CONTENTS

SINGLE PHASE GAS FLOW

ICNMM2014-21055 ................................................................. V001T01A001
Refined Navier-Stokes-Fourier Equations for Rarefied Polyatomic Gases
Behnam Rahimi and Henning Struchtrup

ICNMM2014-21257 ................................................................. V001T01A002
Conjugate Heat Transfer Performances for Gaseous Flows in Short Micro Channels
Giulio Croce, Michele A. Coppola, and Olga Rovenskaya

ICNMM2014-21415 ................................................................. V001T01A003
Energy Equation of Gas Flow With Low Velocity in a Micro-Channel
Yutaka Asako

ICNMM2014-21740 ................................................................. V001T01A004
Convective Heat Transfer of Unchoked and Choked Gas Flow in Micro-Tubes
Chungpyo Hong and Yutaka Asako

ICNMM2014-21822 ................................................................. V001T01A005
Transonic Wall-Slip Analysis for Expanding Micro-Diffuser Flows for Cold Gas Propulsion Systems
Rodion Groll

ICNMM2014-22259 ................................................................. V001T01A006
Fluid Flow Characteristics in Micro-Gas-Jets
Yutaka Asako

SINGLE PHASE LIQUID FLOW

ICNMM2014-21088 ................................................................. V001T02A001
Measurement and Analysis of Laminar Heat Transfer Coefficients in Micro and Mini-Scale Ducts and Channels
Y. S. Muzychka and M. Ghobadi

ICNMM2014-21098 ................................................................. V001T02A002
Losses due to the Flow Through Conduit Components in Mini- and Micro- Systems Accounted for by Head Loss/Change Coefficients
Bastian Schmandt and Heinz Herwig

ICNMM2014-21183 ................................................................. V001T02A003
Modeling Drug Delivery in Gravity-Driven Microfluidic System
Antti-Juhana Mäki, Joose Kreutzer, and Pasi Kallio

ICNMM2014-21481 ................................................................. V001T02A004
Experimental Investigation of Single-Phase Liquid Flow and Heat Transfer in Multiport Minichannels
Mesru Altinoz, Almila Guvenc Yazicioglu, and Derek Baker
Parametric Studies of Single-Phase Multi-Layer Heat Sinks Using a Porous Media Approach: Effects of Spatially-Varying Porosity and Total Porosity
John J. Podhiny and Alfonso Ortega

Axial Wall Conduction in Pulsating Laminar Flow in a Microtube
Parthasarathi Mishra and Manoj Kumar Moharana

TWO-PHASE FLOW

Experimental Investigation of Degree of Premixing on Isothermal Air-Water Two-Phase Flow Through Minichannel
Hemant B. Mehta and Jyotirmay Banerjee

Investigation on Air-Water Two-Phase Flow in Downward Minichannel
Hemant B. Mehta and Jyotirmay Banerjee

Laminar Heat Transfer for Gas-Liquid Segmented Flows in Circular and Non-Circular Ducts With Constant Wall Temperature
Y. S. Muzychka

Flow Boiling Heat Transfer Enhancement in Subcooled and Saturated Refrigerants in Minichannel Heat Sinks
Ehsan Yakhshi-Tafti, Howard Pearlman, and Seung M. You

A CFD Study on Film Thickness, Pressure Drop, and Heat Transfer of Slug Flows in Circular Microchannels
Vandad Talimi, Yuri S. Muzychka, and Serpil Kocabiyik

Study on Ice Plug and Ferrofluid Pulled by a Magnet in a Microchannel
Yuichi Shibata, Osamu Okamoto, and Masahiro Kawaji

Study of Ring Film Formation and Motion in Gas-Liquid Two-Phase Flow in a Microchannel
Hideo Ide, Masanori Ide, and Masahiro Kawaji

A Comparative Study of Subcooled Flow Boiling in Uniform, Diverging Cross-Section and Segmented Finned Microchannels
Yogesh K. Prajapati, Manabendra Pathak, and Mohd. Kaleem Khan

Numerical Simulation of Bubble Growth During Nanofluid Flow Boiling in a Microchannel
Arman Khalighi, Matthew Blomquist, and Abhijit Mukherjee
ICNMM2014-21583 ........................................................................................................ V001T03A010
Investigation of the Hydrodynamics of Suspended Cells for Reliable Inkjet Cell Printing
Eric Cheng, Ali Ahmadi, and Karen C. Cheung

ICNMM2014-21616 ........................................................................................................ V001T03A011
Bubble Removal in Microfluidic Devices Using Nanofibrous Membranes
Ravindra Vundavilli and Jeff Darabi

ICNMM2014-21739 ........................................................................................................ V001T03A012
Flow of Taylor Bubble in Microchannel Having an Obstacle
Sudhakar Thippavathini and Manoj Kumar Moharana

