Contents

Preface and acknowledgements .................................................. 13

Introduction .................................................................................. 15
  1.1. The maritime aspects of Late Iron Age society ........................................ 15
  1.2. Purpose and questions ................................................................ 15
    1.2.1. The ship and the society ............................................................. 15
    1.2.2. Finding the people in the boat ................................................... 15
    1.2.3. Tracing contacts and cultural connections ...................................... 16
    1.2.4. Technology and society .............................................................. 16
    1.2.5. Ships and seafaring ................................................................. 16
  1.3. Material .................................................................................. 17
  1.4. The theoretical journey from the past to the present and back again .......... 18
    1.4.1. From the soil to the researcher: obstacles and possibilities .................. 18
    1.4.2. Interpreting the past by analogy .................................................... 19
    1.4.3. A historical ethnoarchaeology .................................................... 19
    1.4.4. Reading the material ................................................................. 19
    1.4.5. Knowledge by experience and practice .......................................... 20
    1.4.6. The archaeologist and the past ...................................................... 20
  1.5. Earlier research ....................................................................... 21
  1.6. The ships, from a contemporary myth to a past reality .......................... 24
    1.6.1. The myth of the large ship ........................................................... 24
    1.6.2. The myth of the seafarers ............................................................ 26
  1.7. From the ships to the society .................................................... 26

2. THE SHIP-ARCHAEOLOGICAL MATERIAL OF CENTRAL SWEDEN FROM
   THE LATE IRON AGE ................................................................... 30
  2.1. Remains of boats and ships in the archaeological material ...................... 30
    2.1.1. The find-spots ....................................................................... 30
    2.1.2. The sizes and types of boats ..................................................... 30
    2.1.3. The social context of the boat finds .............................................. 33
  2.2. The Viks boat ............................................................................ 34
    2.2.1. Find conditions .................................................................... 34
    2.2.2. Dating .................................................................................. 34
    2.2.3. Reconstruction ....................................................................... 35
    2.2.4. Ship-technological analysis of the construction ................................ 37
    2.2.5. Size and shape ....................................................................... 39
    2.2.6. The Viks boat and the principles for interpreting the shape and size of the burial boats .......................................................... 39
    2.2.7. Reinterpretation of the boat in the burial Valsgärde 7, based on an analogy with the Viks boat ......................................................... 41
    2.2.8. Reinterpreting the boat in the burial Gamla Uppsala 7 on the basis of an analogy with the Viks boat .................................................. 43
  2.3. The boats in the burials of central Sweden in the Late Iron Age ............... 44
    2.3.1. The problem with recognising the boats in burials ......................... 44
    2.3.2. Valsgärde ............................................................................. 45
    2.3.3. Vendel, Uppland ..................................................................... 46
    2.3.4. Tuna in Alsike Parish, Uppland ................................................. 47
    2.3.5. Ensta, Uppland ........................................................................ 48
    2.3.6. Ultuna, Bondkyrka Parish, Uppland ............................................ 48
    2.3.7. Prästgården, Gamla Uppsala Parish, Uppland ................................. 49
    2.3.8. Birka, Uppland ....................................................................... 50
    2.3.9. Flosta, Altuna Parish, Uppland .................................................... 50
    2.3.10. Smedby, Hammarby Parish, Uppland ......................................... 50
    2.3.11. Fittja, Botkyrka Parish, Södermanland ...................................... 51
    2.3.12. Turinge, Södermanland ............................................................ 51
    2.3.13. Norsa, Västmanland ................................................................. 51
    2.3.14. Tuna, Badelunda Parish in Västmanland ..................................... 51
  2.4. Reused boat parts ..................................................................... 52
  2.5. Boat rivets and other rivets ....................................................... 53

