1 Introduction 3

2 Modeling inventory systems 11
   2.1 A brief history of inventory management research 11
   2.2 Empirical validity of inventory models 13
   2.3 The practice of inventory management: human intervention and correlations 14
   2.4 Intervention frequency and inventory system performance 15
   2.5 Modeling time between order release and order receipt 17
   2.6 Conclusion on modeling inventory system 19

3 Single-item single-echelon inventory models 21
   3.1 Deterministic demand 21
   3.2 Stochastic demand 26

4 Uncapacitated multi-item multi-echelon models 37
   4.1 Material availability and stochastic lead times 38
   4.2 The example supply chain 39
   4.3 Modeling multi-echelon inventory systems 41
   4.4 Feasibility of order release quantities 43
   4.5 Synchronization and allocation 47
   4.6 Decision node structure for the case example 57
4.7 Control policies for divergent MIME systems ............................................. 62
4.8 Generalized Newsvendor equations for divergent MIME systems ...................... 65
4.9 Performance of SBS policies ............................................................................. 67
4.10 Empirical validity of SBS policies ..................................................................... 72
4.11 Positioning inventory in the supply chain ......................................................... 76

5 Capacitated inventory systems ............................................................................. 81
  5.1 Feasibility of order release quantities ................................................................. 83
  5.2 Comparison of rolling scheduling concepts ......................................................... 84
  5.3 Optimal policies for serial MIME systems ......................................................... 85
  5.4 Implicit modeling of finite capacity ..................................................................... 87

6 Conclusion ............................................................................................................. 89
