CONTENTS

<i>Table of Cases</i>	xliii
<i>Table of Legislation</i>	xliv
<i>Table of Treaties and Conventions</i>	li

I THE CONTEXT

1. Restructuring Taxes to Sustain our Twenty-First Century Civilization	
A. Learning from China	1.08
B. Learning from the Past	1.19
C. Food and Fuel Compete for Land	1.30
D. Harnessing the Wind	1.46
E. Hybrid Cars and Wind Power	1.66
F. Cutting Carbon Emissions Fast	1.74
G. Getting the Price Right	1.88
H. A Wartime Mobilization	1.99
I. Plan B—A Plan of Hope	1.108

II MOVING FROM THEORY TO PRACTICE— IMPLEMENTATION OF ENVIRONMENTAL TAXES AND OTHER ECONOMIC INSTRUMENTS

Political Acceptability

2. Some Quasi-behavioural Arguments for Environmental Taxation	
A. Traditional Economic Arguments	2.07
B. Environmental Taxation and Decentralized Trading Programmes	2.12
C. Opposition to Environmental Taxes	2.15

D. Some Quasi-behavioural Arguments	2.18
Inducing innovation by engaging the entrepreneurial energies of the firm	2.19
Some anecdotal evidence	2.23
A red herring	2.27
Narrowing options	2.29
Reducing perverse incentives to preserve polluting capital	2.35
Public discourse effects	2.44
E. Conclusion	2.51
3. Gradual Introduction of Coercive Instruments in Climate Policy	
A. Introduction	3.01
B. Background Material	3.06
The level of CO ₂ emissions	3.08
The evolution of energy consumption and CO ₂ emissions	3.12
Swiss climate policy: a mixed bag	3.15
C. The Making of the CO ₂ Law	3.21
The 1994 project	3.22
The 1997 project and 1999 CO ₂ Law	3.25
Assessment	3.30
D. Setting up Voluntary Approaches	3.31
Declarations of self-regulation	3.32
Assessment	3.39
E. Reneging the CO ₂ Law Commitment	3.44
Forecasts of CO ₂ emissions: will the targets be met?	3.44
The 'climate penny' was pulled out of a hat	3.49
Will there be a CO ₂ tax on heating and process fuel?	3.55
F. Concluding Assessment	3.58
The unravelling of a good approach	3.58
Lessons to be learned	3.61
References	72

Competitiveness

4. Environmental Tax Reform in Europe: Energy Tax Rates and Competitiveness	
A. Introduction	4.01
B. Competitiveness and Environmental Taxes	4.05
C. ETRs in Europe	4.13

Introduction	4.13
ETR in Europe: environmental taxes, labour taxes, and exemptions	4.21
ETR in individual countries	4.30
Denmark	4.30
Finland	4.38
Germany	4.42
The Netherlands	4.46
Sweden	4.48
The United Kingdom	4.52
Conclusion	4.55
D. Evolution of Energy Tax Rates	4.57
E. Evolution of Energy Prices	4.61
F. Conclusion	4.67

Institutional Issues

5. Institutional Building and the Introduction of Economic Instruments in Australia—The Path Ahead

A. Introduction	5.01
B. Background	5.03
Sources of greenhouse gas emissions	5.04
Constitutional framework	5.06
The Australian response to climate change	5.08
The government's Kyoto discourse	5.08
Australian government GHG emission reduction expenditure— fiddling while Australia burns	5.09
C. Australian Public Institutions and the Politics of Climate Change	5.13
Benchmark public sector governance principles	5.13
Lowering the veil of secrecy	5.16
The government fails to adopt a holistic, whole of government approach in developing public policy with respect to specific issues	5.20
Opacity of government information	5.24
Politicized/combatative/don't tell us and we won't ask	5.26
Studied ignorance	5.29
Non-inclusive 'public' consultation	5.30
Receptive to interest group pressure, and publicly perceived to be such	5.31
Controlling the discourse—dissemination of views through the media	5.39
D. Conclusion—what is to be done?	5.43

