

Zero Waste Engineering

M.M. Khan and M.R. Islam

**Dalhousie University
Alberta, Canada**

Contents

Preface	xiii
1 Introduction	1
1.1 Background	1
1.2 The Deficiency of Current Engineering Practices	4
1.3 The Zero Waste Approach	5
1.4 Scope of the Book	6
1.5 Organization of the Book	6
2 A Delinearized History of Time and Its Impact on Scientific Cognition	11
2.1 Introduction	11
2.2 The Importance of the Continuous Long-term History	13
2.3 Delinearized History of Time and Knowledge	17
2.3.1 A Discussion	28
2.4 A Reflection on the Purposes of Sciences	32
2.5 About the “New Science” of Time and Motion	33
2.5.1 Time-Conceptions, the Tangible-Intangible Nexus, and the Social Role of Knowledge	34
2.5.2 More about Time: Newtonian “Laws of Motion”—Versus Nature’s	36
2.5.3 Science and the Problem of Linearized Time	42
2.5.4 Reproducibility and the Extinction of Time	44
2.5.5 The Long Term as an Infinite Summation of “Short Terms” $T = \sum_{i=1}^{\infty} f_i(t)$	46

2.5.6	Erasing History in Order to "Disappear" the Long-term and Enshrine the Steady State	50
2.5.7	First Interim "Time"-Ly Conclusion: The Anti-Nature Essence of Linearized Time	52
2.5.8	Second Interim "Time"-Ly Conclusion: Making Time Stand Still by Way of Linearized Visualization of Space	53
2.6	What is New Versus what is Permitted: Science and the Establishment?	55
2.6.1	"Laws" of Motion, Natural "Law" & Questions of Mutability	55
2.6.2	Scientific Disinformation	62
2.7	The Nature-Science Approach	66
2.7.1	The Origin-pathway Approach of Nature-Science Versus the Input-output Approach of Engineering	66
2.7.2	Reference Frame and Dimensionality	67
2.7.3	Can "Lumped Parameters" Address Phenomena of Only Partial Tangibility?	69
2.7.4	Standardizing Criteria and the Intangible Aspects of Tangible Phenomena	69
2.7.5	Consequences of Nature-Science for Classical Set Theory and Conventional Notions of Mensuration	71
2.8	Conclusions	73
3	Towards Modeling of Zero Waste Engineering Processes with Inherent Sustainability	77
3.1	Introduction	77
3.2	Development of a Sustainable Model	79
3.2.1	Problem with the Current Model	80
3.2.2	Violation of Characteristic Time	85
3.3	Observation of Nature: Importance of Intangibles	86
3.4	Analogy of Physical Phenomena	90
3.5	Intangible Cause to Tangible Consequence	91

3.6	Removable Discontinuities: Phases and Renewability of Materials	93
3.7	Rebalancing Mass and Energy	94
3.8	ENERGY: Existing Model	96
3.8.1	Supplements of Mass Balance Equation	96
3.9	Conclusions	99
4	The Formulation of a Comprehensive Mass and Energy Balance Equation	101
4.1	Introduction	101
4.2	The Law of Conservation of Mass and Energy	106
4.3	Avalanche Theory	107
4.4	Aims of Modeling Natural Phenomena	112
4.5	Simultaneous Characterization of Matter and Energy	114
4.6	A Discussion	117
4.7	Conclusions	121
5	Colony Collapse Disorder (CCD): The Case for a Science of Intangibles and Zero Waste Engineering	123
5.1	Introduction	123
5.2	The Need for the Science of Intangibles	125
5.3	The Need for Multidimensional Study	133
5.4	Assessing the Overall Performance of a Process	136
5.5	Facts about Honey and the Science of Intangibles	146
5.6	The Law of Conservation of Mass and Energy	154
5.7	CCD In Relation to Science of Tangibles	160
5.8	Possible Causes of CCD	167
5.8.1	Genetically Engineered Crops	167
5.8.2	“Foreign Elements”	169
5.8.3	Electromagnetic Irradiation	171
5.8.4	Israeli Acute Paralysis Virus (IAPV)	173
5.9	Nature Science Approach and Discussion	173

5.10	A New Approach to Product Characterization	176
5.11	A Discussion	179
5.12	Conclusions	182
6	Zero Waste Lifestyle with Inherently Sustainable Technologies	185
6.1	Introduction	185
6.2	Energy from Kitchen Waste and Sewage	189
6.2.1	Estimation of the Biogas and Ammonia Production	191
6.3	Utilization of Produced Waste in a Desalination Plant	192
6.4	Solar Aquatic Process to Purify Desalinated/Waste Water	199
6.4.1	Process Description	199
6.4.2	Utilization of Biogas in Fuel Cell	203
6.5	Direct Use of Solar Energy	205
6.5.1	Space Heating	207
6.5.2	Water Heating	208
6.5.3	Refrigeration and Air Cooling	209
6.5.4	Solar Stirling Engine	210
6.6	Sustainability Analysis	211
6.6	Conclusions	215
7	A Novel Sustainable Combined Heating/Cooling/Refrigeration System	217
7.1	Introduction	217
7.2	Einstein Refrigeration Cycle	220
7.3	Thermodynamic Model and the Energy Requirement of the Cycle	221
7.4	Solar Cooler and Heat Engine	226
7.5	Actual Coefficient of Performance (COP) Calculation	226
7.5.1	Vapor Compression Cycle Refrigeration System	228
7.6	Absorption Refrigeration System	230
7.7	Calculation of Global Efficiency	232
7.7.1	Heat Transfer Efficiency	233
7.7.2	Turbine Efficiency	233

