................................................................290
   Tomasz Hachaj and Marek R. Ogiela

Linguistic Approach to Modeling of Coronary Arteries in Semantic Techniques
of Image Retrieval .....................................................................................................................295
   Miroslaw Trzupek and Marek R. Ogiela

'NoSQL' and Electronic Patient Record Systems: Opportunities
and Challenges ........................................................................................................................300
   Philip Moore, Tarik Qassem, and Fatos Xhafa

Emerging Technologies for Monitoring Behavioural and Psychological
Symptoms of Dementia ..............................................................................................................308
   Tarik Qassem, George Tadros, Philip Moore, and Fatos Xhafa
Session 15: Intelligent Systems and Applications

Discovering Many-to-One Causality in Software Project Risk Analysis .................................................. 316
    Weiqi Chen, Kang Liu, Lijun Su, Mei Liu, Zhifeng Hao, Yong Hu, and Xiangzhou Zhang

Photon Pulses based Heterodyne Detection Precision Ranging System .................................................. 324
    Li-Xia Lei and Yue-Jin Zhang

Secure Personal Health Record System with Attribute-Based Encryption in Cloud Computing .................. 329
    Hongyang Yan, Xuan Li, and Jin Li

Medical Image Feature Extraction and Fusion Algorithm Based on K-SVD ........................................... 333
    Hongli Chen and Zhaohua Huang

Session 16: Data Intelligent Systems

Multiple Nested Schema of HBase for Migration from SQL ........................................................................ 338
    Gansen Zhao, Libo Li, Zijing Li, and Qiaoying Lin

Adaptive Cloud Bandwidth Rental and Allocation Strategy ........................................................................ 344
    Hongli Chen and Shanguo Lv

An Algorithm of Video Network Transmission Based on Unbalanced Multiple Description Coding .......... 350
    ShanGuo Lv and YiQin Cao

Schema Conversion Model of SQL Database to NoSQL ............................................................................... 355
    Gansen Zhao, Qiaoying Lin, Libo Li, and Zijing Li

Session 17: Security and Cryptography Techniques and Applications

New Data Publishing Framework in the Big Data Environments ................................................................. 363
    Jun Yang, Zheli Liu, Chunfu Jia, Kai Lin, and Zijing Cheng

A Dynamic Multiple Digital Watermarking Model based on Temporal Series ......................................... 367
    Xiaoyi Zhou, Jixin Ma, Wencai Du, and Yihong Li

Security Analysis of TAU Procedure in LTE Network ............................................................................ 372
    Li Qiang, Wenan Zhou, Baojiang Cui, and Liu Na

Session 18: Intelligent Processing

Design of a New EPON Connection Automatic Protection System ............................................................ 377
    Li-Xia Lei and Zhang Yue-Jin

All-Optical Signal Processing with New DPSK Based on Multi-dimensional Complex ............................... 382
    Dan Zou and Yan Mei
Distribution Properties and 2-Adic Complexity of Clock-Controlled FCSR Sequences .................................................................386
   Lishan Ke and Zhiqiang Lin

Research of Trust Model Personalized Dynamic Recommendation System Based on Auction Mechanism ..........................................390
   Shanguo Lv and Hongli Chen

CADSA 2014

Session 1: Distributed and Cloud Computing for Smart Cities

A Cost-Energy Trade-Off Model in Smart Energy Grids .................................................................394
   Ugo Gentile, Stefano Marrone, Nicola Mazzocca, and Roberto Nardone

A Semantic Access Control for Easy Management of the Privacy for EHR Systems .................................................................400
   Mario Sicuranza and Mario Ciampi

A Modeling Profile for Availability Analysis of Composite Cloud Services .................................................................406
   Flora Amato and Francesco Moscato

Mobile Traffic Analysis Exploiting a Cloud Infrastructure and Hardware Accelerators .................................................................414
   Mario Barbareschi, Alessandra De Benedictis, Antonino Mazzeo,
   and Antonino Vespoli

Session 2: Semantic Technologies for Distributed Applications

A Distributed Information Extraction System Integrating Ontological Knowledge and Probabilistic Classifiers .........................................420
   Anita Alicante, Massimo Benerecetti, Anna Corazza, and Stefano Silvestri

An Automatic Method for Deriving OWL Ontologies from XML Documents .................................................................426
   A. Minutolo, A. Esposito, M. Ciampi, M. Esposito, and G. Cassetti

Automatic Population of Italian Medical Thesauri: A Morphosemantic Approach .................................................................432
   Flora Amato, Annibale Elia, Alessandro Maisto, Antonino Mazzeo,
   and Serena Pelosi

Interactive Headphones for a Cloud 3D Audio Application .................................................................437
   Daniela D'Auria, Dario Di Mauro, Davide Maria Calandra, and Francesco Cutugno
FCNC 2014

Session 1: Cloud and Mobile Computing
Research on Online Measurement Method of Smartphone Energy Consumption .................................................. 443
Jie Ma, Haiyang Yu, Xiaoli Gong, and Xiaoyu Zhang

A Novel Framework for Application of Cloud Computing in Wireless Mesh Networks ......................................................... 448
Ran Li, Qingqing Liu, Mingqiang Wang, and Xianglin We

Performance Overhead of Xen on Linux 3.13 on ARM Cortex-A7 ................................................................. 453
Xiaoli Gong, Qi Du, Xu Li, Jin Zhang, and Ye Lu

Session 2: Peer-to-Peer Computing and Security
GMCR: A Novel Scheme for Improving Quality of Service of Live Streaming .................................................... 457
Guomin Zhang, Chao Hu, Na Wang, Xianglin Wei, and Changyou Xing

