ESSAYS ON MARKET MECHANISM AND MARKET PARTICIPANTS’
BIDDING BEHAVIORS IN ELECTRICITY MARKET

A Dissertation
Presented to the Faculty of the Graduate School
of Cornell University
in Partial Fulfillment of the Requirements for the Degree of
Doctor of Philosophy

by
Ning Zhang
August 2005
TABLE OF CONTENTS

BIOGRAPHIC SKETCH---------------------------------------------------------------------------------------------------iii
DEDICATION----------------------------------------------------------------------------------------------------------iv
ACKNOWLEDGMENT-----------------------------------------------------------------------------------------------------v
LIST OF TABLES------------------------------------------------------------------------------------------------------xi
LIST OF FIGURES-----------------------------------------------------------------------------------------------------xiii

CHAPTER ONE: Introduction-------------------------------------------------------------------------------------------1

CHAPTER TWO: Generators' Bidding Behavior in the NYISO Day-Ahead Wholesale Electricity Market in the Summer of 2001-----------------------------------------------9

1. Introduction-------------------------------------------------------------------------------------------------------9

2. Classification of Generators Bidding in the NYISO DA Wholesale Electricity Market----------------------------------12

3. Estimate Generators' Bidding Behavior in the NYISO DA Wholesale Electricity Market--------------------------------20

3.1 Generator Level Analysis: Estimate the daily offered capacity of each generator by a two-stage sample selection model------------------22

3.2 Group Level Analysis: Simulate the daily offer curve of each bidding group-------------------------------------------46

3.3 Total Supply Analysis: Simulate the Aggregate Supply Curve----------------------------------------------------------53

4. Simulate Market Prices in the Summer of 2001---------------------------------------------------------------------54

4.1 Simulate Market Prices in the Summer of 2001 Using Simulated Aggregate Supply Curve and Actual Load------------------55
4.2 Simulate Real Time Market Prices in the Summer of 2001 under Different Demand Conditions

Appendix 2A: Asymptotic Covariance Matrix for the Coefficients of Structure Equation

Appendix 2B: Comparison between PA Dynamic Model and Dynamic RE Model

Appendix 2C: Method to Calculate the Average Partial Effects of Regressors on the Response Probabilities of Generators' Grouping Choices

References

CHAPTER THREE: Market Performance and Bidders' Bidding Behavior in the NYISO TCC Auction Market

1. Introduction

2. The NYISO Transmission Congestion Contract (TCC) Market

3. Literature Review on Theories of Equilibrium Bidding Strategies in Uniform Price Auctions for Multi-Unit Goods and Their Empirical Implications

3.1 Theories on Equilibrium Bidding Strategies in Common-Value Multi-Unit Uniform Price Auctions

3.2 Empirical Implications

4.1 Descriptive Statistics on Bidders' Net Profit by Under-Pricing TCCs

4.2 Methodology

4.3 Empirical Results
5. Empirical Analysis on Bidders’ Bidding Variables Using Bidder Level Data for the NYISO’s Monthly Reconfiguration TCC Auctions—130

5.1 Descriptive Statistics on the Variables Used in Regression—130

5.2 Methodology—134

5.3 Empirical Results—135

6. Conclusions—144

Appendix 3A: Technical Details about AR-GARCH Method—146

3A.1 Cluster Analysis—146

3A.2 AR-GARCH Model for Forecasting One-Month-Ahead Conditional Mean and Conditional Variance of Congestion Rents for 25 Re-Defined TCC Commodities—150

Appendix 3B: Technical Details about VARMAX-GARCH Method—180

3B.1 VARMAX Model for Forecasting One-Month-Ahead Monthly Conditional Mean of Congestion Rents—180

3B.2 GARCH Model for Forecasting One-Month-Ahead Monthly Conditional Variance of Congestion Rents—190

References—199

CHAPTER FOUR: Models for Security Investment in Electricity Market—205

1. Introduction—205

2.1 Model Setup—207

2.2 Pareto Optimal Solution—208

3. Models of System Security Provided by the Market Participants of Electricity Market—211

3.1 System Security Provided by Supply Side of Electricity Market—212
3.2 System Security Provided by Demand Side of Electricity Market———217

3.3 System Security Provided by both Suppliers and Consumers of Electricity Market-------------------------------------------------------------222

4. Models of System Security Provided by an Independent and Centralized Organization-------------------------------------------------------------225

5. Illustrative Examples-----------------------------------------------------------------------------------------------------------------228

6. Conclusion Remarks--------------------------------------------------------------------------------------------------------------------230
