Directed Polymers in Random Environments

École d'Été de Probabilités de Saint-Flour
XLVI – 2016

 Springer

Contents

1	Introduction	1
1.1	Polymer Models	1
1.1.1	Random Walk in Random Environment: A Model for Directed Polymers	1
1.1.2	Modelization: Polymer in an Emulsion with Repulsive Impurities.....	3
1.1.3	Polymers Viewed as Percolation at a Positive Temperature.....	4
1.1.4	Exponents and Localization.....	5
1.2	Particle in a Random Potential.....	5
1.2.1	Particle in Deadly Obstacles	6
1.2.2	Branching Random Walk Picture	8
1.3	History, Experiments and Related Models	9
1.4	Highlights.....	11
2	Thermodynamics and Phase Transition	13
2.1	Preliminaries.....	13
2.1.1	Markov Property and the Partition Function	14
2.1.2	The Polymer Measure as a Markov Chain	14
2.2	Free Energy	15
2.3	Upper Bounds	18
2.3.1	The Annealed Bound	18
2.3.2	Improving the Annealed Bound	20
2.4	Monotonicity	24
2.5	Phase Transition	27
3	The Martingale Approach and the L^2 Region	31
3.1	A Martingale Associated to the Partition Function	31
3.2	The Second Moment Method and the L^2 Region	35
3.3	Diffusive Behavior in L^2 Region.....	38
3.4	Local Limit Theorem in the L^2 Region.....	44

3.5	Analytic Functions Method: Energy and Entropy in the L^2 Region	47
3.6	Concentration Revisited	51
3.6.1	Inside the L^2 Region	51
3.6.2	General Case: Sublinear Variance Estimate	52
3.7	Rate of Martingale Convergence	53
4	Lattice Versus Tree	57
4.1	A Mean Field Approximation.....	57
4.2	Majorizing Lattice Polymers by m -Tree Polymers	61
4.3	Phase Diagram on the Tree	62
4.4	Free Energy is Strictly Convex for the Polymer on the Lattice	67
4.5	Conclusions and Related Models	72
5	Semimartingale Approach and Localization Transition	75
5.1	Semimartingale Decomposition	75
5.2	Weak Disorder and Diffusive Regime	82
5.3	Bounds on the Critical Temperature by Size-Biasing.....	84
5.4	Localization Versus Delocalization	87
6	The Localized Phase	91
6.1	Path Localization	91
6.2	Low Dimensions.....	93
6.2.1	Overlap Estimates	94
6.2.2	Fractional Moments Estimates.....	95
6.3	Simulations of the Localized Phase	96
6.4	Localization for Heavy-Tails Environment.....	100
6.4.1	The Big Picture	100
6.4.2	The Results	102
6.4.3	Characteristic Exponents and Flory Argument.....	105
7	Log-Gamma Polymer Model	107
7.1	Log-Gamma Model and its Stationary Version	107
7.2	Free Energy and Fluctuations for the Stationary Model	112
7.3	Model Without Boundaries	115
7.4	Localization in the Log-Gamma Polymer with Boundaries	117
7.5	Final Remarks and Complements.....	124
8	Kardar-Parisi-Zhang Equation and Universality	127
8.1	Kardar-Parisi-Zhang Equation	128
8.2	Hopf-Cole Solution.....	130
8.3	The Continuum Random Polymer (CRP)	133
8.3.1	Properties of \mathcal{Z}_β	134
8.3.2	The Law of the Continuum Random Polymer	137
8.4	Intermediate Disorder Regime for Lattice Polymers	139
8.5	Fluctuations and Universality	144
8.5.1	Additional Remarks	146

9 Variational Formulas	147
9.1 Free Energy Revised: A More Detailed Account	148
9.2 Large Deviation Principle for the Polymer Endpoint	151
9.3 Cocycle Variational Formula for the Point-to-Level Case	153
9.4 Tilt-Velocity Duality	162
9.5 Busemann Functions and Minimizing Cocycles	163
9.6 Gibbs' Variational Formulas: Energy/Entropy Balance	168
9.7 Variational Formula with a Functional Order Parameter	170
A Toolbox for Random Medium and Gibbs Measures	173
A.1 Superadditive Lemmas	173
A.2 Concentration Inequalities for Martingales with Bounded Increments	174
A.3 Gaussian Laws	177
A.3.1 Concentration	178
A.3.2 Integration by Parts	180
A.3.3 Slepian's Lemma	182
A.4 Correlation Inequalities	183
A.5 Local Limit Theorem for the Simple Random Walk	184
A.6 Perron-Frobenius Eigenvalue of a Nonnegative Matrix	185
A.7 Linear Differential Equations: Duhamel Form	186
References	187
Index	197
