VOLUME 2
# Computational Modelling of Concrete Structures

**Plenary lectures**

- Comminution of concrete due to kinetic energy of high shear strain rate  
  ZP. Bazant & F.C. Caner  
  Page 3

- Modeling failure of brittle materials with eigenerosion  
  A. Pandolfi, B. Li & M. Ortiz  
  Page 9

- Multiscale computational models for the simulation of concrete materials and structures  
  G. Cusatis, R. Rezakhani, M. Alnaggar, X. Zhou & D. Pelessone  
  Page 23

- Multiscale (FE*) analysis of material failure in cement-aggregate-type composite structures  
  J. Oliver, M. Calcedo, E. Bouhin, J.A. Hernández & A. Huespe  
  Page 39

- The aim of computational methods for managing concrete structures in nuclear power plants  
  Page 51

- Poro-chemo-fracture-mechanics bottom-up: Application to risk of fracture design of oil and gas cement sheath at early ages  
  F.-J. Ulm, M. Abuhaikal, T. Petersen & R.J.-M. Pellenq  
  Page 61

**Constitutive and multiscale modelling of concrete**

- Hierarchical multiscale models for localization phenomena within the framework of FE-X  
  J.F. Viger  
  Page 75

- Modelling of Alkali-Silica Reaction in concrete: A multiscale approach for structural analysis  
  R. Esposito & M.A.V. Hendricks  
  Page 87

- A novel strain-rate model for concrete and its influence on wave propagation due to impact  
  U. Häussler-Combe  
  Page 97

- Implication of pore structure on micro-mechanical behaviour of virtual cementitious materials  
  N.L.B. Le, L.J. Shui, M. Stroeven & P. Stroeven  
  Page 109

- A constitutive model for concrete based on continuum theory with non-local softening coupled with eXtended Finite Element Method  
  J. Bobiński & J. Tejchman  
  Page 117

- An elasto-plastic constitutive model with non-local softening and viscosity to describe dynamic concrete behaviour  
  I. Marzec & J. Tejchman  
  Page 127

- Modelling cement at fundamental scales: From atoms to engineering strength and durability  
  E. Masoero, H.M. Jennings, F.-J. Ulm, E.D. Gado, H. Manzano, R.J.-M. Pellenq & S. Yip  
  Page 139

- Two-scale model for concrete beams subjected to three point bending—numerical analyses and experiments  
  L. Skarżyński, M. Nitka & J. Tejchman  
  Page 149
A multiscale model for predicting the elasticity modulus and the strength of Ultra-High Performance Fiber Reinforced Concrete
J.L. Zhang, X. Liu, Y. Yuan & H.A. Mang

Is cement a glassy material?
M. Bauchy, M.J.A. Qomi, R.J.-M. Pelleneq & F.-J. Ulm

Multi-scale model of a single crack bridge in composites combining rigid brittle matrix with heterogeneous fibrous reinforcement
M. Vořechovský, R. Rypl & R. Chudoba

Modeling concrete under high frequency loading using a multi-scale method
A. Karamnejad, L.J. Sluys & V.P. Nguyen

Mesoscopic modeling of triaxial behavior of concrete
Y. Malecot, L. Zingg, E. Piatrowska, M. Briffaut & L. Daudeville

Application of a nonlocal damage law to model concrete fracture
E. Lorentz & K. Kaczmeryenko

An approach to modelling smoothed crack closure and aggregate interlock in the finite element analysis of concrete structures
A.D. Jefferson, I.C. Mihai & P. Lyons

Modelling of fracture in three dimensional brittle bodies
L. Kaczmarczyk & C. Pearce

Consideration of fibre orientation in a micromechanical model for strain hardening cement composite
I. Viejo, M. Laspalas, I. Mariner & M.A. Jiménez

Constitutive modelling of fibre reinforced cementitious composites based on micromechanics
I.C. Mihai, A.D. Jefferson & P. Lyons

Non-local model and global-local cracking analysis for the study of size effect
C. Giry, C. Oliver-Leblond, F. Ragueneau & E. Kishta

Numerical analysis of Recycled Aggregate Concrete mechanical behavior
P. Folino

On finite element modeling of compressive failure in brittle materials
J. Červenka, V. Cervenka & S. Laserna