6. New Instruments on Old Turf: The Institutional Challenges of Environmental Taxation	
A. Introduction	6.01
B. The Forces of Fragmentation	6.06
The committees' jurisdictional divide in Congress: creating fragmentation	6.06
The committee referral process: implementing fragmentation	6.08
The committee referral rules	6.08
The Energy Policy Act referrals	6.11
The Superfund tax referrals	6.13
Congressional conference committees: fragmentation may continue	6.19
Fragmentation at the agency level	6.22
The Department of Treasury	6.23
The Environmental Protection Agency	6.25
The Department of Energy	6.27
The Council on Environmental Quality	6.29
Why worry?	6.30
C. Institutional Elements that Attempt to Create Cross-jurisdictional Perspectives	6.34
The congressional rules: policy integration (in theory)	6.35
Obligation to study tax effect	6.36
Oversight plans	6.37
Tax expenditure studies	6.38
Overlapping committee membership	6.41
Expert resources for integrated policy-making, design, and evaluation	6.42
Congressional staff and hearings	6.43
Agencies offering expertise	6.46
The budget process: integrating agencies' programme design, in theory	6.51
The Government Performance and Results Act	6.52
The government-wide plan	6.54
Agency performance plans	6.55
Strategic plans	6.56
Mandating agency consultation: integrating expertise during implementation	6.58
Consultation on criteria	6.59
Consultation in programme design and project certification	6.60
The benefits of consultations	6.62
D. Conclusion	6.63

Design and Choice of Instruments

7. Applying the Principles of Adaptive Policy Design to Environmental Taxes	
A. Introduction	7.01
B. The Unpredictable Future	7.03
C. Adaptive Policy and Ecosystem Management	7.08
D. Designing Adaptive Policy Instruments	7.12
E. Towards Adaptive Environmental Taxation	7.22
F. Conclusion	7.26
8. Ecological Tax Reform and Emissions Trading—Can They Work Together in Practice? An Empirical Analysis for Germany	
A. Does Emissions Trading Supersede Ecological Tax Reform?	8.01
Appraisal Criteria	8.05
Objectives	8.06
Ecological tax reform	8.06
Emissions trading	8.09
Structures	8.11
Ecological tax reform	8.11
Emissions trading	8.16
Sector-specific economic and social impacts	8.21
Ecological tax reform	8.21
Emissions trading	8.24
Administrative effort	8.27
Ecological tax reform	8.27
Emissions trading	8.28
Financial flows	8.29
Ecological tax reform	8.29
Emissions trading	8.31
Social acceptance	8.34
Ecological tax reform	8.34
Emissions trading	8.36
Legal evaluation	8.39
Ecological tax reform	8.39
EU Emissions Trading Scheme	8.40
Environmental impacts	8.43
Ecological tax reform	8.43
EU Emissions Trading Scheme	8.47

B. Interim Summary: Overlaps and Complementarities	8.48
Transport sector	8.49
Industry and energy sector	8.52
Private households	8.58
Crafts and trades, retail and services	8.59
Better complementarity between the two instruments	8.62
Emissions trading approach	8.63
Eco-tax approach	8.67
Making businesses taking part in emissions trading generally exempt from eco-tax	8.68
Businesses taking part in emissions trading pay a reduced eco-tax, those parts of the business not participating in emissions trading (administration, etc) pay the full eco-tax rates	8.71
Reductions in electricity tax for particularly energy-intensive Industries	8.72
Introduction of a comprehensive primary energy taxation System	8.73
Is such theoretically desirable optimization politically wise?	8.75
C. Conclusions	8.78
9. Coordinating Energy Taxes with the EU Emission Trading System	
A. Comparing Taxes and Tradable Permits	9.06
B. Legal Framework for Energy Taxes and Emissions Trading in the European Union	9.09
The Energy Taxation Directive	9.09
The EU Emission Trading Directive	9.15
Regulatory overlap	9.20
C. State Aid Regimes under the Energy Taxation Directive	9.24
The text of the Energy Taxation Directive	9.31
Decisions of the European Commission on Article 17(4) of the Energy Taxation Directive	9.35
D. The Environmental State Aid Guidelines	9.39
E. Simultaneous Use of Energy Taxation and Emission Trading in Europe	9.47
The Dutch regulatory energy tax	9.51
The UK Climate Change Levy	9.59
F. Exemptions from Energy Taxation for Companies Covered by the EU Emission Trading Scheme	9.65
Some relevant criteria to access the compatibility of exemptions with the EU Treaty	9.69

