Macroscopic and Large Scale Phenomena: Coarse Graining, Mean Field Limits and Ergodicity

 Springer

Contents

1	On the Dynamics of Large Particle Systems in the Mean Field Limit	1
	François Golse	
1.1	Examples of Mean Field Models in Classical Mechanics	3
1.1.1	The Liouville Equation	4
1.1.2	The Vlasov-Poisson System	5
1.1.3	The Euler Equation for Two-Dimensional Incompressible Fluids	9
1.1.4	The Vlasov-Maxwell System	10
1.2	A General Formalism for Mean Field Limits in Classical Mechanics	12
1.3	The Mean Field Characteristic Flow	16
1.4	Dobrushin's Stability Estimate and the Mean Field Limit.	24
1.4.1	The Monge-Kantorovich Distance	24
1.4.2	Dobrushin's Estimate.	25
1.4.3	The Mean Field Limit	29
1.4.4	On the Choice of the Initial Data	31
1.5	The BBGKY Hierarchy and the Mean Field Limit	35
1.5.1	N -Particle Distributions	36
1.5.2	Marginal Distributions of Symmetric N -Particle Distributions.	38
1.5.3	The N -Particle Liouville Equation	41
1.5.4	The BBGKY Hierarchy	44
1.5.5	The Mean Field Hierarchy and Factorized Distributions.	51
1.6	Chaotic Sequences, Empirical Measures and BBGKY Hierarchies.	55
1.6.1	Chaotic Sequences and Empirical Measures	56
1.6.2	From Dobrushin's Theorem to the BBGKY Hierarchy	62

1.7	Further Results on Mean Field Limits in Classical Mechanics	65
1.7.1	Propagation of Chaos and Quantitative Estimates	65
1.7.2	Infinite Hierarchies and Statistical Solutions	67
1.7.3	Symmetric Functions of Infinitely Many Variables	74
1.7.4	The Case of Singular Interaction Kernels	77
1.7.5	From Particle Systems to the Vlasov-Maxwell System.	79
1.8	The Mean Field Problem in Quantum Mechanics	82
1.8.1	The N -Body Problem in Quantum Mechanics.	82
1.8.2	The Target Mean Field Equation.	87
1.8.3	The Formalism of Density Matrices.	88
1.9	Elements of Operator Theory	94
1.10	The BBGKY Hierarchy in Quantum Mechanics	100
1.10.1	The Quantum BBGKY Hierarchy	101
1.10.2	The Infinite Quantum Mean Field Hierarchy.	105
1.11	The Mean Field Limit in Quantum Mechanics and Hartree's Equation	110
1.11.1	Mathematical Statement of the Mean Field Limit	110
1.11.2	A Tool for Studying Infinite Hierarchies	113
1.11.3	Application to the Hartree Limit in the Bounded Potential Case.	119
1.12	Other Mean Field Limits in Quantum Mechanics	122
1.12.1	Derivation of the Schrödinger-Poisson Equation	122
1.12.2	Derivation of the Nonlinear Schrödinger Equation.	124
1.12.3	The Time-Dependent Hartree-Fock Equations.	125
1.12.4	Pickl's Approach to Quantum Mean Field Limits	130
1.13	Afterword	138
	References.	140
2	Continuum Limits of Discrete Models via Γ-Convergence.	145
	Lucia Scardia	
2.1	Introduction	145
2.2	Preliminaries	147
2.2.1	Γ -Convergence.	147
2.2.2	Coerciveness	149
2.2.3	Lower Semicontinuity and Relaxation	152
2.3	Discrete Systems: Short-Range Interactions	155
2.3.1	One-Dimensional Discrete Setting	155
2.3.2	Nearest-Neighbour Interactions	156
2.3.3	Non-convex and Superlinear Interaction.	162
2.3.4	Lennard-Jones Interactions	164

2.4	Discrete Systems: Long-Range Interactions	169
2.4.1	Next-to-Nearest-Neighbour Interactions	170
2.4.2	Long-Range Interactions: The Case of Dislocations . . .	174
2.5	Further Directions	179
2.5.1	Asymptotic Expansion via Γ -Convergence	179
2.5.2	Equivalence by Γ -Convergence.	181
2.5.3	Empirical Measures Approach	182
2.5.4	Rate-Independent and Gradient Flow Evolutions	183
2.6	Exercises	183
	References.	185
3	On Evolutionary Γ-Convergence for Gradient Systems.	187
	Alexander Mielke	
3.1	Introduction	187
3.2	Gradient Systems and Γ -Convergence	192
3.2.1	Gradient Systems from the Modeling Point of View	192
3.2.2	Γ -Convergence for (Static) Functionals	196
3.2.3	Prerequisites from Convex Analysis	199
3.2.4	Definitions for Γ -Convergence of Evolutionary Systems	201
3.2.5	An ODE Example	202
3.2.6	Homogenization of a 1D Parabolic Equation.	204
3.2.7	Tartar’s Model Equation	206
3.2.8	Further Examples of Gradient Systems.	207
3.3	pE-Convergence via the Energy-Dissipation Principle	209
3.3.1	Four Equivalent Formulations via Legendre Transform	210
3.3.2	pE-Convergence Obtained from Mosco Convergence.	212
3.3.3	The Sandier-Serfaty Approach to pE-Convergence . . .	216
3.3.4	More General Results on pE-Convergence Using the EDP	218
3.3.5	Applications for pE-Convergence Based on the EDP.	219
3.4	E-Convergence Using Evolutionary Variational Estimates	227
3.4.1	The Simplest Case: Quadratic Convex Functionals . . .	227
3.4.2	Linear Parabolic Homogenization via E-Convergence	230
3.4.3	Metric Gradient Systems and IEVE_λ	232
3.4.4	E-Convergence for Metric Gradient Systems.	235

3.5	Rate-Independent Systems (RIS)	237
3.5.1	Subdifferential Formulation of RIS	237
3.5.2	Energetic Solutions of RIS	239
3.5.3	pE-Convergence for Energetic Solutions	240
	References	246
4	Homoclinic Points of Principal Algebraic Actions	251
	Martin Göll and Evgeny Verbitskiy	
4.1	Introduction	251
4.1.1	Historic Perspective	251
4.1.2	Spatial Dynamics and Group Actions	252
4.1.3	Algebraic Dynamics	255
4.1.4	Homoclinic Points in Algebraic Dynamical Systems	260
4.1.5	Outline	261
4.2	Principal Algebraic Actions	262
4.2.1	Integer Group Rings	262
4.2.2	The Definition of a Principal Algebraic Action	264
4.2.3	Examples	265
4.3	Expansive Algebraic Actions	266
4.4	Homoclinic Points of Non-expansive Actions	271
4.4.1	Lattices $\Gamma = \mathbb{Z}^d$	271
4.4.2	Non-abelian Groups	273
4.4.3	Discrete Heisenberg Group	274
4.5	Topological Entropy of Algebraic Actions	275
4.6	Structure and Associated Dynamics of the Homoclinic Group	277
4.6.1	Structure of the Homoclinic Group	278
4.6.2	Adjoint Actions	279
4.7	Homoclinic Points and Applications	279
4.7.1	Symbolic Covers	279
4.7.2	Entropy and Periodic Points	283
4.7.3	Specification Property	285
4.7.4	Local Entropy Theory	286
4.7.5	Central Limit Theorems	287