Influence of the macro-porosity and the meso-structure on the dynamic properties of concrete
F. Gatuingt & S. Pierre

A volumetric upgrade of scalar gradient damage model
J. Pamin, A. Wosatko & R. Desmorat

Nano-scale characterization of elastic properties of AFt and AFm phases of hydrated cement paste
S. Hajiīlar & B. Shafei

ITZ-induced crack initiation in concrete: Micromechanics-based sensitivity analyses regarding concrete phase properties
M. Königsberger, B. Pichler & C. Hellmich

Experimental and numerical investigation of the mechanical behavior of interfaces between cementitious materials
T. Cordes & G. Hofstetter

A continuum micromechanics-LEFM model for fiber reinforced concrete
J.J. Timothy & G. Meschke
### Advanced modelling strategies and paradigms

Time dependent and multiphysics problems

Reorientation of fibres during the flow of fibre-reinforced self-compacting concrete
and determination of fibre orientation factor
S. Kulasegaram, R. Deeb & B.L. Karihaloo

Fire resistance analysis of RC elements with restrained thermal elongation in a natural fire
A. Sadaoui, A. Khennane & M. Fafard

Accounting for the fibre orientation on the structural performance of flowable fibre
reinforced concrete
E.V. Sarmiento, M.A.N. Hendriks & T. Kanstad

Analysis of the thermo-chemo-mechanical behavior of massive concrete structures
at early-age
T. Honorio, B. Bary & F. Benboudjema

Modeling the rapid chloride migration test for concrete using the lattice model
and characteristic Galerkin approach
B. Šavija, M. Luković & E. Schlangen

Diffusion-reaction model for ASR: Formulation and 1D numerical implementation
J. Liudat, C.M. López & I. Carol

A coupled carbonation-rust formation-mechanical damage model for steel corrosion
in reinforced concrete
T.T.H. Nguyen, B. Bary, T. DeLarrard & V. L’Hostis

Drying cracking pattern analysis using a simple two-stage drying model
and a discrete model
A. Delaplace & H. Noyalet

viii
Microscopic model for concrete diffusivity prediction
M. Bogdan, F. Benboudjema, J.-B. Colliat & L. Stefan

Model B4: Multi-decade creep and shrinkage prediction of traditional and modern concretes
R. Wendner, M.H. Hubler & Z.P. Bazant

Concrete behaviour under ballistic impacts: Effects of materials parameters on penetration resistance and modeling with PRM model
C. Pontiroli, B. Erzar & E. Buzaud

Modeling dynamic fracture of quasi-brittle materials: Rate sensitivity and impact
J. Ozbolt, B. Irhan, A. Sharma & D. Ruta

Modeling processes related to corrosion of steel reinforcement and damage in concrete
J. Ozbolt, F. Ortalić & G. Balabanić

Computational failure analysis of concrete under high temperature
G. Eise, M. Pipani & J.L. Mroginski

Thermal effects on early-age cracking potential of concrete bridge decks
J.E. Bolander, K. Kim & K. Sasaki

The influence of loading rate on the compressive strength of cementitious materials: Experiments and “separation of time scales”-based analysis
B. Pichler, I. Fischer, E. Lach, Ch. Terner, E. Barroso & F. Britz

A numerical model for the self-healing capacity of cementitious composites
G. Di Lucio, L. Ferrara & V. Krelani

Microprestress-solidification theory: Modeling of size effect on drying creep
Z.P. Bazant, P. Havlasek & M. Jirásek

A 2D hydro-mechanical lattice approach for modeling corrosion induced cracking of reinforced concrete
P. Grassl, C. Fahy, S. Wheeler & D. Gallipoli

Chemoplastic modelling of Alkali-Silica Reaction (ASR)
A. Winnicki, S. Serega & F. Norys

Three-dimensional network modelling of the influence of microstructure of concrete on water transport
I. Athanasiadis, S. Wheeler & P. Grassl

Modelling of chloride transport in non-saturated concrete
M. Fenaux, J.C. Gálvez, E. Reyes, A. Monagues & J. Bemul

Numerical analysis of multiple ion species diffusion and Alkali-Silica Reaction in concrete
M.N. Nguyen, J.J. Timothy & G. Meschke