G. Discussion on the Coordination between Energy Taxes and Tradable Permits	9.78
As a principle, energy taxes and tradable permits should not be cumulated	9.83
The allocation method	9.89
Possible approaches within the current legal framework	9.92
Further exemptions or reductions authorized by the Council	9.92
Opt-out regimes	9.95
H. Concluding Remarks	9.97
10. Fraying Over Paying: Who Will Bear the Costs of Greenhouse Policy?	
A. Introduction	10.01
B. Jaccard, Rivers, and Horne Plan	10.08
C. Internationally-based Tradable Permits	10.13
D. Model and Data Overview	10.16
CREAP data	10.17
CMRT model	10.20
Production	10.21
Provincial representative agents and final demand	10.24
Trade and import aggregation	10.25
Rest of world	10.26
Energy/GHG features	10.27
New renewable electricity	10.28
Sequestration and sinks	10.29
Permit coverage	10.32
Key uncertainties	10.33
E. Simulation Results	10.34
Climate change alternatives under benchmark financing rule	10.36
IPT	10.37
JHR-MA	10.43
JHR-LA	10.46
Comparisons	10.48
Climate change options under alternative financing rules	10.50
F. Concluding Remarks	10.51
References	254
11. The Political Economy of Taxes and Emissions Trading in Australia's Climate Change Policies	
A. Introduction	11.01

B. Pricing Signals	11.07
Energy taxes	11.12
The evolution of tradable permits in Australia's climate change policies	11.18
C. Supply Side Policies for Addressing Climate Change	11.37
Tax expenditure measures	11.38
R&D expenditures and technology	11.46
Overview	11.49
Perverse subsidies	11.50
D. The Development of Renewable Energy	11.52
The Mandatory Renewable Energy Target Scheme	11.53
State initiatives	11.60
Overview	11.67
E. Demand Side Management Strategies	11.68
Greenhouse Challenge Plus programme	11.73
Other energy efficiency initiatives	11.82
F. Conclusion	11.87

Legal Limits

12. Green Taxes versus Economic Freedoms: An ECJ Case Law Approach

A. Introduction	12.01
B. Environmental Protection as a General Interest: Shaping its Characteristics	12.11
C. The Importance of Declaring the Aim of the Provision when Environmental Taxes are Established	12.17
D. Maintaining the Institutional Balance: The Legal Basis Must Always Correspond to the Content and Aim of the Act	12.19
E. A Further Requirement: Fiscal Instruments Must be Both Necessary and Proportional (Effective, Appropriate, Least Restrictive)	12.24
F. When the Effects May Exceed the Aims: State Aids and Tax Incentives	12.29
G. The Time Factor: State of the Art, Transitional Periods, and Taxes as Transitional Measures	12.41
H. Final Remarks	12.47

