Coordinating Innovation: Evidence from Open Source Software Development

D I S S E R T A T I O N
of the University of St.Gallen,
Graduate School of Business Administration,
Economics, Law and Social Sciences (HSG)
to obtain the title of Doctor of Business Administration

submitted by

Petra Kugler
from
Germany

Approved on the application of

Prof. Dr. Georg F. von Krogh
and
Prof. Dr. Johannes Rüegg-Stürm

Dissertation no. 3094
Difo-Druck GmbH, Bamberg 2005
Part One

Coordination, Communities, Creative Innovation: Three Peculiarities of Open Source Software Development

1. Introduction

2. Literature Review: Organizational Coordination
   2.1. What is coordination and why is it essential to organizations?
   2.2. Market-versus firm coordination
   2.3. Formal firm coordination
   2.4. Informal firm coordination
   2.5. Firm coordination, organizational capabilities and new forms of organizing
   2.6. Research gaps

3. The Open Source Software Development Phenomenon
   3.1. What is open source software development?
   3.2. Open source software origin and licenses
   3.3. Influence on the global software- and hardware industries

4. Three Peculiarities of Coordination in Open Source Software Development
   4.1. Public good and the failure of traditional formal coordination mechanisms
   4.2. Reduced need for coordination in open source communities
   4.3. Simultaneous realization of stability and volatility: Dynamic capabilities

5. Conclusions

Endnotes Part 1
Part Two

Coordinating through Dominant Knowledge:
Evidence from the Freenet Open Source Software Development Project

1. Introduction

2. Literature Review: Open Source Software Development
   2.1. External perspective
   2.2. Internal perspective

3. Methods
   3.1. Exploratory single case study design
   3.2. Data sources & collection methods
   3.3. Data analysis in the tradition of grounded theorizing

4. Case Study Freenet: First Order Findings
   4.1. Freenet project basics
   4.2. Coordination through shared, project-specific knowledge
      4.2.1. Coordination despite of the lack of traditional mechanisms
      4.2.2. Core developers and peripheral members
      4.2.3. Coordination through taken for granted, shared knowledge
      4.2.4. Three types of knowledge
      4.2.5. Project-specific knowledge versus project-related knowledge
   4.3. Evolution of coordinating knowledge
      4.3.1. Individual creation of coordinating knowledge
      4.3.2. Capturing & replication of coordinating knowledge
      4.3.3. Transfer of coordinating knowledge
5. Case Study Freenet: Second Order Findings

5.1. Defining dominant knowledge as coordination mechanism

5.1.1. First condition: Three knowledge dimensions

5.1.2. Second condition: Organizational and repeatedly in use

5.1.3. Dominant knowledge definition

5.2. Evolution of dominant knowledge

5.2.1. Multi-step evolutionary process

5.2.2. First knowing advantage

6. What Dominant Knowledge is not

7. Concluding Remarks

Endnotes Part 2
Part Three
Informally Hierarchical: Structuring Innovative Work through a Knowledge Hierarchy in Open Source Software Development.
Model Generation and (partial) Testing

1. Introduction 157

2. Model Generation 162
   2.1 Methods 163
       2.1.1. Inductive single case study design and qualitative data 165
       2.1.2. Case sampling: The Freenet project 166
       2.1.3. Data types, data sources and collection methods 168
       2.1.4. Data analysis in the tradition of grounded theorizing 170
       2.2. First order analysis 170
           2.2.1. Indicators of a hierarchy in the Freenet project 170
           2.2.2. Bottom and top of the hierarchy 179
           2.2.3. Knowledge hierarchy 180
           2.2.4. Project dynamics and knowledge accumulation 182
           2.2.5. Factors that influence the individuals' project-specific knowledge 186
           2.2.6. Entry, exit and mobility barriers 197
       2.3. Second order analysis: Knowledge hierarchy definition and model 208

3. Model Testing 216
   3.1. Methods 216
       3.1.1. Community sampling 216
       3.1.2. Variable operationalization and data sources 218
       3.1.3. Data analysis 222
       3.2. Findings and discussion of quantitative findings 225

4. Discussion and Concluding Remarks 242

Endnotes Part 3 247
Dissertation Summary & Conclusions

References

List of Appendices

1. The open source definition
2. Interview partners: Name and date
3. Guidelines for interviews with Freenet core developers (first and second round)
4. First contact email to Freenet peripheral contributors
5. Open questions survey sent to Freenet peripheral members (third round)
6. Comparison of qualitative findings: Differences between Freenet core developers and peripheral members
7. Comparison of quantitative findings: Differences between Freenet core developers and peripheral members
8. First contact email to project maintainers: Questionnaire on a knowledge hierarchy
9. Web-based questionnaire introduction
10. Web-based questionnaire to OSS project members
