Preface	XV
1 Probability Tools for Stochastic Modelling	1
1 The Sample Space	1
2 Probability Space	2
3 Random Variables	6
4 Integrability, Expectation and Independence	8
5 Main Distribution Probabilities	14
5.1 The Binomial Distribution	15
5.2 The Poisson Distribution	16
5.3 The Normal (or Laplace-Gauss) Distribution	16
5.4 The Log-Normal Distribution	19
5.5 The Negative Exponential Distribution	20
5.6 The Multidimensional Normal Distribution	20
6 Conditioning (From Independence to Dependence)	22
6.1 Conditioning: Introductory Case	22
6.2 Conditioning: General Case	26
6.3 Regular Conditional Probability	30
7 Stochastic Processes	34
8 Martingales	37
9 Brownian Motion	40
2 Renewal Theory and Markov Chains	43
1 Purpose of Renewal Theory	43
2 Main Definitions	44
3 Classification of Renewal Processes	45
4 The Renewal Equation	50
5 The Use of Laplace Transform	55
5.1 The Laplace Transform	55
5.2 The Laplace-Stieltjes (L-S) Transform	55
6 Application of Wald's Identity	56
7 Asymptotical Behaviour of the $N(t)$ -Process	57
8 Delayed and Stationary Renewal Processes	57
9 Markov Chains	58
9.1 Definitions	58
9.2 Markov Chain State Classification	62
9.3 Occupation Times	66
9.4 Computations of Absorption Probabilities	67
9.5 Asymptotic Behaviour	67

9.6 Examples	71
9.7 A Case Study in Social Insurance (Janssen (1966))	74
3 Markov Renewal Processes, Semi-Markov Processes And Markov Random Walks	77
1 Positive (J-X) Processes	77
2 Semi-Markov and Extended Semi-Markov Chains	78
3 Primary Properties	79
4 Examples	83
5 Markov Renewal Processes, Semi-Markov and Associated Counting Processes	85
6 Markov Renewal Functions	87
7 Classification of the States of an MRP	90
8 The Markov Renewal Equation	91
9 Asymptotic Behaviour of an MRP	92
9.1 Asymptotic Behaviour of Markov Renewal Functions	92
9.2 Asymptotic Behaviour of Solutions of Markov Renewal Equations	93
10 Asymptotic Behaviour of SMP	94
10.1 Irreducible Case	94
10.2 Non-irreducible Case	96
10.2.1 Uni-Reducible Case	96
10.2.2 General Case	97
11 Delayed and Stationary MRP	98
12 Particular Cases of MRP	102
12.1 Renewal Processes and Markov Chains	102
12.2 MRP of Zero Order (PYKE (1962))	102
12.2.1 First Type of Zero Order MRP	102
12.2.2 Second Type of Zero Order MRP	103
12.3 Continuous Markov Processes	104
13 A Case Study in Social Insurance (Janssen (1966))	104
13.1 The Semi-Markov Model	104
13.2 Numerical Example	105
14 (J-X) Processes	106
15 Functionals of (J-X) Processes	107
16 Functionals of Positive (J-X) Processes	111
17 Classical Random Walks and Risk Theory	112
17.1 Purpose	112
17.2 Basic Notions on Random Walks	112
17.3 Classification of Random Walks	115
18 Defective Positive (J-X) Processes	117
19 Semi-Markov Random Walks	121

20	Distribution of the Supremum for Semi-Markov Random Walks	123
21	Non-Homogeneous Markov and Semi-Markov Processes	124
21.1	General Definitions	124
21.1.1	Completely Non-Homogeneous Semi-Markov Processes	124
21.1.2	Special Cases	128
4	Discrete Time and Reward SMP and their Numerical Treatment	131
1	Discrete Time Semi-Markov Processes	131
1.1	Purpose	131
1.2	DTSMP Definition	131
2	Numerical Treatment of SMP	133
3	DTSMP and SMP Numerical Solutions	137
4	Solution of DTHSMP and DTNHSMP in the Transient Case:	
a	Transportation Example	142
4.1.	Principle of the Solution	142
4.2.	Semi-Markov Transportation Example	143
4.2.1	Homogeneous Case	143
4.2.2	Non-Homogeneous Case	147
5	Continuous and Discrete Time Reward Processes	149
5.1	Classification and Notation	150
5.1.1	Classification of Reward Processes	150
5.1.2	Financial Parameters	151
5.2	Undiscounted SMRWP	153
5.2.1	Fixed Permanence Rewards	153
5.2.2	Variable Permanence and Transition Rewards	154
5.2.3	Non-Homogeneous Permanence and Transition Rewards	155
5.3	Discounted SMRWP	156
5.3.1	Fixed Permanence and Interest Rate Cases	156
5.3.2	Variable Interest Rates, Permanence and Transition Cases	158
5.3.3	Non-Homogeneous Interest Rate, Permanence and Transition Case	159
6	General Algorithms for DTSMRWP	159
7	Numerical Treatment of SMRWP	161
7.1	Undiscounted Case	161
7.2	Discounted Case	163
8	Relation Between DTSMRWP and SMRWP Numerical Solutions	165
8.1	Undiscounted Case	166
8.2	Discounted Case	168