7.7.3	Generator Efficiency	234
7.7.4	Transmission Efficiency	234
7.7.5	Compressor Efficiency	234
7.7.6	Global Efficiency	235
7.7.7	Fossil Fuel Combustion Efficiency	236
7.7.8	Solar Energy	237
7.7.9	Transmission Efficiency	237
7.8	Solar Energy Utilization in the Refrigeration Cycle	239
7.9	The New System	240
7.10	Pathway Analysis	241
7.10.1	Environmental Pollution Observation	242
7.10.2	Fuel Collection Stage	243
7.10.3	Combustion Stage	243
7.10.4	Transmission Stage	244
7.10.5	Environmentally Friendly System	245
7.10.6	Global Economics of the Systems	245
7.10.7	Quality of Energy	246
7.11	Sustainability Analysis	246
7.12	Conclusions	249
8	A Zero Waste Design for Direct Usage of Solar Energy	251
8.1	Introduction	251
8.2	The Prototype	255
8.2.1	The Infrastructure	255
8.2.2	Fluid Flow Process	259
8.2.3	Solar Tracking Process	260
8.3	Results and Discussion of Parabolic Solar Technology	260
8.4	Conclusions	268
9	Investigation of Vegetable Oil as the Thermal Fluid in a Parabolic Solar Collector	269
9.1	Introduction	269
9.2	Experimental Setup and Procedures	273
9.2.1	Parabolic Solar Collector Assembly	273
9.2.2	Solar Pump and PV Solar Panel	275
9.2.3	Solar Heat Transfer Fluid (Thermal Fluid)	277
9.3.2	Experimental Procedure	277

9.4	Results and Discussion	278
9.5	Conclusions	281
10	The Potential of Biogas in the Zero Waste Mode in the Cold-Climate Environment	283
10.1	Introduction	283
10.2	Background	284
10.3	Biogas Fermentation	285
10.4	Factors Involved in Anaerobic Digestion	288
10.5	Health and Environmental Issue	291
10.6	Digester in Cold Countries	293
10.7	Experimental Setup and Procedures	294
	10.7.1 Experimental Apparatus	294
	10.7.2 Experimental Procedure	296
10.8	Discussion	298
10.9	Conclusions	303
11	The New Synthesis: Application of All Natural Materials for Engineering Applications	305
11.1	Introduction	305
11.2	Metal Waste Removal with Natural Materials	306
	11.2.1 Natural Adsorbent	306
11.3	Natural Materials as Bonding Agents	312
	11.3.1 Toxic and Hazardous Properties of Adhesives	314
	11.3.2 Sustainable Technology for Adhesive Preparation	318
	11.3.3 Materials and Methods	320
	11.3.4 Formulation of Adhesives	322
	11.3.5 Testing Media	323
	11.3.6 Testing Method and Standards	324
	11.3.7 Results and Discussion	325
11.4	Selection of Adhesives	328
	11.4.2 Application of the Adhesives	331
11.5	Conclusions	338
12	Sustainability of Nuclear Energy	341
12.1	Summary	341
12.2	Introduction	342

12.3	Energy Demand in Emerging Economies and Nuclear Power	344
12.4	Nuclear Energy Options	346
12.5	Status of Global Nuclear Energy Development	347
12.6	Nuclear Research Reactors	351
12.7	Global Estimated Uranium Resources	352
12.8	Nuclear Reactor Technologies	353
12.9	Sustainability of Nuclear Energy	354
12.9.1	Environmental Sustainability of Nuclear Energy	355
12.9.2	Cooling Water Discharge	357
12.9.3	Nuclear Radiation Hazard	357
12.9.4	Nuclear Wastes	357
12.9.5	Social Sustainability of Nuclear Energy	360
12.9.6	Economic Sustainability of Nuclear Energy	363
12.10	Nuclear Energy and Global Warming	366
12.11	Global Efficiency of Nuclear Energy	368
12.12	Energy from Nuclear Fusion	369
12.13	Some Considerations	370
12.14	Conclusions	372
13	High Temperature Reactors for Hydrogen Production	375
13.1	Summary	375
13.2	Introduction	376
13.3	IS Process	378
13.4	Solar Energy for High Temperature Reactor	380
13.5	Sustainability of the Process	383
13.6	Conclusions	385
14	Economic Assessment of Zero Waste Engineering	387
14.1	Introduction	387
14.2	Delinearized history of Modern Age	388
14.3	Insufficiency of Conventional Economics Models	398
14.4	The New Synthesis	401
14.5	The New Investment Model, Conforming to the Information Age	403
14.6	Economics of Zero Waste Engineering Projects	409
14.6.1	Biogas Plant	411
14.6.2	Solar Parabolic Trough	414

xii CONTENTS

14.6.3	A New Approach to Energy Characterization	416
14.6.4	Global Economics	419
14.6.5	Environmental and Ecological Impact	420
14.6.4	Quality of Energy	420
14.6.5	Evaluation of Process	421
14.7	Conclusions	423
15	Conclusions and Recommendations	425
15.1	Conclusions	425
	References	429
	Index	459