Psychological Dimensions

13. Reconsidering Crowding Out of Intrinsic Motivation from Financial Incentives: The Case of Conservation on Private Lands	
A. Introduction	13.01
B. Financial Incentives and Crowding Out: A Trojan Horse?	13.06
You can't lose what you never had: the role of <i>ex ante</i> motivation	13.07
High-cost actions and the practical significance of motivation	13.09
The lack of evidence for motivation spill-over effects	13.12
A comparative assessment: the limitations of regulation	13.17
C. Minimizing Crowding Out Effects	13.20
Rightsizing excessive financial incentives	13.21
The importance of framing feedback to emphasize achievement and autonomy	13.24
D. Conclusion	13.27

III NATIONAL CASE STUDIES

Transport

14. Assessment of Fiscal Measures on Atmospheric Pollution from Transport in Urban Areas	
A. Introduction	14.01
B. Econometric Estimation of the Transport Demand Model	14.05
Estimation of the household demand system	14.06
Estimation of the cost function of public transport providers	14.13
C. Simulations	14.17
Definition of the scenarios	14.18
Methodology	14.19
Results of the simulations	14.26
D. Conclusions	14.32
15. Motor Fuel Taxation and regional Development: Economic, Environmental, and Legal Aspects	
A. Introduction	15.01
B. Crafting an Appropriate Policy Response	15.09
C. Motor Fuel Taxation and Regional Development	15.17
D. Policy Simulations for New England	15.21

E. Projected Regional Impacts of Gas Tax Reform	15.27
F. Legal Dimensions of Gas Tax Reform	15.31
G. Conclusions	15.40
References	367
16. Regulatory and Related Policy Drivers and Barriers to Sustainable Innovation: Energy Sources in Vehicles	
A. Introduction	16.01
The rationale	16.02
The five principles	16.03
B. Technologies and Innovation: Energy Sources in Vehicles	16.08
Drivers for and barriers to sustainable innovation	16.09
Response strategies	16.19
Systems perspective and SI policy	16.28
C. Assessment of Selected Policy Instruments Affecting Technology Innovation for Energy Sources in Vehicles	16.42
Introduction	16.42
Assessment of the EU Batteries Directive	16.50
Key elements	16.55
Scope	16.56
Implementation activities for the current Directive	16.57
Criteria for assessing the impact of the Batteries Directive on sustainable innovation	16.58
Encouraging long-term thinking	16.58
Overcoming lock-in, niche development, and promoting technological diversity	16.60
Continuation of locked-in technologies	16.63
Niche development for new technologies and technological diversity	16.66
Promoting knowledge networks and a skills base	16.69
Criteria relating impacts of the Batteries Directive to the policy process	16.70
Making sustainable innovation an explicit goal of policy-making	16.70
Ensuring broad stakeholder participation	16.71
Developing a coherent and integrated mix of policy instruments	16.73
Incorporating ‘policy learning’	16.75
Assessment of the Voluntary Agreement within the EU strategy on CO ₂ emissions	16.76
Key elements	16.82

Scope	16.83
Implementation activities	16.84
Criteria assessing the impact of the Voluntary Agreement within the EU Strategy on CO ₂ emissions on sustainable innovation	16.85
Encouraging long-term thinking	16.85
Overcoming lock-in, niche development, and promoting technological diversity	16.86
Promoting knowledge networks and a skills base	16.91
Criteria relating to the impacts of the Voluntary Agreement within the EU Strategy on CO ₂ emissions on the policy process	16.93
Making sustainable innovation an explicit goal of policy-making	16.93
Ensuring broad stakeholder participation	16.94
Developing a coherent and integrated mix of policy instruments	16.95
Incorporating 'policy learning'	16.97
Assessment of car taxation as a fiscal measure within the EU strategy on CO ₂ emissions	16.98
Key elements	16.104
Scope	16.105
Implementation activities	16.106
Assessment of the impact of car taxation based on CO ₂ emissions on sustainable innovation	16.107
Encouraging long-term thinking	16.107
Overcoming lock-in, niche development, and promoting technological diversity	16.109
Promoting knowledge networks and a skills base	16.110
Criteria relating to the impact of car taxation on the policy process	16.111
Making sustainable innovation an explicit goal of policy making	16.111
Ensuring broad stakeholder participation	16.112
Developing a coherent and integrated mix of policy instruments	16.113
Incorporating 'policy learning'	16.114
D. Summary and Conclusions	16.115
17. Evaluation of Potential Changes in the Tax Treatment of Company Cars in Canada	
A. Introduction	17.01