5 Semi-Markov Extensions of the Black-Scholes Model	171
1 Introduction to Option Theory	171
2 The Cox-Ross-Rubinstein (CRR) or Binomial Model	174
2.1 One-Period Model	175
2.1.1 The Arbitrage Model	176
2.1.2 Numerical Example	177
2.2 Multi-Period Model	178
2.2.1 Case of Two Periods	178
2.2.2 Case of n Periods	179
2.2.3 Numerical Example	180
3 The Black-Scholes Formula as Limit of the Binomial Model	181
3.1 The Log-Normality of the Underlying Asset	181
3.2. The Black-Scholes Formula	183
4 The Black-Scholes Continuous Time Model	184
4.1 The Model	184
4.2 The Itô or Stochastic Calculus	184
4.3 The Solution of the Black-Scholes-Samuelson Model	186
4.4 Pricing the Call with the Black-Scholes-Samuelson Model	188
4.4.1 The Hedging Portfolio	188
4.4.2 The Risk Neutral Measure and the Martingale Property	190
4.4.3 The Call-Put Parity Relation	191
5 Exercise on Option Pricing	192
6 The Greek Parameters	193
6.1 Introduction	193
6.2 Values of the Greek Parameters	195
6.3 Exercises	196
7 The Impact of Dividend Distribution	198
8 Estimation of the Volatility	199
8.1 Historic Method	199
8.2 Implicit Volatility Method	200
9 Black and Scholes on the Market	201
9.1 Empirical Studies	201
9.2 Smile Effect	201
10 The Janssen-Manca Model	201
10.1 The Markov Extension of the One-Period CRR Model	202
10.1.1 The Model	202
10.1.2 Computational Option Pricing Formula for the One-Period Model	206

10.1.3 Examples	207
10.2 The Multi-Period Discrete Markov Chain Model	209
10.3 The Multi-Period Discrete Markov Chain Limit Model	211
10.4 The Extension of the Black-Scholes Pricing Formula with Markov Environment: The Janssen-Manca Formula	213
11 The Extension of the Black-Scholes Pricing Formula with Markov Environment: The Semi-Markovian Janssen-Manca-Volpe formula	216
11.1 Introduction	216
11.2 The Janssen-Manca-Çinlar Model	216
11.2.1 The JMC (Janssen-Manca-Çinlar) Semi-Markov Model (1995, 1998)	217
11.2.2 The Explicit Expression of $S(t)$	218
11.3 Call Option Pricing	219
11.4 Stationary Option Pricing Formula	221
12 Markov and Semi-Markov Option Pricing Models with Arbitrage Possibility	222
12.1 Introduction to the Janssen-Manca-Di Biase Models	222
12.2 The Homogeneous Markov JMD (Janssen-Manca-Di Biase) Model for the Underlying Asset	223
12.3 Particular Cases	224
12.4 Numerical Example for the JMD Markov Model	225
12.5 The Continuous Time Homogeneous Semi-Markov JMD Model for the Underlying Asset	227
12.6 Numerical Example for the Semi-Markov JMD Model	228
12.7 Conclusion	229
6 Other Semi-Markov Models in Finance and Insurance	231
1 Exchange of Dated Sums in a Stochastic Homogeneous Environment	231
1.1 Introduction	231
1.2 Deterministic Axiomatic Approach to Financial Choices	232
1.3 The Homogeneous Stochastic Approach	234
1.4 Continuous Time Models with Finite State Space	235
1.5 Discrete Time Model with Finite State Space	236
1.6 An Example of Asset Evaluation	237
1.7 Two Transient Case Examples	238
1.8 Financial Application of Asymptotic Results	244
2 Discrete Time Markov and Semi-Markov Reward Processes and Generalised Annuities	245

2.1 Annuities and Markov Reward Processes	246
2.2 HSMRWP and Stochastic Annuities Generalization	248
3 Semi-Markov Model for Interest Rate Structure	251
3.1 The Deterministic Environment	251
3.2 The Homogeneous Stochastic Interest Rate Approach	252
3.3 Discount Factors	253
3.4 An Applied Example in the Homogeneous Case	255
3.5 A Factor Discount Example in the Non-Homogeneous Case	257
4 Future Pricing Model	259
4.1 Description of Data	260
4.2 The Input Model	261
4.3 The Results	262
5 A Social Security Application with Real Data	265
5.1 The Transient Case Study	265
5.2 The Asymptotic Case	267
6 Semi-Markov Reward Multiple-Life Insurance Models	269
7 Insurance Model with Stochastic Interest Rates	276
7.1 Introduction	276
7.2 The Actuarial Problem	276
7.3 A Semi-Markov Reward Stochastic Interest Rate Model	277
7 Insurance Risk Models	281
1 Classical Stochastic Models for Risk Theory and Ruin Probability	281
1.1 The G/G or E.S. Andersen Risk Model	282
1.1.1 The Model	282
1.1.2 The Premium	282
1.1.3 Three Basic Processes	284
1.1.4 The Ruin Problem	285
1.2 The P/G or Cramer-Lundberg Risk Model	287
1.2.1 The Model	287
1.2.2 The Ruin Probability	288
1.2.3 Risk Management Using Ruin Probability	293
1.2.4 Cramer's Estimator	294
2 Diffusion Models for Risk Theory and Ruin Probability	301
2.1 The Simple Diffusion Risk Model	301
2.2 The ALM-Like Risk Model (Janssen (1991), (1993))	302
2.3 Comparison of ALM-Like and Cramer-Lundberg Risk Models	304
2.4 The Second ALM-Like Risk Model	305
3 Semi-Markov Risk Models	309

