

New Zealand Energy Strategy to 2050

Powering Our Future

**Towards a sustainable
low emissions energy system**

October 2007

C 254406

Contents

Foreword	5
Part 1: Our vision	7
1. Introduction	8
1.1 Engagement with stakeholders	9
1.2 Links with other policies	9
1.3 Our energy system	11
2. Our challenges	12
2.1 Energy security	12
2.1.1 Electricity security of supply	13
2.2 Climate change	13
3. Our energy vision for New Zealand	15
4. From vision to action	16
4.1 Progress made	16
4.2 Strategic leadership	17
4.2.1 Key actions	17
4.3 Markets, regulation and security of supply	18
4.3.1 Electricity	18
4.3.2 Transport	18
4.3.3 Energy diversity	18
4.3.4 Key actions	19
4.4 Pricing greenhouse gas emissions	20
4.4.1 Key actions	20
4.5 Using energy more efficiently	21
4.5.1 Key actions	21
4.6 Promoting renewable energy	22
4.6.1 Electricity	22
4.6.2 Transport	23
4.6.3 Direct use of biomass	24
4.6.4 Key actions	24
4.7 Facilitating environmentally sustainable energy technologies	24
4.7.1 Key actions	25
4.8 Supporting consumers through the transition	26
4.8.1 Key actions	26

5. Our direction	27
5.1 Pathway to a low emissions future	27
5.1.1 Reducing energy sector emissions	29
5.2 Effect of this strategy on prices	38
5.2.1 Electricity costs	38
5.2.2 Transport fuel costs	40
5.3 Conclusions	40
Part 2: Our actions	41
6. Introduction	42
6.1 Delivery	43
6.2 Implementation	43
6.3 Monitoring and assessment	43
7. Resilient, low carbon transport	44
7.1 Our direction	46
7.2 Linking with other strategies	48
7.3 The progress we've made	49
7.4 Our actions	49
7.4.1 Managing the demand for travel	50
7.5 More efficient transport modes	51
7.5.1 Land passenger travel	51
7.5.2 Land and marine freight movement	52
7.5.3 Aviation	53
7.6 Increasing the efficiency of the vehicle fleet	54
7.7 Developing and adopting a diverse range of fuels	55
7.7.1 Biofuels	56
7.7.2 Electric powered vehicles	56
7.7.3 LPG	57
7.7.4 Hydrogen	58
7.8 Short-term oil security	58
7.9 Into the future	58
8. Security of electricity supply	59
8.1 Our direction	60
8.2 Factors affecting security	61
8.2.1 Energy sources and generation options	62
8.2.2 Supply security in a market context	62
8.2.3 Supply security with a greater proportion of renewable generation	64
8.2.4 Coordination of generation and transmission	65
8.2.5 Oversight of supply security	66
8.2.6 Managing dry-year security in the market context	66
8.2.7 Role of fossil fuel power stations	66
8.2.8 Role of demand-side response	67

8.3 The progress we've made	67
8.3.1 Encouraging effective competition and investment	67
8.3.2 Investment in transmission and distribution networks	67
8.3.3 Gas market initiatives	67
8.4 Our actions	68
8.4.1 Improving market arrangements	68
8.4.2 Managing intermittent renewable generation	68
8.4.3 Facilitating transmission planning and upgrades	69
8.4.4 Improving gas market arrangements and availability	69
8.4.5 Improving demand-side response	69
8.4.6 Enabling lines companies to undertake energy efficiency initiatives	70
8.4.7 Reviewing supplier obligations	70
8.5 Into the future	70
9. Low emissions power and heat	71
9.1 Our direction	72
9.1.1 Reflecting the cost of emissions	72
9.1.2 Our renewable energy potential	73
9.1.3 Distributed generation and small-scale generation	74
9.1.4 Direct use of indigenous energy resources for heat	75
9.2 The progress we've made	76
9.2.1 Enabling renewables	76
9.2.2 Encouraging direct use	77
9.2.3 Facilitating distributed generation	77
9.3 Our actions	77
9.3.1 Valuing low emissions energy	77
9.3.2 Maximising the contribution of renewables electricity	78
9.3.3 Leadership on the future role of fossil-fired generation	80
9.3.4 Carbon capture and storage	80
9.3.5 Environmental effects and the Resource Management Act	80
9.3.6 Coordination of transmission and renewable generation investment	81
9.4 Into the future	81
10. Using energy more efficiently	82
10.1 Our direction	83
10.2 The progress we've made	84
10.3 Our actions	84
10.3.1 <i>The New Zealand Energy Efficiency and Conservation Strategy</i>	85
10.3.2 Filling information gaps	85
10.3.3 Government discount rates	85
10.3.4 Opportunities for greater energy efficiency	86
10.3.5 Promoting energy efficiency	87
10.4 Into the future	89

11. Sustainable energy technologies and innovation	90
11.1 Our direction	91
11.2 The progress we've made	93
11.2.1 <i>Energy Research Roadmap</i>	93
11.2.2 Public energy research and development	93
11.2.3 International partnerships and collaborative research	93
11.3 Our actions	94
11.3.1 Enabling zero and low carbon technologies	94
11.3.2 Energy innovation priorities	94
11.3.3 Increasing capabilities and improving coordination	95
11.3.4 Strengthening international linkages	96
11.3.5 Accelerating innovation	96
11.4 Into the future	97
12. Affordability and wellbeing	98
12.1 Our direction	99
12.2 Our actions	99
12.2.1 Household energy use	99
12.2.2 Transport accessibility	101
12.2.3 Making informed energy choices	102
Glossary	103
New Zealand's energy flows for the 2006 calendar year	107
