CHAPTER 2 Ecology and Economics in the Science of Anthropogenic Biosphere Change

Charles Perrings, Ann Kinzig

1 Introduction ........................................... 61
2 The Dynamics of Coupled Hierarchical Systems ........ 63
3 Carrying Capacity and Assimilative Capacity .......... 65
4 Resilience and Stability .................................. 67
5 Biodiversity and the Portfolio of Natural Assets .... 70
6 The Value of Ecosystem Functions ...................... 73
7 Concluding Remarks ................................... 76
References ............................................... 77

CHAPTER 3 The Nature of Natural Capital and Ecosystem Income

Eli P. Fenichel, Joshua K. Abbott, Seong Do Yun

1 Introduction ........................................... 86
2 Theory of Measuring Natural Capital Shadow Prices in Real Ecological-Economic Systems ................ 88
  2.1 Conceptualizing Natural Capital ...................... 88
  2.2 Derivation of Natural Capital Pricing Equations .... 91
  2.3 Intuition About Natural Capital Prices and the Importance of Multiple Stocks and Adjustment Costs ..... 98
  2.4 Non-convexity and Non-differentiability ........... 100
  2.5 Non-autonomous and Stochastic Dynamics .......... 102
  2.6 Using Shadow Prices to Assess Sustainable Investment/Consumption .................................. 104
3 Approximators to Measure Natural Capital Shadow Prices .......... 107
  3.1 Three Ways to Approximate Shadow Prices ......... 109
  3.2 Tradeoffs Among Approximation Approaches ....... 111
  3.3 The Approximation Domain .......................... 112
  3.4 Additional Numerical Considerations .............. 114
4 The Measurement of the Economic Program and Ecosystem Income and Its Connection to Natural Capital Asset Prices .......... 115
  4.1 The Economic Program – $x(s)$ ..................... 116
  4.2 Dividends from Natural Capital – $W$ ............... 119
  4.3 Ecosystem Income from Market Production .......... 120
  4.4 Ecosystem Income from Household Production ...... 122
  4.5 Direct Ecosystem Income ........................... 125
  4.6 Accounting for Ecosystem Income .................. 127
5 Examples and Applications to Date ..................... 128
6 Discussion and Future Challenges ...................... 131
References ............................................... 134
CHAPTER 4  Through the Looking Glass: Environmental Health Economics in Low and Middle Income Countries ......................... 143
Subhrendu K. Pattanayak, Emily L. Pakhtigian, Erin L. Litzow
1 The Economics of Environmental Health ....................... 144
  1.1 Environmental Health in LMICs .......................... 145
  1.2 Economics and Environmental Health ....................... 148
2 Choice and Behavior ............................................ 151
  2.1 Simple Analytics ........................................... 153
  2.2 Measuring Demand: Valuation (Willingness to Pay) ....... 155
  2.3 Shifting Demand: Adoption ................................ 158
  2.4 Predicting Impact: Evaluation .............................. 160
3 What We Know About Environmental Health in LMICs ......... 161
  3.1 Valuing Environmental Risk Reductions ................... 163
  3.2 Adopting Environmental Risk Reducing Technologies ... 167
  3.3 Evaluating Environmental Health Impacts ................. 171
4 Path Forward ................................................... 175
  4.1 Multiple Risks .............................................. 175
  4.2 Supply and Political Economy .............................. 177
  4.3 Environmental Hazards and Climate Change ............... 180
  4.4 Beyond Experiments and Average Treatment Effects ...... 181
  4.5 Closing Thoughts ......................................... 183
References ....................................................... 184

CHAPTER 5  The Farmer's Climate Change Adaptation Challenge in Least Developed Countries .......................... 193
Maximilian Auffhammer, Matthew E. Kahn
1 Introduction .................................................... 194
2 Historical and Anticipated Climate Change .................... 195
3 Estimating the Impacts of Climate Change on LDC Agriculture .................................................. 200
  3.1 The Impact of Climate Change on a Farmer’s Investment
      Decisions .................................................. 203
  3.2 Aggregation and General Equilibrium Effects .............. 209
4 The Farmer Climate Adaptation Challenge ....................... 210
  4.1 Income Inequality and Climate Change ..................... 211
  4.2 LDC Farmer Climate Change Adaptation Opportunities ... 212
  4.3 Rural Data Collection Needs to Accelerate Adaptation
      Research Progress ....................................... 213
  4.4 Rural to Urban Migration as an Adaptation Strategy ...... 214
  4.5 The Dimensionality of the LDC Migrant’s Urban Choice Set 215
5 General Equilibrium Effects Induced by Rapid Urbanization ... 216
  5.1 Urban Political Economy Issues Related to Climate Change
      Adaptation ................................................ 218
5.2 The Adaptation Benefits of LDC Urbanization .......................... 219
5.3 The Productivity of LDC Urban Firms in a Hotter World .... 220
5.4 Will LDC Urban Growth Significantly Exacerbate the 
    Global GHG Externality Challenge? ........................................ 221
5.5 Research Needs ................................................................. 222

6 Conclusion ................................................................. 223
References ................................................................. 223

CHAPTER 6 Selection and Design of Environmental Policy Instruments .... 231
Thomas Sterner, Elizabeth J.Z. Robinson

1 The Need for Policy ......................................................... 232
2 Policy Failures ................................................................. 234
3 The Menu of Instruments .................................................. 236
   3.1 Price-Type Instruments ................................................. 237
   3.2 Rights-Based Policies ................................................ 239
   3.3 Regulation ................................................................. 240
   3.4 Information or Legal-Based Policies ............................. 241
   3.5 The Process of Policy Making at National or Other Levels .. 242
4 The Selection of Instruments ............................................... 243
   4.1 Efficiency ................................................................. 244
   4.2 Information Asymmetries and Uncertainty ...................... 245
   4.3 Intertemporal Efficiency .............................................. 247
   4.4 Spatial Efficiency ...................................................... 248
   4.5 Practical and Political Aspects ...................................... 249
   4.6 Normative Principles, Distributional Aspects, and 
      Environmental Justice ................................................. 251
5 Selected Examples ......................................................... 253
   5.1 Taxing Carbon ........................................................... 254
   5.2 Taxing (and Subsidizing) Transport Fuel ......................... 258
   5.3 Cap and Trade Schemes ............................................. 260
   5.4 Refunding Emission Payments .................................... 262
   5.5 Regulation Versus Taxation: The Example of a Hazardous 
      Chemical ....................................................................... 264
   5.6 Policies to Modify Behavioral Norms ............................... 267
6 Designing Policies for the Anthropocene ................................. 269
   6.1 An Expansion of Geographic and Political Scope .............. 270
   6.2 Significant Extension in Time-Scale ............................... 273
   6.3 Significant Extension of the Number of Pollutants and 
      Scientific Complexity .................................................. 274
   6.4 Equity, Ethics, Risk, Uncertainty, and Governance .......... 274
References ................................................................. 276
### CHAPTER 7 Quasi-experimental Methods in Environmental Economics: Opportunities and Challenges

Olivier Deschênes, Kyle C. Meng