A General Framework for Detecting Malicious Peers in Reputation-Based Peer-to-Peer Systems ........................................ 463
Xianglin Wei, Jianhua Fan, Ming Chen, and Guomin Zhang

Optimizational Method of HBase Multi-dimensional Data Query Based on Hilbert Space-Filling Curve ................................ 469
Qingcheng Li, Ye Lu, Xiaoli Gong, and Jin Zhang

FNPCS 2014

Session 1: Secure Mechanisms and Techniques
An Enhanced Secure Mechanism of Low Level Reader Protocol (LLRP) V1.1 ....................................................... 475
Bing Zhao, Ziyue Wang, Baojiang Cui, and Xiaobing Liang

Mining Mobile Internet Packets for Malware Detection ................................................................. 481
Haifeng Jin, Baojiang Cui, and Jianxin Wang

Reverse Analysis Method of Static XSS Defect Detection Technique Based on Database Query Language ................................ 487
Cui Baojiang, Long Baolian, and Hou Tingting

Program Crash Analysis Based on Taint Analysis ................................................................. 492
Zhang Puhan, Wu Jianxiong, Wang Xin, and Zehui Wu

Sentence Similarity Based on Semantic Vector Model ................................................................. 499
Zhao Jingling, Zhang Huiyun, and Cui Baojiang
Session 2: Authentication Protocols

Analysis on Password Protection in Android Applications .......................................................... 504
Shao Shuai, Dong Guowei, Guo Tao, Yang Tianchang, and Shi Chenjie

A RFID Mutual Authentication Security Protocol Design and Analysis ......................................... 508
Xiaobing Liang, Yingjie Lv, Bing Zhao, Ying Liu, Zhiqiang Sun, and Wei Cen

JavaScript Malicious Codes Analysis Based on Naive Bayes Classification .................................. 513
Yongle Hao, Hongliang Liang, Daijie Zhang, Qian Zhao, and Baojiang Cui

OpenSSL HeartBleed: Security Management of Implements of Basic Protocols ........................... 520
Yongle Hao, Yizhen Jia, Baojiang Cui, Wei Xin, and Dehu Meng

IIPTC 2014

Session 1: Intelligent Image Processing

A Digital Watermarking Algorithm of Color Image Based on Visual Cryptography and Discrete Cosine Transform .......................................................... 525
Yanyan Han, Wencai He, Shuai Ji, and Qing Luo

Automatic Generation Algorithm of Penetration Graph in Penetration Testing .......................... 531
Xueqiu, Qiong Jia, Shuguang Wang, Chunhe Xia, and Liangshuang Lv

Research and Prevention of Rogue AP Based MitM in Wireless Network .................................... 538
Mengru Cai, Zhendong Wu, and Jianwu Zhang

Improved EAP-AKA Protocol Based on Redirection Defense ...................................................... 543
Binbin Yu, Jianwu Zhang, and Zhendong Wu

NIS 2014

Session 1: Authentication and Protection Schemes

A Statistical Integrity Authentication Scheme without Grouping for Streaming Data .......................... 548
Xi Shi

Virus-Evolutionary Genetic Algorithm Based Selective Ensemble for Steganalysis .......................... 553
Di Fuqiang, Zhang Mingqing, and Liu Jia

Encrypted Botnet Detection Scheme .............................................................................................. 559
Wang Ying

Challenges and Trends of Big Data Analytics .................................................................................. 566
Hui Li and Xin Lü

Mobile Security Apps: Loyal Guardians or Hypocritical Thieves? .................................................. 568
Yonglin Sun, Yongjun Wang, and Xiaobin Wang
SMDMS 2014

Session 1: Stream Media Delivery
Evaluation of Division Based Broadcasting System Considering Additional Information
Yusuke Gotoh and Akihiro Kimura .......................................................... 573

Experimental Deployment of a Multi-channel Wireless Backbone Network
Based on an Efficient Traffic Management Framework
Yuzo Taenaka, Masaki Tagawa, and Kazuya Tsukamoto ............................. 579

Session 2: Stream Data Management
DTLS for Lightweight Secure Data Streaming in the Internet of Things
Roy Fisher and Gerhard Hancke ................................................................. 585

A Study of Robustness Enhancement Technique on P2P Sensor Data Stream Delivery System Using Distributed Hashing
Tomoya Kawakami, Yoshimasa Ishi, Tomoki Yoshihisa, and Yuuichi Teranishi ................................................. 591

An Evaluation of a P2P Sensor Data Streaming System Considering the Number of Hops on the PIAX Testbed
Yoshimasa Ishi, Tomoya Kawakami, Tomoki Yoshihisa, and Yuuichi Teranishi .................................................................................... 597

SMECS 2013

Session 1: Simulation and Modelling
Integrated Technical Planning for Regional Smart Grid
Wu Zhengrong, Xu Aidong, Zhang Tao, and Chen Chuanlin ....................... 603

WDM-PON Breakpoint Precision Detection System Based Broadband Chaos Light
Dan Zou and Yue-Jin Zhang ........................................................................ 609

Malicious Code Detection Using Opcode Running Tree Representation
Ding Yuxin, Dai Wei, Zhang Yibin, and Xue Chenglong ................................ 616

An Efficient Time-Frequency Domain Speech Perceptual Hashing Authentication Algorithm Based on Discrete Wavelet Transform
Zhang Qiu-Yu, Xing Peng-Fei, Huang Yi-Bo, Dong Rui-Hong, and Yang Zhong-Ping ............................................. 622

Performance of Space Network Time Synchronization Protocol in Proximity Link
Xiang Lu and Jianxun Liu ............................................................................. 628
Author Index ................................................................. 633
