2014 International Conference on Virtual Reality and Visualization (ICVRV 2014)

Shenyang, China
30-31 August 2014
# Table of Contents

**Message from the Technical Program Chairs** ................................................................. xi
**Organizing Committee** ........................................................................................................ xiii
**Steering Committee** ......................................................................................................... xiv
**Technical Program Committee** ........................................................................................ xv
**Keynote Addresses** ............................................................................................................. xvii
**Sponsors** ............................................................................................................................ xxvi

## Regular Papers

A Novel Networked Marine Engine Simulator for Crew Operation Examination with Auto Evaluation Using Virtual Reality Technology ................................................................. 1

*Jianbo Sun, Qiaofen Zhang, Danghe Huang, and Lingjie Zhang*

The Teleoperation Simulation System Based on VR .................................................................. 7

*Li Bo, Cao Fuyi, and Lv Jinfeng*

College Teaching Quality Assessment Based on Group Consensus ....................................... 12

*Xiang-qin Liu and Xia Chen*

K-Coherence Terrain Texture Upscaling Using Gabor Wavelets .......................................... 18

*Zhongwei Jin and Dan Wu*

Color Calibration with Isolated Distortion Pixels Removal Based on Human Visual Characteristics ........................................... 24

*Yaping Zhang, Can Xie, and Xu Chen*

Distributed Multi-GPU Accelerated Hybrid Parallel Rendering for Massively Parallel Environment .............................................. 30

*Yi Cao, Huawei Wang, and Zhiwei Ai*

Real-Time Light Field Rendering for Multi-projector 3D Display ........................................ 37

*Chen Qin, Chao Peng, Jia Lu, and Wenhua Dou*

Vector Field Visualization Review and Prospects ................................................................. 43

*Li Chao and Wu Lingda*
A Survey on Recent Approaches of Mesh Compressions ................................................................. 50
   Huayu Li, Weiliang Meng, and Xiaopeng Zhang

Animation of Refitted 3D Garment Models for Reshaped Bodies ............................................. 58
   Yifan Yan, Juntao Ye, Xiaoyang Zhu, and Jituo Li

VR&AR Combined Manual Operation Instruction System on Industry Products:
   A Case Study .................................................................................................................................. 65
   Xuyue Yin, Yan Gu, Shiguang Qiu, and Xiumin Fan

Nonlinear Revision Control for Web-Based 3D Scene Editor ......................................................... 73
   Zhenhai Wang, Hongming Cai, and Fenglin Bu

Multiplayer Collaborative Training System Based on Mobile AR Innovative Interaction Technology ........................................................................................................... 81
   Liao Yangguang, Liu Yue, and Wei Xiaodong

Spiculation Quantification Method Based on Edge Gradient Orientation
   Histogram ....................................................................................................................................... 86
   Guodong Zhang, Nan Xiao, and Wei Guo

Vehicle Network Dynamic Trust Model (VNDTM) ........................................................................... 92
   Dongyang Bao, Xiguang Li, and Mengfei Li

A Sentiment Analysis Method for Facial Expression Generation in Human-Robot Interactive Communication ........................................................................................................... 97
   Yu Bai, Xiaoli Tang, Yaohui Zhu, and Dongfeng Cai

Crowd Simulation for Evacuation Behaviors Based on Multi-agent System and Cellular Automaton ................................................................................................................ 103
   Yue-Wen Fu, Jia-Hong Liang, Quan-Ping Liu, and Xiao-Qian Hu

Research of Collaborative Interactive Visualization for Medical Imaging .................................... 110
   Fuli Wu and Tong Zhang

Figure-Aware Tracking under Occlusion from Monocular Videos .................................................. 116
   Xue Wang and Qing Wang

Human Head-Shoulder Illumination Transfer .................................................................................. 122
   Zhihong Fang, Hongyu Wu, Changjian Chi, and Xiaowu Chen

A Hybrid Visual Analytics Approach to Dynamic Space-Based Networks ................................... 130
   Huaquan Hu, Hanchen Song, Lingda Wu, and Ronghuan Yu

Single-View Dressed Human Modeling via Morphable Template ............................................... 138
   Lin Wang, Kai Jiang, Bin Zhou, Qiang Fu, Kan Guo, and Xiaowu Chen

Computer-Generated Batik Crack in Real Time .............................................................................. 146
   Yu Yangtao and Xu Dan