B. Current Vehicle Policies in Canada and the Tax Treatment of Company Cars in Canada and the United Kingdom	17.07
Current passenger transport policy in Canada	17.07
Company car tax treatment in Canada	17.09
Company car tax treatment in the United Kingdom	17.14
C. Method	17.19
Description of proposed policy	17.19
Description of model	17.21
D. Results	17.26
Impacts of changes in company car tax treatment on CO ₂ and CAC emissions	17.26
Impacts of changes in company car tax treatment on vehicle and fuel purchases	17.28
Results for alternative policy specifications	17.30
Results from sensitivity analyses	17.32
E. Discussion and Conclusion	17.33

Energy

18. The Energy Regulation in Italy: Enhancing Sustainability

A. Introduction	18.01
B. The European and Italian Energy Sector: A Short Comparative Review	18.03
C. Support of Renewable Energy and the Green Certificates Market	18.07
From feed-in tariff to renewable portfolio standard	18.13
Other economic measures to support RES	18.29
D. Energy Efficiency Titles (White Certificates)	18.35
The creation of an energy efficiency title market: basic elements	18.38
The size of the target	18.38
Eligible projects	18.39
Issuing energy efficiency titles or white certificates	18.40
The financing mechanism: tariff regulation	18.41
Baselines and additionality	18.42
E. Emission Trading	18.44
F. Conclusions	18.56

19. New Zealand's Failed Attempt at a Carbon Tax—Fatally Flawed or Mismanaged?	
A. Introduction and Overview	19.01
B. Environmental Taxation Initiatives Generally	19.06
C. The Kyoto Protocol and New Zealand's Position	19.12
Background to the Kyoto Protocol	19.12
New Zealand's position regarding the Kyoto Protocol	19.13
D. The Carbon Tax Proposal and Public Submissions	19.14
New Zealand's carbon tax proposal in detail	19.14
Submissions on the proposal	19.27
E. Withdrawing the Carbon Tax and its Aftermath	19.35
The first signs of 'distress'—errors in methodology, calculations, and projections	19.35
Intervention of the 2005 General Election and later decision to withdraw the proposal	19.46
F. Discussion and Review—What Can We Learn?	19.52
G. Conclusions	19.60

Natural Resources

20. The Need to Shift Canadian Tax Incentives to Reduce the Impact of the Mineral Industry on the Environment and Local Communities	
A. Introduction and Summary	20.01
B. The Mining Footprint at All Stages of Mining	20.04
C. Depletion or Stewarding Our Mineral Resources for the Future	20.13
D. The Tax Regime for Mining in Canada	20.22
Layers of taxation paid by mining companies	20.23
Provincial governments and territorial governments	20.27
Federal expenses and deductions specific to the mining industry operating in Canada	20.29
Resource allowance	20.30
Canadian Exploration Expenses	20.31
Canadian Development Expenses	20.32
Flow-through shares	20.33
Investment tax credits for exploration	20.34
Deduction of Mine Reclamation Trust contributions	20.35
Tax planning considerations—the valuation allowance	20.36
The provincial mining tax regimes	20.38
Tax holidays	20.41