3. BOAT TYPES AND FUNCTION ................................................... 57
  3.1. An interpretation of the function and use of Late Iron Age boats and ships .......................... 57
  3.2. Fishing and fishing boats ................................................................ 57
    3.2.1. Fish species and fishing boats .................................................... 57
    3.2.2. Fishing as a structuring principle for settlements in society ............. 58
    3.2.3. Boats for fishing from a comparative ethnoarchaeological perspective .. 59
  3.3. Boats for seal hunting ................................................................ 60
  3.4. Boats for bird hunting ............................................................... 60
3.5. Aristocratic boats for personal transports ........................................ 60
3.6. Trade and the merchant ships ........................................ 61
  3.6.1. Trade and trade routes ........................................ 61
  3.6.2. How to identify the remains of ships for transports and trading voyages .... 61
  3.6.3. Finds of cargo ships ........................................ 63
  3.6.4. Traditional boats for local transport along the Uppland coast ......................... 65
  3.6.5. Transport boats for the eastern journeys? ........................................ 65
  3.6.6. Boat finds related to the transport of ore ........................................ 66
  3.6.7. The names of cargo ships ........................................ 66
3.7. Maritime warfare and ships for war ........................................ 70
  3.7.1. Written sources for warships ........................................ 71
  3.7.2. The warship in archaeological material ........................................ 71
  3.7.4. The names of warships ........................................ 75
  3.7.5. The warship from the 13th century ........................................ 77
3.8. The main constructional differences between warships and cargo ships ca AD 800-1200 ........................................ 78
4. SHIPBUILDING IN A LONG-TERM PERSPECTIVE ........................................ 80
  4.1. The connection between Iron Age shipbuilding technology and the success of Viking expeditions ........................................ 80
  4.2. The roots of the Scandinavian ship-type ........................................ 80
    4.2.1. Clinker-built boats ........................................ 80
    4.2.2. Logboat building technology ........................................ 81
    4.2.3. Shell building ........................................ 82
    4.2.4. The first riveted ships ........................................ 83
    4.2.5. The emergence of the Scandinavian Iron Age type of logboat ........................................ 84
    4.2.6. The emergence of rowed ships ........................................ 85
4.3. Late Iron Age: The revolution in boat-building technology ........................................ 85
    4.3.1. The introduction of radial splitting technology ........................................ 85
    4.3.2. From tied to nailed ribs ........................................ 87
    4.3.3. Economic boat building ........................................ 87
    4.3.4. The results of a boat-building method and relation to societal change .......... 88
    4.3.5. Shipbuilding methods and the use of naust ........................................ 91
    4.3.6. A modern-day boat builder’s reflection on prehistoric and medieval shipbuilding, as it is visible in the Viks boat find ........................................ 91
4.4. Shipbuilding in the Late Iron Age ........................................ 99
    4.4.1. Material supply ........................................ 99
    4.4.2. The boat-building site ........................................ 100
    4.4.3. Tools and implements connected with shipbuilding ........................................ 101
    4.4.4. Traces of tools and implements used in the shipbuilding process ........................................ 102
    4.4.5. The Mästermyr find: a boat builder’s complete tool chest? ........................................ 108
    4.4.6. Social aspects of boat building and handicrafts in the Late Iron Age ........................................ 110
    4.4.7. The tools and methods of a maritime society ........................................ 110
4.5. The medieval changes in technology and society ........................................ 110
    4.5.1. From radial splitting to sawing ........................................ 111
    4.5.2. From shell building to skeleton building ........................................ 111
    4.5.3. From clinker to carvel ........................................ 111
    4.5.4. Reflections of the ideological change in shipbuilding ........................................ 112
5. ETHNICITY AND SHIPS ........................................ 113
    5.1. The main ship types in NW Europe AD 800–1200 ........................................ 114
      5.1.1. The Nordic/Baltic Sea tradition ........................................ 114
      5.1.2. The cog tradition ........................................ 114
      5.1.3. The hulc tradition ........................................ 115
      5.1.4. The pram tradition ........................................ 116
      5.1.5. The Celtic tradition ........................................ 116
      5.1.6. English/Anglo-Saxon tradition ........................................ 117
    5.2. Shipbuilding traditions in the Baltic Sea region ........................................ 117
    5.3. Boats built with rivets and nails ........................................ 117
      5.3.1. The ‘Baltic Sea boat type’ ........................................ 118
      5.3.2. The south Scandinavian boat type ........................................ 119
    5.4. Boats built with the sewing technique ........................................ 120
      5.4.1. History ........................................ 120
      5.4.2. The sewn boats of the Sámi ........................................ 121
      5.4.3. The sewn boats of central Finland ........................................ 125
      5.4.4. Sewn boats of Karelia ........................................ 125
      5.4.5. Russian-Estonian tradition ........................................ 126
    5.5. Boats with treenails ........................................ 126
    5.6. Iron cramps in the east and west ........................................ 130
    5.7. Political history and boat-building traditions ........................................ 132
      5.7.1. Eastern influences in the north ........................................ 133
      5.7.2. Boats and Baltic contacts ........................................ 135
6. THE SIGNIFICANCE OF WATER COMMUNICATION IN THE LATE IRON AGE