An Improved Algorithm for QR Code Image Binarization .............................................................. 154
   Weijun Zhang and Tianrui Yang
Image-Based Hierarchical Method of 3D Model Retrieval ................................................................. 160
   Yongjian Lian and Xukun Shen

Structure-Based Object Classification and Recognition for 3D Scenes in Point
Clouds ............................................................................................................................................... 166
   Xiaojuan Ning, Yinghui Wang, Wen Hao, Minghua Zhao, Liansheng Sui,
   and Zhenghao Shi

Textile Image Segmentation through Region Action Graph and Novel Region
Merging Strategy ................................................................. 174
   Huorong Luo and Shiguang Liu

Matching Cost Fusion in Dense Depth Recovery for Camera-Array via Global
Optimization ................................................................................................................................. 180
   Lipeng Si, Qing Wang, and Zhaolin Xiao

Effects on Performance of Analytical Tools for Visually Demanding Tasks
through Direct and Indirect Touch Interaction in an Immersive Visualization ...................... 186
   Zhibo Sun, Ashish Dhital, Nattaya Areemakasem, Neera Pradhan, and Amy Banic

Virtual Changbai Mountain Scenery Display System Based on AR ............................................. 194
   Shuangshuang Guo, Liguo Zheng, Tiesheng Fan, Minghui Sun, Zhigeng Pan,
   and Jian Chen

An Adjustable Polygon Connecting Method for 3D Mesh Refinement ..................................... 202
   Yinghui Wang, Wen Hao, Xiaojuan Ning, Zhenghao Shi, and Minghua Zhao

Short Papers

Streaming Location-Based Panorama Videos into Augmented Virtual
Environment ................................................................................................................................. 208
   Yi Zhou, Peifu Liu, Jingdi You, and Zhong Zhou

View Selection of 3D Objects Based on Saliency Segmentation ............................................. 214
   Honglei Han, Jing Li, Wencheng Wang, Huiwen Zhao, and Miao Hua

The Extraction of Feature Lines on 3D Models: A Survey ...................................................... 220
   Weize Quan, Weiliang Meng, and Xiaopeng Zhang

A Lagrange Equations-Based Hair Simulation Method ............................................................ 226
   Yongtang Bao and Yue Qi

Incorporating Part Appearances Symmetry for Human Pose Estimation ................................ 231
   Xiang-bin Shi, Meng Wang, Qin Dai, De-yuan Zhang, and Xiao Ding

Modeling and Analysis of Patching Structured Benign Worms Counteracting
against Worms ............................................................................................................................. 236
   Hanxun Zhou, Wei Guo, and Guodong Zhang

A Compressed Sensing Stepped Frequency GPR Imaging Method in Ground
Clutter Environment .................................................................................................................. 242
   Sun Yanpeng, Bai Wenjing, Zhang Shi, and Qu Lele
A Method to Reduce Samples for Support Vector Machines

Guodong Zhang, Ju Zhou, and Wei Guo..................................................248

Automatic Image Annotation with Real World Noisy Data

Feng Tian and Xukun Shen.................................................................254

Learning Label Set Relevance for Search Based Image Annotation

Feng Tian and Xukun Shen.................................................................260

Multi-scale Pedestrian Detection by Use of AdaBoost Learning Algorithm

Wei Guo, Ya Xiao, and Guodong Zhang...............................................266

Stereoscopic Image Recoloring via Consistent Intrinsic Decomposition

Jingjing Kang, Bo Jiang, Jianhui Chen, and Xinguo Liu............................272

LLE Coordinates for Image Blending

Yufeng Tang, Dongqing Zou, Feng Ding, Jianwei Li, and Xiaowu Chen.............278

Articulated Pose Estimation with Global Body Orientation

Dai Qin, Qiao Jianzhong, Liu Fang, Shi Xiangbin, Zhang Deyuan, and Dai Qin....284

A Scale-Invariant Diffusion Distance for Non-rigid Shape Analysis

Kang Wang, Zhongke Wu, Taorui Jia, Sajid Ali, Junli Zhao, Guoliang Yang, and Mingquan Zhou.................................................................290

A Multi-layer Approach for Interactive Path Planning Control in Virtual Reality

Simulation...............................................................................................296

Simon Cailhol, Philippe Fillatreau, Jean-Yves Fourquet, and Yingshen Zhao........296

Rotation Entropy-Based Vortex Identification

Huai-Hui Wang, Si-Kun Li, and Liang Zeng.............................................302

Lightweight Scene Management for Real-Time Visualization of Underground

Scene Based on Web3D............................................................................308