E. More Detail on ‘Super’ Flow-Through Shares	20.42
F. Costs to Communities and Eco-systems—Two Examples	20.46
G. The Need for Appropriate Data Gathering and Analysis	20.49
H. Recommendations—Shifting Incentives: Protecting Resources for Future Generations	20.56
21. Taxation and a Clean and Healthy Environment: A Case Study of the Mining of Titanium in Kenya	
A. Introduction	21.01
B. Environmental Taxation: The Polluter Pays Principle	21.15
Environmental tax components	21.17
Taxation theories that are applicable in mining and the environment	21.20
C. The Environmental Taxation of Mining in Kenya	21.27
Mining practices and the environment in Kenya	21.32
Legislation on mining, the environment, and taxation	21.37
The Mining Act	21.42
The Environmental Management Act and the National Environmental Management Authority	21.46
Environmental taxation in Kenya	21.52
Titanium Mining in Kwale	21.55
The Tiomin-commissioned EIA	21.61
The opposing Kenyatta University EIA	21.64
The economic benefits	21.70
D. Recommendations	21.75
E. Conclusion	21.79
Toxics and Waste	
22. An Analysis of the Effectiveness and the Side-effects of the German Wastewater Fee Law	
A. Introduction	22.01
B. The <i>Abwasserabgabengesetz</i>	22.04
Brief history and intended purpose	22.04
Statutory provisions	22.05
Relationship to the <i>Wasserhaushaltsgesetz</i>	22.07
Administration	22.08
Permitting and enforcement by the states	22.08
Self-determination of the maximum pollutant discharge	22.09
Calculation by the states	22.11

Exemptions	22.12
Use of the funds collected	22.13
C. Present Consequences of the Statute and its Implementation	22.15
No necessary relationship to the environment	22.15
Fee levels are now too low to have the desired 'steering effect'	22.16
Too few pollutants are covered	22.19
Failure to cover both concentration and quantity of pollutants	22.21
The 'annual maximum' approach provides no incentive to lower pollution at some times but not others	22.23
D. Political and Regulatory Side-effects	22.24
Negative effects	22.24
A licence to pollute, undermining public perceptions of legitimacy	22.24
State dependence on the fees	22.25
High costs to municipalities and industry in cases where no further reductions are feasible	22.26
Positive effects	22.27
May enhance public confidence in the 'polluter pays' principle	22.27
Major incentive towards enforcement of the command-and-control requirements of the WHG	22.28
E. Conclusions	22.30
Strong support for the truth of the saying that the 'devil is in the details'	22.30
Crucial importance of understanding the relationship to other regulatory requirements	22.31
Assessment of any fee or tax should look not only at the benefits, costs, and unintended adverse side-effects, but also unintended beneficial effects	22.32
Summary	22.33
23. Extra Strength Sewer Surcharges in Ontario: Do they really Reduce Contaminant Loadings?	
A. Introduction	23.01
B. Extra-strength Sewer Surcharge Programmes in Ontario	23.11
C. Charge Rates, Trends, and Formulae	23.17
D. Do Extra-strength Sewer Surcharges Induce Reductions in Contaminant Loadings?	23.29
E. Enhancing the Design of the Extra-strength Sewer Surcharge	23.57
F. Conclusions	23.60

24. Pesticide Reducing Instruments—An Interdisciplinary Analysis of Effectiveness and Optimality	
A. Introduction	24.01
B. Previous Research	24.05
C. The Model Framework	24.12
Agricultural Applied General Equilibrium of the Danish Economy (AAGE)	24.14
Econometric Sector Model for Evaluating Resource Application and Land use in Danish Agriculture (ESMERALDA)	24.20
Animal, Landscape and Man Simulation System (ALMaSS)	24.26
Geological/hydrological assessment	24.37
Economic valuation of biodiversity and groundwater	24.40
D. Three Policy Scenarios for Reducing Agricultural Pesticide Use	24.43
Definition of scenarios	24.44
Baseline scenario	24.44
Three pesticide reduction scenarios	24.48
Scenario results	24.53
Baseline scenario	24.53
Pesticide reduction scenarios	24.62
Costs and benefits of pesticide regulations	24.78
Determining the optimal level of regulation	24.85
E. Conclusion	24.87
References	596

