TABLE OF CONTENTS

LINE OF SIGHT AND DENSITY MEASUREMENT

Analysis of Focused Laser Di ................................................................. 1
B. E. Schmidt, J. E. Shepherd

Optical Measurements of Velocity, Density, and Mass Flux in a Supersonic Wind Tunnel .......................................................... 23
Nicholas A. Galyen, David H. Plemmons

A Time-Resolved Temperature Measurement System for Free-Piston Shock Tunnels .......................................................... 38
Yedhu Krishna, Suzanne Lanier Sheehe, Sean O’Byrne

ADVANCES IN TEST METHODOLOGY AND CFD INTEGRATED

Development of a Transonic Gust Rig for Simulation of Vertical Gusts on Half-models .......................................................... 58
Naomi J. Allen, Mark Kenneth Quinn

F-35 Conventional Mode Jet-Effects Testing Methodology .......................................................... 70
Marcus A. McWaters

Motion Measurement of a Wind Tunnel Model by Stereovision Technique .......................................................... 102
B. Martinez, D. Bidino, M. Bastide, C. Demeautis, P. Wey, F. Leopold

Experimental Investigations about Heat Transfer Characteristics of Irregular Impingement Jet Arrays in Typical Active Clearance Control System .......................................................... 114
Fangyuan Liu, Junkui Mao

SURFACE AND INFLOW SENSING

Shear Stress Sensing with Elastic Microfence Structures .......................................................... 125
Alexxandra Cisotto, Frank L. Palmieri, Aditya Saini, Yi Lin, Christopher S. Thurman, Jinwook Kim, Taeyang Kim, John W. Connell, Yong Zhu, Ashok Gopalarathnam, Xiaoning Jiang, Christopher J. Wohl

Development of a Sol-Gel Based Nanoporous Unsteady Pressure Sensitive Paint and Validation in the Large Transonic ONERA’s S2MA Windtunnel .......................................................... 139
Y. Michou, B. Delégisite, F. Lebrun, E. Scolan, A. Grivel, R. Steiger, R. Pugin, M. C. Merienne, Y. Le Sant

A Counter-Propagating Laser Air Speed Sensor System for Aircraft .......................................................... 158
Joe Kurtz, Sven M. Wittig, Sean O’Byrne

Computational Modeling of Radiation Effects on Total Temperature Probes .......................................................... 173
Jonathan Reardon, Alex Schneider, Joseph A. Schetz, K. Todd Lowe

MODEL ATTITUDE, DEFORMATION, AND DATA ACQUISITION TECHNIQUES

Temperature Measurement at the Exit of Annular Combustor with Slinger in Turbojet Engine .......................................................... 197
Deng-Huan Liu, Jie Jin, Fang Wang, Man-Xiang Song, Nin-Ming Pan, Da-Xiang Liu, Wen-Ming Jin

NASA Data Acquisition System Software Development for Rocket Propulsion Test Facilities .......................................................... 208
Phillip W. Hebert, Alex C. Elliot, Andrew R. Graves

Model Deformation Measurement Capabilities at ETW .......................................................... 225
Harald Quix, Jennifer Semmelmann

SPATIALLY-RESOLVED SPECTROSCOPIC TECHNIQUES

WIDECARS Spectra Fitting in a Premixed Ethylene-Air Flame .......................................................... 238
Andrew D. Cutler, Emanuela C. A. Gallo, Luca M. L. Cantu

Density Scaling and Calibration of FLEET Temperature Measurements .......................................................... 250
Nathan D. Calvert, Arthur Dogariu, Matthew R. Edwards, Richard B. Miles

Precision of FLEET Velocimetry using High-Speed CMOS Camera Systems .......................................................... 262
Christopher J. Peters, Paul M. Danely, Brett F. Bathel, Naibo Jiang, Nathan D. Calvert, Richard B. Miles
Application of FLEET Velocimetry in the NASA Langley 0.3-meter Transonic Cryogenic Tunnel .................................................. 287
Ross A. Burns, Paul M. Danehy, Benjamin R. Halls, Naibo Jiang

