The contribution of electricity consumers to peak shaving and the integration of renewable energy sources by means of demand response

A model-based long-term scenario analysis in consideration of structural changes in electricity demand
Contents

1. Introduction and motivation ........................................... 1
   1.1. Background and problem definition .......................... 1
   1.2. Research questions and objectives .......................... 2
   1.3. Structure and procedure ...................................... 3

2. Demand response in theory and in practice ......................... 7
   2.1. Definition of terms ......................................... 7
   2.2. Benefits and costs of demand response .................... 9
   2.3. Deployment of demand response measures .................. 12
      2.3.1. Demand response programmes .......................... 12
      2.3.2. Integration of demand response in power system management .......................... 15
      2.3.3. Monitoring, communication and control requirements .......................... 17
   2.4. Processes suitable for demand response .................... 19
      2.4.1. Load reduction in industry ............................. 21
      2.4.2. Load shifting in industry ............................... 21
      2.4.3. Load shifting in the residential and tertiary sector .......................... 23
   2.5. State of research into demand response modelling .......... 26
      2.5.1. Set-up of clustering structure .......................... 26
      2.5.2. Literature classification ............................... 28
      2.5.3. Complementary studies addressing demand response in Germany .......................... 32
      2.5.4. Summary and conclusions ............................... 34

3. Transformation of the system load curve through structural changes in demand ........................................... 37
   3.1. Analysis of historical load curves .......................... 37
      3.1.1. Data basis ............................................. 37
      3.1.2. The German load curve ................................ 38
      3.1.3. Load curve evolution in other European countries .... 47
      3.1.4. Summary and conclusions ............................... 49
   3.2. Load curve projection ....................................... 50
      3.2.1. State of research into long-term load projections .............. 50
      3.2.2. Development of the eLOAD projection module ................. 53
      3.2.3. Validation of the Partial Decomposition Approach ............. 57
      3.2.4. Critical discussion ..................................... 60
   3.3. Process specific load profiles ............................... 62
      3.3.1. Definition and application of load profiles .............. 64
