## Contents

- Preface 2
- The history of the VTA method: reading a tree 5
- Growth regulators, biomechanical terms 10
- Thinking tools: shear squares, tension triangles, force cone method 26
- Stiffness and strength 46
- What is wood? A simple model for wood, wood strengths 48
- Growth stresses, uniform stress axiom 57
- Defect symptoms: warning signals of trees 72
- Growth strips and the face of bark 81
- Optimization by deformation – winning by yielding 83
- Of pebbles, tree crowns and edges of forests 86
- A multifunctional tool 92
- Umbrella tree crown 109
- Safety factor: the mechanical piggy bank 120
- Slender trunks 124
- Hollow trunks, rot cavities 129
- Trunk segments and self-rejuvenation 148
- Leaning trunks 150
- Cushioning, ingrown wires, swallowed traffic signs 156
- Longitudinal and transverse fusion 164
- Tree grafting and the punching diagnosis 168
- Dead trunks and beetle trees 178
- Cracks in trunks and branches 181
- Branches, their attachment and their failure 208
- The body language of the Chinese moustache 241
- The tree fork: tension fork, compression fork, false fork, triple fork 252

III