ICNMM2014-21748 ........................................................................................................ V001T03A013
Experimental Characterization of Stabilized Suspensions Caused by Formation of Nanoparticle Halos
Hadi Keramati, Mohammad Zabetian, Mohammad Hassan Saidi, and Ali Asghar Mozafari

ICNMM2014-21800 ........................................................................................................ V001T03A014
On the Liquid/Liquid Slug Flow in a Micro-Capillary Reactor
Ina Dittmar and Peter Ehrhard

ICNMM2014-21821 ........................................................................................................ V001T03A015
In-Process Cleaning of a Micro Heat Exchanger With Ultrasound During the Continuous Crystallization of Solid Lipid Nanoparticles
Martin Schoenitz, Annika Hohlen, Wolfgang Augustin, and Stephan Scholl

ICNMM2014-22029 ........................................................................................................ V001T03A016
Non-Intrusive Optical Validation of Two-Phase Flow Regimes in a Small Diameter Tube
Darin J. Sharar, Arthur E. Bergles, Nicholas R. Jankowski, and Avram Bar-Cohen

ICNMM2014-22048 ........................................................................................................ V001T03A017
A Modular Microfluidic System for High Flow Rate Re-Dispersion of Gas-Liquid Flow
Alexander Tollkoetter and Norbert Kockmann

ICNMM2014-22211 ........................................................................................................ V001T03A018
Experimental Study on Two-Phase Pressure Drop of Air-Water in Horizontal Mini Channel
Ravi S. Engineer and Hemant B. Mehta

ICNMM2014-22258 ........................................................................................................ V001T03A019
Altering Bubble Dynamics via Vapor Extraction
Randall G. Fox, Corey D. Juarez, Deborah V. Pence, and James A. Liburdy

EVAPORATION, BOILING AND CONDENSATION
ICNMM2014-21025 ........................................................................................................ V001T04A001
Simple Flow-Pattern Based Heat Transfer Correlations for Flow Boiling in Micro/Minichannels
Zan Wu, Bengt Sunden, Shi-chune Yao, Vishwas V. Wadekar, and Wei Li

ICNMM2014-21212 ........................................................................................................ V001T04A002
Review of Correlations of Flow Boiling Heat Transfer Coefficients for Nitrogen
Hao Wang and Xiande Fang
Proposed Correlation for Forced Convection Boiling Heat Transfer in Mini and Micro Channels With CO₂ as a Fluid
Mayank I. Vyas, Salim A. Channiwala, and Mitesh N. Prajapati

Pressure Drop Analysis Using the Homogeneous Model for Open Microchannel With Manifold (OMM)
Ankit Kalani and Satish G. Kandlikar

Copper Plated Microchannel Heat Exchanger for MEMS Application
E. Borquist, E. Ogbonnaya, S. Thapa, D. Wood, and L. Weiss

Interactions Between Parallel Minichannels During Flow Boiling of R134A
Dolaana M. Khovalyg, Predrag S. Hrnjak, Aleksandr V. Baranenko, and Anthony M. Jacobi

Integration of a Pulsating Heat Pipe in a Flat Plate Heat Sink
Mitchell P. Hoesing and Gregory J. Michna

Single-Phase Cryogenic Flows Through Microchannel Heat Sinks
Erfan Rasouli and Vinod Narayanan

Heat Sink With Stacked Multi-Layer Porous Media
Arun K. Karunanithi and Fatemeh Hassanipour

Thermal Characterization of Multiple Micro-Jet Impingement Cooling Model
Afzal Husain, Jun-Hee Kim, and Kwang-Yong Kim

Electrical Interconnect and Microfluidic Cooling Within 3D ICs and Silicon Interposer
Hanju Oh, Yue Zhang, Li Zheng, and Muhannad S. Bakir

Effect of Inclination Angle on Pulsating Heat Pipe Performance
Sagar Babu Paudel and Gregory J. Michna

Design of a Mini Heat Sink Based on Constructual Theory for Electronic Chip Cooling
Srikanth Srinivasan, Shaikha Al-Suwaidi, and Reza Sadr

Experimental Characterization of an Open Loop Pulsating Heat Pipe Cooler
Daniele Torresin, Mathieu Habert, Francesco Agostini, Bruno Agostini, and Violette Mounier
ICNMM2014-22154 ........................................................................................................... V001T05A009
Geometric Optimisation of Conjugate Pentagonal Cooling Channels With
Internal Heat Generation
Olaborde Thomas Olakoyejo, Lauber Martins, Surajudeen Olanrewaju Obayopo, and
Josua Petrus Meyer

