5 Production of Portland cement (This chapter was written in collaboration with J.-C. Weiss) 90
5.1 Historical background of Portland cement production 90
5.2 Manufacturing processes 106
5.3 Selection and preparation of the raw materials 112
5.4 The fuels 116
5.5 Schematic representation of a cement kiln 117
5.5.1 Kiln with a pre-heater 117
5.5.2 Two-pier short kiln equipped with a precalciner 119
5.5.3 Long kiln with three piers equipped with a precalciner 121
5.6 Circulation of volatiles 121
5.6.1 Chlorine cycle 122
5.6.2 Sulphur and alkali cycles 123
5.7 Microscopical examination of some industrial clinkers 124
5.7.1 Examination of Figure 5.26 124
5.7.2 Examination of Figure 5.27 124
References 124

5.8 Clinker 125
5.9 The equipment 125
5.10 Final 128
5.11 Qual. 132
5.12 Conclusion 134
5.13 Does 137
5.14 The equipment. 139
5.15 Mini 142
5.16 Conclusion 143

6 Portland cement clinker 144
6.1 Introduction 144
6.2 The sphen 146
6.3 How 148
6.4 Portland cement clinker 150
6.4.1 Conclusion 150
6.4.2 150
6.4.3 152
6.5 Direct 154
6.6 Indirect temperatures 156
6.6.1 156
6.6.2 158
6.6.3 160
6.6.4 162
6.7 Portland cement 164
6.7.1 164
5.7.3 Examination of Figure 5.28 124
5.7.4 Examination of Figure 5.29 125
5.7.5 Examination of Figure 5.30 125
5.7.6 Examination of Figure 5.31 126
5.7.7 Examination of Figure 5.32 127
5.8 Clinker storage 128
5.9 The addition of calcium sulphate 129
5.10 Final grinding 133
5.11 Quality control 135
  5.11.1 Chemical analysis 135
  5.11.2 Physical properties 136
  5.11.3 Mechanical properties 137
5.12 Conditioning and shipping 138
5.13 Evolution of the characteristics of Portland cement 140
5.14 The ecological impact of Portland cement manufacturing 142
5.15 Does an ideal Portland cement exist? 143
5.16 Conclusion 144

6 Portland cement hydration
  6.1 Introduction 146
  6.2 The scientific complexity of a simple technological phenomenon 148
  6.3 How to approach the hydration reaction 151
  6.4 Portland cement and gypsum 153
    6.4.1 Controlling the hydration of C₃A 153
    6.4.2 The true nature of the calcium sulphate found in Portland cement 156
    6.4.3 The SO₃ content of clinker 159
  6.5 Direct observation of the structural modifications occurring during cement hydration 161
  6.6 Indirect observations of the physico-chemical and thermodynamic changes occurring during Portland cement hydration 166
    6.6.1 Variation of the electrical conductivity 167
    6.6.2 Portland cement setting 168
    6.6.3 Development of the heat of hydration 168
    6.6.4 Volumetric variations associated with hydration reaction 172
      6.6.4.1 Le Chatelier’s observations 173
      6.6.4.2 Autogenous shrinkage 174
  6.7 Portland cement hydration 176
    6.7.1 Some experimental data on hydration reaction 176
xii  Contents

6.7.2  Jensen’s and Hansen’s graphical representation of hydration reaction 177
  6.7.2.1  Case of cement paste having a water/binder ratio equal to 0.60 181
  6.7.2.2  Case of cement paste having a water/binder ratio equal to 0.42 182
  6.7.2.3  Case of cement paste having a water/binder ratio equal to 0.30 182
  6.7.2.4  Case of cement paste having a water/binder ratio equal to 0.60 that is hydrating in the presence of an external source of water 182
  6.7.2.5  Case of cement paste having a water/binder ratio of 0.42 that is hydrating in the presence of an external source of water 183
  6.7.2.6  Case of cement paste having a water/binder ratio of 0.30 that is hydrating in the presence of an external source of water 183
  6.7.3  Amount of external water necessary to avoid self-desiccation of the cement paste (using Power’s definition of self-desiccation) 184
  6.7.4  Volumetric changes during the hardening of concrete 186
  6.7.5  Influence of the temperature in the kinetics of hydration reaction 187

6.8  Sequential description of hydration reaction 188
  6.8.1  First stage: mixing period 189
  6.8.2  Second stage: dormant period 189
  6.8.3  Third stage: setting and acceleration of hydration 190
  6.8.4  Fourth stage: hardening 192
  6.8.5  Fifth stage: slow-down period 193
  6.8.6  Schematic representation of a hydrated cement paste at twenty-eight days 193

6.9  Linking hydration and mechanical strength 194

6.10  Structural models of C-S-H 195

6.11  The origin of the cohesive forces 198

6.12  Modelling hydration reaction 200

6.13  Conclusion 200

7  Admixtures 206
  7.1  Historical background 207
  7.2  An artificially complicated terminology 209
7.3 Dispersing agents 213
7.3.1 The dispersion of cement particles 213
7.3.2 Lignosulphonates 218
7.3.3 Superplasticizers 221
7.3.3.1 Polynaphthalenes (PNS) 222
7.3.3.2 Hydration in the presence of polysulphonate 224
7.3.3.3 The crucial role of calcium sulphate 228
7.3.3.4 The compatibility between polysulphonate and cement 229
7.3.3.5 The limits of the testing of the rheology of cement paste 231
7.3.3.6 Some typical cases 234
7.3.3.7 Selection of a superplasticizer 240
7.3.3.8 Superplasticizer dosage 248
7.3.3.9 Practical advice 249
7.4 Admixtures that modify hydration kinetics 251
7.4.1 Accelerators 251
7.4.2 Set accelerators 253
7.4.3 Retarders 254
7.4.4 Cocktails of dispersing agent: accelerator or dispersing-agent retarder 256
7.5 Admixtures that react with one of the by-products of hydration reaction 257
7.6 Air-entraining agents 258
7.7 Other types of admixtures 260
7.7.1 Colloidal agents 260
7.7.2 Water-repellent admixtures 261
7.7.3 Shrinkage-reducing admixtures 261
7.7.4 Anti-freeze admixtures 262
7.7.5 Latexes 262
7.7.6 Foaming agents 263
7.7.7 Corrosion inhibitors 263
7.8 Conclusion 264
8 Cementitious materials other than Portland cement: supplementary cementitious materials, mineral components Portland cement additions 273
8.1 Terminology 273
8.2 Blast furnace slag 276
8.2.1 Fabrication process 276
8.2.2 Slag hydration 282
8.2.3 Effect of slag on the main characteristics of concrete 283
8.3 Pozzolans 285
  8.3.1 Fly ashes 287
  8.3.2 Silica fume 293
  8.3.3 Calcined clays and shales 299
  8.3.4 Rice husk ash 299
  8.3.5 Natural pozzolans 300
  8.3.6 Diatomaceous earth 303
  8.3.7 Perlite 304
8.4 Fillers 305
8.5 Producing blended cement by adding cementitious materials directly in the concrete mixer? 306
8.6 Effects of cementitious materials on the principal characteristics of concrete 307
8.7 Blended cements 309
8.8 Conclusion 310