Xiaojun Liu, Jinyuan Jia, and Junqiao Zhao.............................................308

Feature Extraction and Analysis for Scientific Understanding of Visual Art

Zhang Yi, Pu Yuanyuan, Xu Dan, Zhu Juan, Zhang Hanwen, and Tian Yurou.....314

Discriminative Feature Learning for Video Semantic Segmentation

Han Zhang, Kai Jiang, Yu Zhang, Qing Li, Changqun Xia, and Xiaowu Chen....321

Simulation of Cloth with Low Stretch....................................................327

Min Shi.................................................................................................327

Image Enlargement Using Repetitive Component Multiplication

Zhengzhe Liu, Xiaojuan Qi, Bin Sheng, Wen Wu, Ping Li, and Lizhuang Ma.....333

Method of Pulmonary Fissure Segmentation Based on Fuzzy Distance

Transform...............................................................................................339

Su Gao and Liu Wang..............................................................................339
Robust Filtering for Networked Control Systems with Finite Frequency
Hongping Yang and Haihua Lv

Research on Cooperative Control of Human-Computer Interaction Tools
with High Recognition Rate Based on Neural Network
Shi Heng and Dong Yunfeng

Image Demosaicking Using Chromatic-Preserved Kernel Regression
Zhengrong Zhang, Hongyi Liu, Liang Xiao, and Zhihui Wei

Application of Sparse Database in Multimedia Management and Retrieval
Li Chao and Wu Lingda

Analysis on the Comparison Methods of Two Sorted Lists in Total-Order Set
Fu Baiwen and Sun Lianying

Parameterized Rendering for Multiresolution Terrain Structure
Zhongwei Jin and Dan Wu

Growth Visualization of Chinese Fir Based on Improved 3-PG Model
Liyan Ma and Huaiqing Zhang

A Robust Image Mosaic Method Based on Graph-Model Optimization
Wang Zhicheng, Zhu Zewei, and Zhao Weidong

Variational Image Matting with Local and Nonlocal Operators
Wenqiao Zhu, Changyu Diao, Min Li, Dongming Lu, and Yu Liu

Visual Models of Time-Varying Topology of Space-Based Networks
Hu Huaquan, Song Hanchen, Wu Lingda, and Yang Chao

Design of a CAN Card Model Based on KD-DRT
Song Li, Xinyu Yao, Wenbo Wu, and Qiang Zhang

Editing Fluid Sequences Using Space Warping Technique
Bosheng Zhou, Qing Zuo, and Yue Qi

YaRep: A Personal 3D Printing Simulator
Xun Luo, Jingwen Wang, Nan Liu, Zhichen Zhao, and Yichen Zhou

A Face Matching Method Based on Biometric for Surgical Navigation System
Xiaorui Fang, Xukun Shen, and Yong Hu

Key Technologies Researched on VP and GLS for Virtual CNC Machine
System
Ying Gao, Pengfei Zhi, and Fei Ge

The Study of the Terrain Rendering Method Based on Ray Casting
Biao Dong and Xunkun Shen

An Angle Bending Constraint Model for Position-Based Dynamics
Yifeng Wang, Xiaoting Wu, and Gang Wang
Simulation Research on Wind Shear Prediction of Airborne Weather Radar ........................................435
   Jie Gao and Yongjia Zhao

Shape Retrieval Based on Centroid Distance Ratio and Shape Context ........................................439
   Shujun Zhang and Longzhuo Li

Gender Identification Using SVM Based on Human Face Images .....................................................444
   Li Fei, Wang Yajie, Qiu Hongkun, and Wang Linlin

An Improved Meshless Method in Virtual Surgery Simulation ..........................................................449
   Zhu Ling, Yu Ying, Zhang Baoquan, and Wang Lijing

Research on Hierarchical Modeling of Simulation Model of Cloud Simulation Platform ........................455
   Dongfang Zhu, Pengyuan Liu, and Qunxing Su

Visual Simulation Technique of Decision Making of Interactive Stand Management Methods ..................459
   Yongliang Li, Huaiqing Zhang, Hongbo Ju, and Xian Jiang

Relic Positioning Using Shape Matching in Archaeological Site .....................................................467
   Li Jijunnan and Geng Guohua

Generating Image Sequences of Augmented Road Scenarios ...........................................................473
   Huan Zhao, Yuehu Liu, Chi Zhang, Danchen Zhao, and Feng Xu

Author Index .........................................................................................................................................478