Design and Application of Filtered Rayleigh Scattering Experiments for Mixing Studies of New Strut Injectors for Scramjets .......................................................... 307
Cody Ground, Dhananda Thumiah, Luca Maddalena

DESIGN OF EXPERIMENT

Case Studies for the Statistical Design of Experiments Applied to Powered Rotor Wind Tunnel Tests .................................................. 320
Austin D. Overmeyer, Philip E. Tanner, Preston B. Martin, Sean A. Commo

GROUND TEST FACILITY IMPROVEMENTS I

Development of a Research Facility to Study the Flow Field in an APU-Style Inlet .......................................................... 342
Fangyuan Lou, William L. Murray, Nicole L. Key

Unsteady Low-Speed Wind Tunnel Design .......................................................... 351
David Greenblatt

Experiments with the Model Test Apparatus installed in the AFIT Low Speed Tunnel .................................................. 378
James Lancaster, Mark F. Reeder, Richard G. Cobb, Michael Sisima, Patrick Rowe

Upgrades to the Texas A&M Oran W. Nicks Low-Speed Wind Tunnel for M = 0.4 Operation .................................................. 391
Alexander K. Herring, Douglas M. Kutz, Lisa A. Brown, Edward B. White

PARTICLE-BASED VELOCIMETRY APPLICATIONS AND DEVELOPMENTS

Velocity Measurements in an Unseeded Turbojet Engine Exhaust using Planar Doppler Velocimetry .................................................. 402
Thomas P. Jenkins, Jerry M. Seitzman, Sampath Adusumilli

Steroscopic PIV Measurements in a Turbofan Engine Inlet with Tailored Swirl Distortion .................................................. 414
Tamara Guimaraes, K. Todd Lowe, Michael Nelson, Walter F. O'Brien, Caroline Kirk

Multi-stereo PIV Measurement of Propeller Wake Flow in Industrial Facility .................................................. 426
Matteo Novara, Reinhard Geisler, Andreas Schroder

Application of Particle Image Velocimetry and Laser Induced Fluorescence in a cooling duct .................................................. 439
H. Rochlitz, P. Scholz

Biological Flow Measurement using Optical Flow Method .................................................. 452
Zifeng Yang, Hongtao Yu, George Huang, Bryan Ludwig

Development and Characterization of an Inexpensive LED-based Light Source for High-frame-rate Schlieren Imaging .................................................. 468
Daniel A. Lincoln, Kartikeya Murari, Craig T. Johansen

GROUND TEST FACILITY IMPROVEMENTS II

Lyapunov-Based Nonlinear Control of Wind Tunnel Supersonic Nozzle Contour .................................................. 475
M. Sadraey

Development and Demonstration of A Continuous Beta Sweep Test & Analysis Technique(CBSTAT) Rig .................................................. 482
Ke Xie

Wind Tunnel Testing of Variable Camber Compliant Wing with Multiple Load Cell Test Fixture .................................................. 490
L. Zientarski, Christopher Marks, Aaron Altman, James Joo

Reactivation of the NTF 3000 Ton Liquid Nitrogen Tank from Ambient Condition .................................................. 503
Venkit S. Venkat, Owen W. Bissett, Ronald L. Marmol, Steven C. Dunn, Roger L. Wagner

AERODYNAMIC MEASUREMENT SYSTEMS: CALIBRATION AND MONITORING

Improved Regression Analysis of Temperature{ Dependent Strain-Gage Balance Calibration Data .................................................. 513
N. Ulbrich

Long-Term Study of Wind-Tunnel Balance Calibration History using Statistical Process Control .................................................. 526
Ryan J. Callahan, Drew Landman, Sean A. Commo, Keith C. Lynn
Calibration of Five-Hole Probe with Redundant Coefficients
Sema Karahan, Ali T. Kutay

The Use of Absolute-Value Terms in Regression Modeling of Multi-Piece Force Balances
Mark Kammeyer, Norbert Ulbrich
