Deposition of Diamond/ β -SiC Composite Films for Mechanical and Biological Applications

Schriftenreihe der Arbeitsgruppe des Lehrstuhls für Oberflächen-und
Werkstofftechnologie im Institut für Werkstofftechnik

Table of Contents

Symbol list	I
Abstract	VI
1 Introduction	1
1.1 Benefit of composite films	1
1.2 The aim of this work.....	2
2 General background	5
2.1 Crystal structure and properties of diamond and SiC.....	5
2.2 Synthesis of diamond and SiC films.....	8
2.2.1 Chemical vapor deposition of diamond films	8
2.2.2 Chemical vapor deposition of SiC films	13
2.2.3 Synthesis of diamond/ β -SiC composite films.....	15
2.2.4 Morphology and structure characterization	18
2.3 Wear and adhesion of diamond films	20
2.3.1 Wear and failure of diamond films	20
2.3.2 Methods of improving diamond film adhesion.....	21
2.3.3 Adhesion tests	22
2.4 Diamond and β -SiC surface modification	24
2.4.1 Surface terminations	24
2.4.2 Gradient surface for protein adsorption	25
2.4.3 Surface chemistry and wettability analysis	26
3 Experimentation	29
3.1 Film deposition	29
3.1.1 Substrate materials and pre-treatment.....	29
3.1.2 HFCVD setup.....	30
3.1.3 Procedure	32
3.2 Film surface modification.....	37
3.2.1 Surface termination.....	37
3.2.2 Protein adsorption	37
3.3 Characterization tools	38
3.3.1 Morphology characterization	38

3.3.2 Structure characterization	39
3.3.3 Surface chemistry analysis.....	40
3.3.4 Property evaluation	40
4 Deposition of diamond/β-SiC composite gradient films	43
4.1 Morphology and growth rate	43
4.2 Structure.....	46
4.3 Correlating the growth rate with local gas phase compositions	49
4.3.1 Effect of the distance between filament and substrate.....	49
4.3.2 Effect of the deposition pressure.....	52
4.3.3 Effect of the TMS concentration.....	53
4.4 Growth schematics	53
4.4.1 Diamond top film with composite interlayer	53
4.4.2 Cross-sectional gradient film with increasing diamond/ β -SiC ratio.....	55
4.4.3 Homogeneous composite film	55
4.5 Summary.....	55
5 Surface adsorption behavior in biological applications	57
5.1 Surface properties	57
5.1.1 Surface chemical state.....	57
5.1.2 Wettability and surface energy	65
5.2 Protein adsorption on gradient films	69
5.2.1 Preferential protein adsorption.....	70
5.2.2 Fluorescence lifetime analysis	77
5.3 Summary.....	81
6 Diamond/β-SiC composite films as cutting tool coatings.....	83
6.1 Deposition of diamond/ β -SiC composite films on WC-Co substrates	83
6.1.1 Effect of nucleation parameters	83
6.1.2 Effect of growth parameters.....	87
6.1.3 Film structure	89
6.1.4 Adhesion and tribology behavior.....	93
6.2 Deposition of diamond top films on WC-Co substrates	97
6.2.1 Film morphology	98
6.2.2 Residual stress.....	101
6.2.3 Adhesion	104
6.3 Turning test of cutting tools.....	106

6.3.1 Morphology of diamond coated cutting tools	107
6.3.2 Workpiece material	107
6.3.3 Surface of machined material	109
6.3.4 Wear of cutting tools.....	112
6.4 Summary.....	117
7 Summary and future aspects.....	119
7.1 Summary.....	119
7.2 Future aspects	122
References	124
Appendix	143
