Smart(er) Internet Regulation Through Cost-Benefit Analysis

Measuring harms to privacy, freedom of expression, and the internet ecosystem

Foreword by Olivier Bomsel
# Table of contents

## Foreword

- Designing an impact assessment for internet regulation
- Bringing smart telecommunications regulation to the internet
- The challenges of regulating access to content on the internet
- Current regulatory approaches are uncoordinated, with no guiding methodology
- Diminishing role of broadcasting regulation
- A methodology against which to measure regulatory proposals
- Existing literature
- How the remaining chapters are divided

## Chapter 1 - Managing Internet Risks

- Introduction
- Variable 1: Content policies
- Variable 2: Internet intermediaries
- Variable 3: The institutional framework
- Variable 4: Negative externalities caused by internet intermediary actions
- Solving the problem so as to maximize social benefits

## Chapter 2 - Presenting the Variables of the Cost-Benefit Equation

- Introduction
- Variable 1: Content policies
- Assisting law enforcement
- Valuing content policies and their enforcement
- Variable 2: Internet intermediaries
- Variable 3: The institutional framework
- Variable 4: Negative externalities caused by internet intermediary actions
- Solving the problem so as to maximize social benefits

## Chapter 3 - Balancing Fundamental Rights

- Introduction
What are fundamental rights? ................................................................. 84
Freedom of expression ................................................................. 90
Privacy ................................................................. 105
Fundamental rights and proportionality .............................................. 121

CHAPTER 4 - INSTITUTIONAL ALTERNATIVES FOR REGULATING ACCESS
TO INTERNET CONTENT ......................................................................... 141
Categories of institutional options .................................................. 141
General liability or property rules enforced by the courts ............... 142
Administrative regulation ................................................................. 148
Self-regulation ........................................................................ 156
Co-regulation ........................................................................ 172
Brousseau’s multilevel approach to governance ................................ 180
Internet requires a “racket and strings” regulatory approach .......... 183

CHAPTER 5 - BETTER REGULATION APPLIED TO THE INTERNET .............. 187
Introduction ........................................................................ 187
Literature on better regulation ....................................................... 188
OECD principles of better regulation ............................................. 193
Better regulation methodology in the United States ..................... 196
Better regulation methodology in Europe ..................................... 208
Impacts on innovation ................................................................. 221
Adaptive or experimental regulation ............................................. 225
Criticisms of cost-benefit analyses in regulatory decisions .......... 227
Why conduct a cost-benefit analysis? ........................................... 235

CHAPTER 6 - A METHODOLOGY FOR ASSESSING REGULATORY OPTIONS ..... 237
Bringing it all together ................................................................. 237
