

Charge transport through Biphenyl and Ferrocene based Single-Molecule Junctions

Von der Fakultät für Mathematik und Physik
der Gottfried Wilhelm Leibniz Universität Hannover
zur Erlangung des Grades
Doktor der Naturwissenschaften
Dr. rer. nat.
genehmigte Dissertation
von

M.Sc. Karthiga Kanthasamy
2016

Contents

1	Introduction	1
1.1	Molecular Electronics	3
1.2	Challenges	6
1.3	Dissertation Outline	7
2	Theory and Instrumentation	9
2.1	Characteristic length scales and transport regimes	10
2.1.1	Diffusive transport	11
2.1.2	Semiclassical approximation for ballistic transport	12
2.1.3	Quantum Ballistic transport	14
2.1.4	Vacuum Tunneling	18
2.2	Molecular orbitals	22
2.3	Charge transport	23
2.3.1	Coherent tunneling	24
2.3.2	Fano resonances	29
2.3.3	Incoherent tunneling	31
2.4	Electrode-molecule interactions	31
2.5	Transport based on coupling	33
2.6	Theoretical Simulations	36
3	Experimental methods	39
3.1	Mechanically Controllable Break Junction (MCBJ)	40
3.1.1	Working Principle	41
3.2	Sample Fabrication	42
3.2.1	Mechanical cutting	42
3.2.2	Electron beam lithography	43
3.3	Molecules	48
3.4	XPS measurement	50
3.5	Description of the measurement set up	50
3.5.1	Measurement electronics and wiring	52
3.6	Measurement methods	53
3.6.1	Conductance at constant voltage	54
3.6.2	I-V measurements	55
4	Atomic point contacts	57

4.1	Quantized Conductance	58
4.2	Stability of the junction	63
4.3	Conductance histogram	66
4.4	Cross check for reduction factor	68
4.5	I-V measurements	70
5	Transport through molecular junctions	73
5.1	Biphenyl molecules	74
5.1.1	XPS measurements	75
5.1.2	Conductance measurements	77
5.1.3	I-V measurements	80
5.1.4	Single level model	82
5.1.5	Conclusion	84
5.2	Ferrocene molecules	85
5.3	FDA	89
5.3.1	Conductance Measurements	89
5.3.2	I-V measurements	91
5.3.3	Theoretical Results	93
5.3.4	Two-Level Model versus Effective Single-Level Model	95
5.3.5	Discussion	98
5.3.6	Conclusion	100
5.4	FDT and FBPDT	100
5.4.1	Conductance measurements	101
5.4.2	FDT - I-V measurements	104
5.4.3	FDT - I-V analysis	104
5.4.4	FDT - Theoretical results	107
5.4.5	FDT - Discussion	109
5.4.6	FDT - Conclusion	113
5.4.7	FBPDT - I-V measurements	114
5.4.8	FBPDT - Theoretical simulations	115
5.4.9	FBPDT - Discussion	118
5.4.10	FBPDT - Conclusion	119
6	Summary and Outlook	121
6.1	Summary	122
6.2	Outlook	124
	List of Figures	139
	List of Tables	142

A Instrumentation	143
A.1 Scanning Electron Microscope (SEM)	143
A.1.1 Working Principle	144
A.1.2 Components	145
A.2 X-ray Photoelectron Spectroscopy (XPS)	147
A.2.1 Working principle	147
A.2.2 Quantitative analysis	148
A.3 Reactive Ion etching	151
B Synthesis of ferrocene molecules	153
B.1 General procedure	153
B.1.1 Synthesis of 1,1' Ferrocene dithiol	153
B.1.2 Synthesis of 1,1' Ferrocene diamine	155
B.1.3 Synthesis of 1,1'-bis[(4-thioacetylphenyl)]-ferrocene	157
