Study on the Hydro-Mechanical Behavior of Fiber Reinforced Fine Grained Soils, with Application to the Preservation of Historical Monuments

Dissertation

as a requirement of the degree of
Doktor-Ingenieur (Dr.-Ing.)

at the Faculty of
Civil and Environmental Engineering
Ruhr-Universität Bochum

submitted by
Houman Soleimani Fard
from Isfahan, Iran

Reviewers
Prof. Dr.-Ing. habil. Tom Schanz
Prof. Dr.-Ing. Norbert Vogt
Prof. Dr.-Ing. Markus König

Bochum, March 2014

Abstract v

Zusammenfassung vii

1 Introduction 1
   1.1 Background and motivation ........................................ 1
   1.2 Scope and objectives ............................................... 3
   1.3 Organization of the dissertation .................................. 4

2 Problems of uprising moisture and possible treatments 5
   2.1 Introduction ......................................................... 5
   2.2 Brick preparation method and micro-structure of adobes .......... 6
      2.2.1 Clay-sand mixtures ............................................ 7
      2.2.2 Bonding, fabric and structure ................................ 8
      2.2.3 Application of soil mechanics ................................ 9
   2.3 Problems arising from uprising moisture .......................... 10
   2.4 Proposed countermeasure methods against uprising moisture ... 13
      2.4.1 Creating a physical or chemical barrier ....................... 13
      2.4.2 Creating a potential against the capillary potential .......... 14
      2.4.3 Changing the facades and pavements .......................... 14
      2.4.4 Concealing anomalies ........................................... 15
      2.4.5 Base ventilation ................................................ 15
   2.5 Approaches of this research ....................................... 16
   2.6 Summary .................................................................... 17
3 Literature review

3.1 Introduction ................................................. 19

3.2 Basics of unsaturated soils ............................... 19
  3.2.1 Total potential of soil water ...................... 20
  3.2.2 Concept of suction ................................. 20
    3.2.2.1 Matric suction ................................ 21
    3.2.2.2 Osmotic suction ............................... 21
  3.2.3 Suction measurement ............................... 21
    3.2.3.1 Direct measurements .......................... 22
    3.2.3.2 Indirect measurements ....................... 23

3.3 Soil-water characteristics curve (SWCC) ............. 25
  3.3.1 Hysteretic behavior ................................ 27

3.4 Effective stress in unsaturated soils .................. 29
  3.4.1 Effective stress approach ......................... 29
  3.4.2 Two independent stress variables approach .... 29

3.5 Shear strength of unsaturated soil .................... 30
  3.5.1 Effective stress approach ......................... 30
  3.5.2 Independent state variables approach ........... 30
  3.5.3 Laboratory measurement of shear parameter for unsaturated soil ............. 31

3.6 Plane strain state ........................................ 33
  3.6.1 Plane strain concept in geotechnical engineering .... 34
  3.6.2 Developed laboratory devices used for plane strain state ................. 37
    3.6.2.1 Devices for saturated and dry conditions ........ 37
    3.6.2.2 Devices for unsaturated conditions ............ 42
  3.6.3 Results of plane strain conditions ............... 43
    3.6.3.1 Shear strength ................................ 44
    3.6.3.2 Failure type and shear band inclination ....... 47
    3.6.3.3 Volumetric strain ............................. 50

3.7 Fiber-reinforced soil ..................................... 52
  3.7.1 General .............................................. 52
    3.7.1.1 History ....................................... 53
  3.7.2 Types of fibers ...................................... 53
    3.7.2.1 Natural fibers ................................ 53
    3.7.2.2 Synthetic fibers ................................ 56
  3.7.3 Effects of reinforcement ............................ 56
    3.7.3.1 Mechanism of behavior in fiber-reinforced soils ....................... 56
3.7.3.2 Compaction ........................................ 58
3.7.3.3 Strength characteristics ............................ 59
3.7.3.4 Swelling and shrinkage ............................. 62
3.7.3.5 Hydraulic properties ............................... 64
3.7.3.6 Desiccation cracks ................................. 66
3.8 Hydraulic conductivity ................................... 67
3.8.1 General ............................................. 67
3.8.2 Saturated hydraulic conductivity ..................... 67
3.8.3 Unsaturated hydraulic conductivity ................... 68
3.8.4 Determination of unsaturated hydraulic conductivity 69
   3.8.4.1 Theoretical methods .............................. 69
   3.8.4.2 Experimental methods ............................ 72
3.8.5 Uprising moisture .................................. 74
   3.8.5.1 Uprising moisture in walls protected with countermeasure methods ......................... 75
3.9 Summary .............................................. 76

4 Material used and experimental program ................. 79
4.1 Introduction .......................................... 79
4.2 Materials used ...................................... 79
   4.2.1 Soil mixture ..................................... 80
   4.2.2 Straw ............................................. 81
4.3 Properties of material ................................ 82
   4.3.1 Basic properties .................................. 82
   4.3.2 Proctor compaction ............................... 83
   4.3.3 Scanning electron microscopy (SEM) ............. 84
   4.3.4 Porosimetry ...................................... 87
4.4 Experimental program .................................. 89
4.5 Summary .............................................. 90

5 Experimental techniques and procedures .................. 91
5.1 Introduction .......................................... 91
5.2 Techniques and procedures used for SWCC tests ....... 91
   5.2.1 Sample preparation ............................... 91
   5.2.2 Pressure plate apparatus (for ATT) ............... 92
   5.2.3 Desiccators (for VET) ............................. 93
5.3 Techniques and procedures used for plane strain tests
5.3.1 Sample description
5.3.2 Biaxial device
5.3.2.1 Loading system
5.3.2.2 Double wall technique, inner and outer cells
5.3.2.3 Side platens, top cap, and bottom platen
5.3.2.4 Systems to apply suction
5.3.3 Calibrations
5.3.3.1 Calibration of volume change indicators
5.3.3.2 Calibration of inner cell volume change
5.3.3.3 Calibration of other parts
5.3.4 Test procedure
5.3.4.1 Sample preparation and setup
5.3.4.2 Test procedure for saturated samples
5.3.4.3 Test procedure for unsaturated samples
5.3.5 Repeatability and verification of the results
5.4 Techniques and procedures used for wall tests
5.4.1 Measurements
5.4.1.1 Volumetric water content
5.4.1.2 Deformation
5.4.2 Calibrations
5.4.2.1 Calibration of TDRs
5.4.2.2 Calibration of PIV
5.4.3 Test procedure
5.4.3.1 Sample preparation
5.4.3.2 Description of experiments
5.5 Summary

6 Experimental results
6.1 Introduction
6.2 Results of SWCC tests
6.3 Results of biaxial tests
6.4 Results of wall tests
6.5 Saturated hydraulic conductivity
6.6 Summary
