

Development and Application of New Small Scale Cultivation Systems with Online Monitoring Capabilities

Von der Fakultät für Maschinenwesen der Rheinisch-Westfälischen Technischen
Hochschule Aachen zur Erlangung des akademischen Grades einer Doktorin der
Ingenieurwissenschaften genehmigte Dissertation

vorgelegt von

Bettina Luchterhand

Berichter: Universitätsprofessor Dr.-Ing. Jochen Büchs
Universitätsprofessor Dr. rer. nat. Michael Bott

Tag der mündlichen Prüfung: 09.10.2015

Contents

Nomenclature	IX
List of Figures	XII
List of Tables	XV
1. Introduction	1
1.1. Small-scale cultivation techniques	1
1.2. <i>Gluconobacter oxydans</i>	2
1.3. Bioimpedance	5
1.4. Main objectives	8
2. Characterization of terminal oxidase mutants of <i>G. oxydans</i> 621H	10
2.1. Introduction	10
2.2. Material and methods	12
2.2.1. Materials	12
2.2.2. Bacterial strains, plasmids, and media	12
2.2.3. Cloning and DNA techniques	13
2.2.4. Construction of in-frame deletion mutants	13
2.2.5. Complementation studies	14
2.2.6. Characterization of respiration activity and growth	15
2.2.7. H ⁺ /O measurements	16
2.2.8. Respirometry	17
2.2.9. Determination of substrate and product concentrations by HPLC analysis	17
2.3. Results	18
2.3.1. Construction of <i>G. oxydans</i> mutants lacking terminal oxidases	18
2.3.2. Growth and respiration activity	18
2.3.3. Respirometry	23
2.3.4. H ⁺ /O ratio measurements	24
2.3.5. Complementation of terminal oxidases	25
2.4. Discussion	26
3. Quantifying the osmotic sensitivity of <i>G. oxydans</i> ATCC 621H and DSM 3504	31
3.1. Introduction	31

3.2. Material and methods	33
3.2.1. Chemicals	33
3.2.2. Microorganisms	33
3.2.3. Media and cultivation	33
3.2.4. Measurement of respiration activity	35
3.2.5. Sampling and offline analysis	35
3.2.6. Calculation of osmolality, water activity and osmotic pressure	36
3.2.7. The Davey model	38
3.3. Results and discussion	38
3.3.1. Buffer screening	38
3.3.2. Comparison of unbuffered and CaCO ₃ -buffered cultivation of <i>G. oxydans</i> ATCC 621H	44
3.3.3. Cultivation of sp. <i>G. oxydans</i> ATCC 621H in soluble buffers MES, PIPPS and citrate	46
3.3.4. Determination of osmotic sensitivity by addition of salts to CaCO ₃ -buffered cultivations	49
3.3.5. Growth of <i>G. oxydans</i> as a function of water activity	52
3.4. Conclusion	57
4. Impedance spectroscopy in microtiter plates	58
4.1. Introduction	58
4.2. Material and methods	59
4.2.1. Chemicals	59
4.2.2. Microorganisms and media	60
4.2.3. First prototype for impedance spectroscopy	60
4.2.4. Improved impedance spectroscopy setup	62
4.2.5. Procedure for system compensation	63
4.2.6. Validation and characterization of the measuring setup	66
4.2.7. Biocompatibility tests	67
4.2.8. Preparation and impedance measurement of defined cell suspensions	67
4.2.9. Fermentations	68
4.2.10. Offline Analysis	69
4.3. Results	71
4.3.1. Preliminary impedance measurements with the first prototype	71
4.3.2. Validation of the improved measurement setup	72

4.3.3. Determination of the cell constants	73
4.3.4. Run-in period	74
4.3.5. Long-term experiments with KCl solutions	75
4.3.6. Biocompatibility	77
4.3.7. Measurement of defined cell suspensions	78
4.3.8. Fermentation of <i>Hansenula polymorpha</i>	86
4.4. Discussion	88
5. Summary	92
6. Outlook	93
References	95
