Rational Points on Varieties

Bjorn Poonen

American Mathematical Society
Providence, Rhode Island

Contents

Preface	ix
§0.1. Prerequisites	ix
§0.2. What kind of book this is	ix
§0.3. The nominal goal	x
§0.4. The true goal	x
§0.5. The content	x
§0.6. Anything new in this book?	xii
§0.7. Standard notation	xiii
§0.8. Acknowledgments	xiv
Chapter 1. Fields	1
§1.1. Some fields arising in classical number theory	1
§1.2. C_r fields	3
§1.3. Galois theory	8
§1.4. Cohomological dimension	12
§1.5. Brauer groups of fields	16
Exercises	27
Chapter 2. Varieties over arbitrary fields	31
§2.1. Varieties	32
§2.2. Base extension	32
§2.3. Scheme-valued points	37
§2.4. Closed points	45
§2.5. Curves	47

§2.6. Rational points over special fields	49
Exercises	53
Chapter 3. Properties of morphisms	57
§3.1. Finiteness conditions	57
§3.2. Spreading out	60
§3.3. Flat morphisms	66
§3.4. Fppf and fpqc morphisms	68
§3.5. Smooth and étale morphisms	69
§3.6. Rational maps	92
§3.7. Frobenius morphisms	95
§3.8. Comparisons	97
Exercises	97
Chapter 4. Faithfully flat descent	101
§4.1. Motivation: Gluing sheaves	101
§4.2. Faithfully flat descent for quasi-coherent sheaves	103
§4.3. Faithfully flat descent for schemes	104
§4.4. Galois descent	106
§4.5. Twists	109
§4.6. Restriction of scalars	114
Exercises	116
Chapter 5. Algebraic groups	119
§5.1. Group schemes	119
§5.2. Fppf group schemes over a field	125
§5.3. Affine algebraic groups	130
§5.4. Unipotent groups	131
§5.5. Tori	134
§5.6. Semisimple and reductive algebraic groups	136
§5.7. Abelian varieties	142
§5.8. Finite étale group schemes	150
§5.9. Classification of smooth algebraic groups	151
§5.10. Approximation theorems	154
§5.11. Inner twists	155
§5.12. Torsors	156
Exercises	164

Chapter 6. Étale and fppf cohomology	169
§6.1. The reasons for étale cohomology	169
§6.2. Grothendieck topologies	171
§6.3. Presheaves and sheaves	173
§6.4. Cohomology	178
§6.5. Torsors over an arbitrary base	182
§6.6. Brauer groups	190
§6.7. Spectral sequences	196
§6.8. Residue homomorphisms	200
§6.9. Examples of Brauer groups	203
Exercises	207
Chapter 7. The Weil conjectures	209
§7.1. Statements	209
§7.2. The case of curves	210
§7.3. Zeta functions	211
§7.4. The Weil conjectures in terms of zeta functions	213
§7.5. Cohomological explanation	214
§7.6. Cycle class homomorphism	222
§7.7. Applications to varieties over global fields	226
Exercises	229
Chapter 8. Cohomological obstructions to rational points	231
§8.1. Obstructions from functors	231
§8.2. The Brauer–Manin obstruction	233
§8.3. An example of descent	240
§8.4. Descent	244
§8.5. Comparing the descent and Brauer–Manin obstructions	250
§8.6. Insufficiency of the obstructions	253
Exercises	258
Chapter 9. Surfaces	261
§9.1. Kodaira dimension	261
§9.2. Varieties that are close to being rational	263
§9.3. Classification of surfaces	271
§9.4. Del Pezzo surfaces	279
§9.5. Rational points on varieties of general type	290

Exercises	293
Appendix A. Universes	295
§A.1. Definition of universe	295
§A.2. The universe axiom	296
§A.3. Strongly inaccessible cardinals	296
§A.4. Universes and categories	297
§A.5. Avoiding universes	297
Exercises	298
Appendix B. Other kinds of fields	299
§B.1. Higher-dimensional local fields	299
§B.2. Formally real and real closed fields	299
§B.3. Henselian fields	300
§B.4. Hilbertian fields	301
§B.5. Pseudo-algebraically closed fields	302
Exercises	302
Appendix C. Properties under base extension	303
§C.1. Morphisms	303
§C.2. Varieties	308
§C.3. Algebraic groups	308
Bibliography	311
Index	331