6.1. Journeys on land and water

6.1.1. The choice of means of communication

6.1.2. The conditions for travelling on land

6.1.3. Winter roads

6.2. Travelling on water

6.2.1. Ships and possibilities for river communication

6.2.2. Ships and harbours

6.2.3. The inland water-communication systems: ranking the rivers

6.2.4. Remains of a communication system in place names

6.3. Water communication and the location of some important central places

6.3.1. Helgö

6.3.2. Birka

6.3.3. Old Uppsala and Samnan

6.3.4. Mora sten

6.3.5. Folklandstingstad

6.3.6. Other central places on islands and by water routes

6.4. The social and political system as shaped by the river routes

6.5. The threat of enemies arriving by boat

6.6. Travelling in a roadless land

6.6.1. Sámi water-communication system

6.6.2. Travelling to church among the inhabitants of Enviken, Dalarna

6.6.4. On land and water to Arjeplog’s church

6.6.5. The main communication route in the 17th century from the port at Luleå to the silver mines above Kvikkjokk

6.7. With ships over land and water in ON material

6.8. The maritime landscape and how it disappeared

6.8.1. The Långhundra River: the life and death of a water route

6.9. To summarise: why a journey on a water route?

7. THE JOURNEYS ABROAD

7.1. Seafaring, ships and society

7.2. SHIPBUILDING AND SEAFARING POSSIBILITIES

7.2.1. Experience and history

7.2.2. Scandinavian strongholds: naval bases for light-built ships

7.2.3. Ships and river journeys

7.3. Problems and possibilities related to the journeys across the Baltic Sea

7.3.1. Small boats on a big sea? The boats used to cross the Baltic Sea

7.3.2. The sailing capabilities of the boats and ships used

7.3.3. Environmental conditions

7.3.4. Sailing or rowing?

7.4. Relation between navigational methods and seafaring

7.4.1. Navigation on the Baltic Sea in the Late Iron Age

7.4.2. Influences from Arabic astronomical navigation

7.5. Life on board on the journeys

7.5.1. Food

7.5.2. Overnight on journeys

7.6. The destinations of the journeys of the Svear according to runic inscriptions

7.6.1. The maritime context of an ‘abroad stone’

7.6.2. ‘han austarla arpi barpi…’: the social aspects of a journey abroad

7.7. Times and distances

7.7.1. Historical sources

7.8. Sailing routes across the Baltic Sea

7.8.1. The coastal sailing route to the east

7.8.2. Ships and sailing routes

7.9. MARITIME TRACES OF THE SVEAR ALONG THE EASTERN ROUTES

7.9.1. Poland and the west Slavonic area

7.9.2. Scandinavian boat remains in the southeast Baltic

7.9.3. Journeys to the south and east Baltic in ON sources, inscriptions and chronicles

7.10. THE WATER ROUTES TO ASIA, THE CALIPHATE AND THE ORIENT
7.10.1. The history of journeys to the East .......................................................... 195
7.10.2. Trade routes and political history .............................................................. 196
7.10.3. Seafaring and the development of trade ...................................................... 197
7.10.4. How to trace the remains of Swedish seafaring in the East ....................... 197
7.10.5. The Neva River, Lake Ladoga, and the Volkhov River to Staraja Ladoga .......... 199
7.10.6. The water route from Lake Ladoga to the lakes Onega and Beloozero ........... 202
7.10.7. From the lakes Onega and Beloozero to the Northern Dvina, Onega River and the fur-supplying areas of the north .................................................. 202
7.10.8. From Beloozero south to the Volga and to the Northern Dvina ...................... 205
7.10.9. Maritime traces of journeys by Svear along the Volga River and tributaries ....... 205
7.10.10. With ships to the Caspian Sea ................................................................. 206
7.10.11. The problem of the maritime journeys to Särkland .................................. 211
7.10.12. The journey of Ingvar the Far-traveller .................................................... 212
7.11. THE ESTABLISHMENT OF THE ROUTE FROM THE VARANGIANS TO THE GREEKS ............................................................... 219
7.11.1. The beginning: Novgorod/Gorodische by Lake Ilmen ............................... 219
7.11.2. Remains of Scandinavian ships and seafaring from the journey to the Black Sea and Constantinople ................................................................. 221
7.13. THE PROBLEM OF PORTAGES ...... 225
7.13.1. An introduction to the problem ................................................................. 225
7.13.2. The discussion ......................................................................................... 225
7.13.3. The premises for the experiments .............................................................. 226