3.1 The Semi-Markov Risk Model (or SMRM)	309
3.1.1 The General SMR Model	309
3.1.2 The Counting Claim Process	312
3.1.3 The Accumulated Claim Amount Process	314
3.1.4 The Premium Process	315
3.1.5 The Risk and Risk Reserve Processes	316
3.2 The Stationary Semi-Markov Risk Model	316
3.3 Particular SMRM with Conditional Independence	316
3.3.1 The SM/G Model	317
3.3.2 The G/SM Model	317
3.3.3 The P/SM Model	317
3.3.4 The M/SM Model	318
3.3.5 The M'/SM Model	318
3.3.6 The SM(0)/SM(0) Model	318
3.3.7 The SM'(0)/SM'(0) Model	318
3.3.8 The Mixed Zero Order SM'(0)/SM(0) and SM(0)/SM'(0) Models	319
3.4 The Ruin Problem for the General SMRM	320
3.4.1 Ruin and Non-Ruin Probabilities	320
3.4.2 Change of Premium Rate	321
3.4.3 General Solution of the Asymptotic Ruin Probability Problem for a General SMRM	322
3.5 The Ruin Problem for Particular SMRM	324
3.5.1 The Zero Order Model SM(0)/SM(0)	324
3.5.2 The Zero Order Model SM'(0)/SM'(0)	325
3.5.3 The Model M/SM	325
3.5.4 The Zero Order Models as Special Case of the Model M/SM	328
3.6 The M'/SM Model	329
3.6.1 General Solution	329
3.6.2 Particular Cases: the M/M and M'/M Models	332
8 Reliability and Credit Risk Models	335
1 Classical Reliability Theory	335
1.1 Basic Concepts	335
1.2 Classification of Failure Rates	336
1.3 Main Distributions Used in Reliability	338
1.4 Basic Indicators of Reliability	339
1.5 Complex and Coherent Structures	340
2 Stochastic Modelling in Reliability Theory	343
2.1 Maintenance Systems	343
2.2 The Semi-Markov Model for Maintenance Systems	346
2.3 A Classical Example	348

3 Stochastic Modelling for Credit Risk Management	351
3.1 The Problem of Credit Risk	351
3.2 Construction of a Rating Using the Merton Model for the Firm	352
3.3 Time Dynamic Evolution of a Rating	355
3.3.1 Time Continuous Model	355
3.3.2 Discrete Continuous Model	356
3.3.3 Example	358
3.3.4 Rating and Spreads on Zero Bonds	360
4 Credit Risk as a Reliability Model	361
4.1 The Semi-Markov Reliability Credit Risk Model	361
4.2 A Homogeneous Case Example	362
4.3 A Non-Homogeneous Case Example	365
9 Generalised Non-Homogeneous Models for Pension Funds and Manpower Management	373
1 Application to Pension Funds Evolution	373
1.1 Introduction	374
1.2 The Non-homogeneous Semi-Markov Pension Fund Model	375
1.2.1 The DTNHSM Model	376
1.2.2 The States of DTNHSMPFM	379
1.2.3 The Concept of Seniority in the DTNHSPFM	379
1.3 The Reserve Structure	382
1.4 The Impact of Inflation and Interest Variability	383
1.5 Solving Evolution Equations	385
1.6 The Dynamic Population Evolution of the Pension Funds	389
1.7 Financial Equilibrium of the Pension Funds	392
1.8 Scenario and Data	395
1.8.1 Internal Scenario	396
1.8.2 Historical Data	396
1.8.3 Economic Scenario	397
1.9 Usefulness of the NHSMPFM	398
2 Generalized Non-Homogeneous Semi-Markov Model for Manpower Management	399
2.1 Introduction	399
2.2 GDTNHSM for the Evolution of Salary Lines	400
2.3 The GDTNHSMRWP for Reserve Structure	402
2.4 Reserve Structure Stochastic Interest Rate	403
2.5 The Dynamics of Population Evolution	404
2.6 The Computation of Salary Cost Present Value	405