ICNMM2014-22205 ........................................................................................................... V001T05A010
Numerical Analysis and Thermal Testing of a Microchannel Chassis for Military
Electronics Cooling Applications
Uğur Alakoç, Selçuk Öksüz, and Tolga Ayyılmaz

ELECTROKINETIC FLOW
ICNMM2014-21173 ........................................................................................................... V001T06A001
Electroosmotic Flow Through Porous Materials
Rakesh Saini, Matthew Kenny, and Dominik P. J. Barz

ICNMM2014-21214 ........................................................................................................... V001T06A002
Investigating and Modeling the Correlation of Pressurization and Electron Acceleration Inside a
Micro Arc-Jet Thruster
Rodion Groll and Juan E. Gomez

ICNMM2014-21439 ........................................................................................................... V001T06A003
Numerical Simulation on the Formation of a Toroidal Microvortex by the
Optoelectrokinetic Effect
Kyung Chun Kim and Dong Kim

ICNMM2014-21654 ........................................................................................................... V001T06A004
Motion and Deformation of a Water Droplet Under the Influence of an Electric Field
Kyle DeProw and Jeff Darabi

ICNMM2014-21955 ........................................................................................................... V001T06A005
Analysis of a Viscoelastic Fluid Flow in a Microchannel With Asymmetric Zeta Potentials
Under a Combination of Electroosmotic and Magnetohydrodynamic Driven Forces
Juan P. Escandón, Oscar E. Bautista, and Federico Méndez

FUEL CELLS
ICNMM2014-21288 ........................................................................................................... V001T07A001
An Analysis of Two-Phase Flow Pressure Drop in Operating Proton Exchange Membrane
Fuel Cell Channels With the Lockhart-Martinelli Approach
Ryan Anderson, Lifeng Zhang, and David P. Wilkinson

ICNMM2014-21586 ........................................................................................................... V001T07A002
Simultaneous Investigation of PEMFC Performance and Water Content at Different
Flow Rates and Relative Humidities
Mohammadreza Hasheminasab, Ali Bozorgnezhad, Mehrzad Shams, Goodarz Ahmadi, and
Homayoon Kanani

ICNMM2014-21873 ........................................................................................................... V001T07A003
Two Phase Pressure Drop Characteristics During Low Temperature Transients in PEMFCs
Rupak Banerjee and Satish G. Kandlikar
The Effect of Injection and Suction on the Interfacial Mass Transport Resistance in a Proton Exchange Membrane Fuel Cell Air Channel
  Mustafa Koz and Satish G. Kandlikar

THIN FILM, INTERFACIAL PHENOMENA, AND SURFACE TENSION DRIVEN FLOWS

Fabrication of Inverted Trapezoidal Microstructures for Heat Transfer and Microfluidics Applications
  Henry Ems and Sidy Ndao

Capillary Imbibition Dynamics in Porous Media
  Swayamdipta Bhaduri, Pankaj Sahu, Siddhartha Das, Alok Kumar, and Sushanta K. Mitra

Water Molecule Adsorption on Vertically Aligned Single-Walled Carbon Nanotubes
  Hiroyuki Moroizumi, Shohei Chiashi, Yasuyuki Takata, and Masamichi Kohno

Pressure Drop Measurements in Turbulent Channel Flow Over Superhydrophobic Surfaces With Riblets
  Joseph F. Prince, Daniel Maynes, and Julie Crockett

Falling Film Evaporation of Binary Refrigerant Mixture in Vertical Rectangular Minichannels Consisting of Serrated-Fins
  Junichi Ohara and Shigeru Koyama

BIOMEDICAL AND LAB-ON-A-CHIP

The Effect of Changing the Gap Height on Droplet Deformation During Transport in Digital Microfluidics Systems
  Mohamed Yafia and Homayoun Najjaran

Quantifying Elastic Vortex Growth of DNA Solutions in Planar Micro-Bends
  Shefali Gulati, Susan Muller, and Dorian Liepmann

A Microchannel With Repeated Sharp Corners for Single Stream Particle Focusing
  Liangliang Fan, Xukun He, Liang Zhao, Yu Han, and Jiang Zhe

Silicon Based Lab-on-Chip Device for Acoustic Focusing Applications
  Kamran Moradi and Bilal El-Zahab
Numerical Investigation of Irrigant Penetration Into Dentinal Microtubules
Mohsen Motie Shirazi, Omid Abouali, Homayoon Emdad, Mohammad Reza Nabavizade, Hossein Mirhadi, and Goodarz Ahmadi

Surface Accumulating E. coli in Water Flow Using a Bypass Mini-Channel Based Device
Mohammed S. Mayeed and Golam Newaz

Effect of Electrode Geometry on Droplet Splitting in Digital Microfluidic Platforms
Ehsan Samiei, Hojatollah Rezaei Nejad, and Mina Hoorfar

