Heft 2015-4

**Damage characteristics of brittle rocks inside
the pre-failure range:
numerical simulation and lab testing**

von Chen Wei

Freiberg 2015

Abstract	III
Table of Contents	V
List of Figures	IX
List of Tables.....	XV
Notation.....	XVII
1 Introduction	1
1.1 Objective and scope	1
1.2 Research strategy and structure of thesis	2
2 State of the art	3
2.1 Theoretical background.....	3
2.1.1 Time-independent damage	3
2.1.1.1 Fracture criterion based on stress intensity factors	3
2.1.1.2 Fracture toughness determination for disc-shaped specimen.....	6
2.1.1.3 Empirical Failure criterions.....	10
2.1.2 Time-dependent damage	14
2.1.2.1 Charles equation.....	15
2.1.2.2 Hillig-Charles equation	16
2.2 Damage evaluation	17
2.3 Lab testing	20
2.4 Numerical simulation	21
3 Time-independent damage analysis	25
3.1 Introduction	25
3.2 Homogeneous model.....	25

3.2.1 Model description.....	25
3.2.2 Numerical parameters analysis.....	27
3.2.3 Simulation of Coconino sandstone.....	31
3.3 Heterogeneous model.....	35
3.3.1 Model description.....	35
3.3.2 Simulation of LdB granite.....	36
3.4 Time-independent damage of Kirchberg II and Eibenstock II granite.....	42
3.4.1 Time-independent lab tests.....	42
3.4.1.1 Triaxial compressive tests	42
3.4.1.2 Pre-failure damage analysis and a new failure criterion	44
3.4.1.3 Mode-I and Mode-II fracture toughness tests for Kirchberg II granite.....	52
3.4.1.4 Fracture patterns of Eibenstock II granite under compressive load	58
3.4.2 Simulation of lab tests using heterogeneous model	59
3.4.2.1 Mineral distribution based on digital images	59
3.4.2.2 Simulation of triaxial compression tests	62
3.4.2.3 Simulations of Mode-I and Mode-II fracture toughness tests	65
3.4.2.4 Simulation of fracture patterns of Eibenstock II granite	66
3.5 Time-independent damage indices in the pre-failure range.....	69
3.5.1 Damage index for uniaxial compression tests.....	69
3.5.2 Damage index for Brazilian tests	70
3.5.3 Damage index for Mode-I and Mode-II fracture toughness tests	71
3.5.4 Damage index for triaxial compression tests	72
3.6 Conclusions	73
4 Time-dependent damage analysis	77
4.1 Introduction	77
4.2 Implementation of subcritical crack growth algorithm	77

4.2.1 Implementation of Charles equation	77
4.2.2 Implementation of Hillig-Charles equation.....	83
4.3 Parameters analysis for subcritical crack growth.....	85
4.3.1 Influence of parameters in Charles equation.....	85
4.3.2 Influence of parameters in Hillig-Charles equation	91
4.4 Simulation of sandstone based on homogeneous model.....	94
4.4.1 Subcritical crack growth of one-edged crack under tensile load	94
4.4.2 Numerical simulation results.....	96
4.5 LdB granite simulation based on heterogeneous model.....	100
4.5.1 Uniaxial compressive creep test simulation.....	100
4.5.2 Crack growth and damage characteristics	105
4.6 Time-dependent damage of Kirchberg II granite.....	108
4.6.1 Time-dependent lab tests.....	108
4.6.1.1 Mode-I crack growth tests.....	108
4.6.1.2 Uniaxial compressive creep tests	109
4.6.2 Simulation for time-dependent lab tests	110
4.6.2.1 Simulation of Mode-I crack growth tests	110
4.6.2.2 Simulation of uniaxial compressive creep tests	114
4.6.2.3 Evolution of damage indices	117
4.7 Conclusions	118
5 Applications of numerical models.....	121
5.1 Introduction	121
5.2 Numerical analysis of a sandstone landscape arch.....	121
5.2.1 Model set up	121
5.2.2 Factor of safety calculation	122
5.2.3 Fracture evolution with time elapsing	124

5.3 Numerical simulation for time-dependent damage around a tunnel	127
5.3.1 Model set-up.....	127
5.3.2 Simulation results for time-dependent damage	128
5.4 Conclusions	130
6 Conclusions and outlook	131
6.1 Conclusions	131
6.2 Main contributions of the thesis.....	134
6.3 Recommendations for future research.....	135
