Content

Foreword .......................................................... 5

1 New production and organisation strategies in response to changes in automobile markets. Introduction .......................................................... 7

1.1 "Partnership" as a core element in changed producer-supplier relations .......... 8
1.2 "Optimising the production and supply relations between component suppliers and producer": the joint project and its objectives ................. 10
1.3 The structure of the study ........................................... 12

2 A "learning project" with a powerful partner ..................................... 13

2.1 The partners in the project ............................................. 13
2.2 The firm's motives for involvement in the project .......................... 17

3 The car producer – a subsidiary caught between organisational dependency and technological leadership ........................................... 19

3.1 The assembly plant's position within the American automobile group ....... 19
3.2 Upheavals in the automobile group in the second half of the 1990s .......... 22
3.3 Producer-supply relations within the group straitjacket ...................... 24

4 Scope for action and the project's limitations ...................................... 26

4.1 Weak point analysis: an instrument for producing credibility and openness ...... 26
4.2 The potential of workshops as a means of optimising communication and co-operation .......................................................... 27
4.3 On the ambivalence of a dirigiste implementation strategy: the case of the quality manual and the need for co-operation based on partnership .......... 30
4.3.1 Developing a new idea: partnership or instruction from the centre? .......... 30
4.3.2 A strategic initiative on the part of the suppliers? ............................ 33
4.4 Inter-firm incident analysis: the acid test for learning processes based on partnership .......................................................... 35
4.4.1 The contradiction between day-to-day operations and systematic error analysis .... 36
4.4.2 Political imponderables as the stumbling blocks on the road to enlightenment ...... 36

5 The project and its resonances among the participants .......................... 37

5.1 The need for co-operation in resolving acute operational crises ............... 38
5.2 The need for improved communications in order to clarify and provide guidance on new requirements ........................................... 39
5.2.1 The need for communication and co-operation in order to optimise management systems .......................................................... 39
5.2.2 On the problematics of a continuing co-operative and learning association .... 40
6 Industrial policy conclusions .........................................................................................41

6.1 Project results ..............................................................................................................41
6.2 Industrial policy conclusions .......................................................................................44
6.2.1 External moderation and its functions in the development of inter-firm organisational structures .......................................................................................44
6.2.2 Regional industrial policy recommendations .............................................................45

Bibliography .....................................................................................................................47

Appendix ..............................................................................................................................49