7.13.4. An ethnographic approach to the problem of portages .............................. 226
7.13.5. Some information about the construction of portages from the historical material ................................................................. 228
7.13.7. The ships used for portaging ................................................................. 232
7.13.8. Special technological adoptions to the boats for portages ........................ 233
7.13.9. Results of portaging as experimental archaeology: ship replicas on a reconstructed portage of the type with lunar ......................................... 233
7.13.10. A solution to the problem of portages? ................................................... 236

With their own ships? ........................................... 237
7.14.2. Ships all the way? .................................................. 237

8. THE SHIP AS A SYMBOL ........................................ 239
8.1. Boats and ships found in bogs and lakes ........................................................ 240
8.1.1. Traces of ship parts in early sacrificial sites in the Lake Mälaren Basin ......................... 241
8.1.2. The investigation of the sacrificial site at Lake Hederviken, Närtunaby, Närtuna Parish, Uppland ......................................................... 247
8.1.3. The context of the ship sacrifices: an interpretation ....................................... 250
8.1.4. Ship sacrifices in other areas of Sweden ..................................................... 254
8.1.5. Sacrifices on the sea journeys ................................................................. 255
8.1.6. Regional differences in Scandinavia? ......................................................... 255
8.1.7. A hierarchical ranking of ritual sites ......................................................... 256
8.1.8. The relation between ships and sacred water ............................................. 256
8.2. The ship symbol in depictions ................................................................. 257
8.2.1. Ships on picture stones ................................................................. 257
8.2.2. Ships on coins ................................................................. 261
8.2.3. Ships on textiles ................................................................. 262
8.2.4. Ship graffiti ................................................................. 265
8.3. THE BOAT IN THE GRAVE ........................................................................ 265
8.3.1. The boat-burial custom ................................................................. 265
8.3.2. The boat-burial ritual in written sources ..................................................... 267
8.3.3. The problem with the orientation of boats in burials .................................. 268
8.3.4. Ship construction: How to determine prow and stern in a boat burial .......... 269
8.3.5. An analyse of the orientation of the boats in some of the burials ................. 273
8.3.6. Other indications of the orientation of the ships in the burials ....................... 275
8.3.5. An attempt to trace the factors behind the orientation of the boat ................. 277
8.4. Remains of a value system ........................................................................ 278
8.4.1. The evaluation of space within the boat ..................................................... 278
8.3.6. The spatial distribution within the ship in the burial .................................. 284
8.5. The ship as an idea in structuring space ....................................................... 287
8.5.1. The house as a ship ........................................................................ 287
8.5.2. The churches as ships ................................................................. 288
8.5.3. A reliquary as a ship-shaped house ........................................................... 288
8.6. From a means of communication to a symbol and an icon ........................... 288
11.1.3. Aspects on gender, ships, and the use of space in the ship based on the boat burials at Tuna in Alsike
11.1.4. Gender and boat type in Alsike and Badelunda
11.1.5. Chronological and geographical differences from a gender perspective
11.1.6. Gender aspects on the maritime journeys

12. THE MARITIME SOCIETY
The maritime organisation that shaped the society
Leiðangr: the maritime structuring principle
Continuity and change

The ships of a maritime society
The boats and ships of the Svear
Seafaring and cultural contacts
The ship as an idea
Power, ideology and religion
The boat burial: a central public ritual in the Freya cult?
Religion and ideology within the central Swedish royal dynasty in the Early Middle Ages
People in the past and in the present
Aun