MEASUREMENTS AND INSTRUMENTATION
A Liquid Metal Based Capacitive Microsensor
Meng Gao and Lin Gui

Sensitivity Analysis of the Response of a Gas Sensor in a Microfluidic-Based Gas Analyzer
Mohammad Paknahad, Vahid Ghafarinia, and Mina Hoorfar

MODELING AND SIMULATION
Multiscale Simulation of Nano-Fluidic Networks
Dave Stephenson, Duncan A. Lockerby, Matthew K. Borg, and Jason M. Reese

Multiscale Simulation of Knudsen-Pump Channel Flows
Alexander Patronis and Duncan A. Lockerby

Heat Transport Through a Solid-Liquid Interface System and its Thermal Rectification Phenomena by Molecular Dynamics Simulations
Feng Yuan and Liang Xin-Gang

A New Diffuser/Nozzle Structure With Extended Sidewalls for Maximising the Valveless Micropump Performance
Jiaqi Wang, Hirofumi Miki, Kean C. Aw, and Rajnish N. Sharma

Finite Element Modeling of Micro-Particle Manipulation Using Ultrasonic Standing Waves
Süleyman Büyükkocak, Barbaros Çetin, and Mehmet Bülent Özer

Modeling Evaporation of a Small Drop on a Horizontal Substrate
Xie Chiyu, Liu Guangzhi, Zhang Jianying, and Wang Moran
Molecular Dynamics Simulations of Benchmark Geometries Representing a Flow Through Porous Media
Marc-Florian Uth, Henrik Asmuth, Christian Windt, and Heinz Herwig

Numerical Simulation of Flow Pattern of Boiling Heat Transfer in Mini/Micro Channel Using VOF Method
Jigar C. Gamit and Salim A. Channiwala

Aerosol Particle Impaction on Fiber Arrays in a Flow Stream Using a Lattice Boltzmann Model
Kuan-Wei Lee and Kuang C. Lin

Analysis of Conjugate Heat Transfer in Microchannels: Solution via Hybrid Analytical-Numerical Method
N. R. Braga Jr and L. A. Sphaier

Prediction of Cell Growth Over a Circular Strand of a Scaffold Using the Lattice Boltzmann Method
Md Shakhawath Hossain, Donald J. Bergstrom, and X-B. Chen

Conjugate Interface Heat and Mass Transfer Simulation With the Lattice Boltzmann Equation Method
Like Li, Chen Chen, Renwei Mei, and James F. Klausner

Numerical Investigation of Fiber Flocculation in the Air Flow of an Asymmetric Diffuser
Jelena Andric, Stefan B. Lindstrom, Srdjan Sasic, and Hakan Nilsson

Heat Conduction Simulation in Double-Walled Carbon Nanotubes With Intertube Additional Atoms
Peng Tan, Yanhui Feng, Liu Cui, and Xinxin Zhang

CFD Aided Simulation of Frost Growth Inside a Narrow Duct With Uniform Wall Temperature Variation
Masoud Darbandi, Ehsan Asgari, Morteza Hajikaram, and Gerry E. Schneider

Semi-Analytical Method for the Solution of the Poisson Equation Derived From the Navier-Stokes Using Integral Trasforms
Daniel J. N. M. Chalhub, Leandro A. Sphaier, and Leonardo S. de B. Alves

Mixing and Heat Transfer in Helical Capillary Flow Reactors With Alternating Bends
Marius G. Gelhausen, Safa Kutup Kurt, and Norbert Kockmann
Finite Element Volume Analysis of Propane Preheated Air Flame Passing Through a Minichannel

Masoud Darbandi, Majid Ghafourizadeh, and Gerry E. Schneider

MHF (Minimum Heat Flux) Point on Anodized Zirconium Surface During Quenching

Jun-young Kang, Seol Ha Kim, HangJin Jo, Ho Seon Ahn, Moo Hwan Kim, and Hyun Sun Park

Role of Nanostructures in Anomalous Thermal Conductivity of Nanofluids

S. M. Sohel Murshed and C. A. Nieto de Castro

The Effect of Temperature Dependent Electrical Conductivity on the MHD Natural Convection of Al₂O₃: Water Nanofluid in a Rectangular Enclosure

Ali Mohammad Asadian, Omid Abouali, Mahmood Yaghoubi, and Goodarz Ahmadi

Boiling at Macro- and Microscale: Totally Neglected Universal Context

I. G. Shekrladze

Microfluidics Device Manufacturing Using the Technique of 3D Printing

Walter Duarte de Araújo Filho, Rigoberto E. M. Morales, Fábio K. Schneider, and Luciana Martins P. de Araújo

Author Index