Multi-scales computation of creep deformation of concrete at very early-age
M. Farah, F. Grondin, A. Loukili & M. Matallah

Performance of concrete structures
Compressive membrane action in confined RC and SFRC circular slabs
B. Belletti, F. Vitalli & J.C. Wulhaven

Influence of differential settlements on masonry structures
H. Nasser, M. Al Heib & O. Deck

Numerical study of a strain hardening cementitious composite overlay system for durable concrete repair
M. Luković, E. Schlangen, B. Šavija, G. Ye & K. van Breugel

Discussion on mechanical behavior of joints using post-installed anchors and concrete surface roughening for seismic retrofitting
Y. Takase, T. Abe, T. Ikeda, T. Wada, K. Katori & Y. Shinohara
Assessing the structural behavior of shear-critical prestressed concrete beams using Finite Element analysis and digital image correlation
K. De Wilder, G. De Roeck, L. Vandewalle, P. Lava, Y. Wang & D. Debruyne

Bending load capacity of strengthened RC beams with stochastically distributed material properties
J. Weselek & U. Häussler-Combe

Study of brittle failure modes of precast roof elements connected to the beams with steel dowels
B. Belletti, C. Damoni, M. Scolari & A. Stocchi

Non-linear analyses and cracking process of FRC tension ties
P. Bernardi, E. Micheli, A. Sirico, E. Minelli & G. Tiberti

Non-linear mechanical analysis of shield tunnel structure at ultimate loading
H. Zhang, X. Liu & Y. Yuan

Non-linear analysis of mechanical behaviors of shield tunnel segments reinforced by steel plate
M. Tang, X. Liu & Y. Yuan

Crack tracking on a shear critical reinforced concrete beam
A.T. Slobbe, M.A.N. Hendriks & J.G. Rots

Nonlinear FE analysis of a full scale in situ test on a RC bridge by means of a 1D layered frame model
D. Ferreira, J. Bairán & A. Mari

Determination of distribution width for shear stresses at support in reinforced concrete slab bridges
E.O.L. Lantsoght, A. de Boer & C. van der Veen

Numerical analysis for predicting the ultimate capacity of rectangular reinforced concrete stub columns
A.A. EI Fattah & H. Rasheed

Formulation for the adjustment of RC-section behaviour to experimental tests
A.T. López, A. Tomás & G. Sánchez-Olvera

Modeling viscous damping in nonlinear direct-integration and modal time-history analyses of base-isolated reinforced concrete buildings
D.R. Pani & A.C. Wijeyewickrema

Three-dimensional FE simulation of pullout test of corroded bar from RC specimen
M. German & J. Pamin

Nonlinear FEA guideline for modelling of concrete infrastructure objects
A. de Boer, M.A.N. Hendriks, J.A. den Uijl, B. Belletti & C. Damoni

Simplified method strategies based on damage mechanics for engineering issues
J. Mazara & S. Grange

Numerical investigation of the bearing capacity of transversely prestressed concrete deck slabs
S. Amir, C. van der Veen, J.C. Walraven & A. de Boer

Fatigue testing and numerical simulation of mono strand stay cable systems
J. Novaciæl, W. Traeger & J. Kollegger

Pressure-impulse diagrams for SFRC underground tunnels
M. Colomba, P. Martinelli & R. Huaping

Safety assessment of a bridge deck slab using NLFEA and a semi-probabilistic global resistance safety factor
M. Pimentel & J. Figueiras
FEM and Strut-and-Tie analysis of RC frame corners under opening bending moment
M. Szczecina & A. Winnicki

Pavement infrastructures footprint: The impact of pavement properties on vehicle fuel consumption
A. Louhghalam, M. Akbarian & F.-J. Ulm

Simulating bond-slip effects in high-performance fiber-reinforced cement based composites under cyclic loads
M.J. Bandelt & S.L. Billington

Simulation of large strains in concrete specimen—centric tensile tests using steel ropes as reinforcement
B. Tromoser, B. Eichwalder & J. Kollegger

Numerical simulation of shear behavior of reinforced concrete beams with and without flanges
P. Huber & J. Kollegger

Introduction of warping in a nonlinear multifiber beam model in torsion for reinforced concrete structures
S. Capdevielle, S. Grange, F. Dufour & C. Desprez