Subsidies

25. Analysis of Energy-Related Subsidies in Austria	
A. Introduction	25.01
B. Energy-related Subsidies in Austria	25.12
Expenditures for energy-related research and development	25.15
Investment subsidies for company emission reduction measures	25.19
Tax relief for electricity, natural gas, coal, and mineral oil	25.21
Feed-in tariffs for electricity from renewable energies	25.28
C. Subsidies for Housing Construction	25.34
Empirical; analysis of private households' heating costs	25.37
D. Summary and Conclusions	25.44

26. Subsidy Impact Assessments and Subsidy Monitoring— Opportunities to Advance the Reform of Environmentally Harmful Subsidies in Germany	
A. Introduction	26.01
B. Definition and Identification	26.04
C. Subsidy Impact Assessments with Particular Focus on EHS:	
A Selective Overview	26.10
Energy subsidies in Germany	26.12
Subsidy monitoring	26.13
Subsidy impact assessments	26.19
Transport subsidies in Germany	26.24
Subsidy monitoring	26.26
Subsidy impact assessments	26.38
D. Linkages to Policy Reform	26.43
References	646
Municipal Level	
27. Tax Reform as if Sustainability Mattered: A Policy Analysis to Demonstrate the Viability of Environmental Tax Shifting in Vancouver’s Sustainability Precinct	
A. Introduction	27.01
B. Policy Alternatives for Development of the Precinct	27.05
Status quo	27.06
Environmental tax shifting	27.07
Government led initiatives	27.08
C. Policy Goals	27.09
D. Impacts on Automobile Use	27.10
Assumptions used to calculate the status quo	27.10
Impacts of each policy alternative	27.11
E. Impacts on Water Use	27.14
Assumptions used to calculate the status quo	27.14
Impacts of each policy alternative	27.15
F. Impacts on Stormwater Runoff	27.18
Assumptions used to calculate the status quo	27.18
Impacts of each policy alternative	27.19
G. Impacts on Carbon Dioxide Emissions	27.22
Assumptions used to calculate the status quo	27.22
Impacts of each policy alternative	27.23

H. Impacts on Solid Waste	27.26
Assumptions used to calculate the status quo	27.26
Impacts of each policy alternative	27.27
I. Analysis of Options by Criteria	27.30
J. Recommendation	27.35
28. Trading Greenbacks for Green Behaviour: Oregon's and the City of Portland's Environmental Incentives	
A. States' Use of Economic Instruments for Environmental Stewardship	28.03
B. Oregon's and Portland's Environmental Initiatives	28.04
Oregon	28.04
Oregon's energy policy	28.04
Tax incentives	28.06
Business tax credits	28.07
Residential tax credits	28.17
Oregon's other environmental incentives	28.22
Portland	28.23
Portland's energy policy	28.23
Incentives used by Portland to implement environmental changes	28.28
Energy contract	28.28
Retrofit and retiming of traffic signals	28.29
Fuel cell energy	28.30
Incentives offered by Portland to its citizens to achieve environmental goals	28.31
Portland General Electric Residential and Office of Sustainable Development (Green Investment Fund)	28.31
Portland Development Commission (Commercial and Residential)	28.32
Intergovernmental coordination	28.33
C. Environmental Justice: The Connection to Economic Instruments	28.34
Defining environmental justice	28.35
Do environmental tax incentives raise environmental justice concerns?	28.40
Conclusions	28.46

General

29. The Tragic Paradox: Germany's Very Successful But Not Very Popular Green Budget Reform: Lessons from Seven Years of Courageous Turnaround (1999 to 2005)	
A. Introduction: Current US Momentum is Helpful, but EU Experience Remains Vital	29.01
B. Eco-tax Reform Only Core Element in Germany's Much Wider Green Budget Reform	29.12
C. Some More Facts About What Germany Did	29.23
D. Environmental Effects: CO ₂ Emissions Decrease, New Technologies on the Up	29.29
E. Economic Effects Benefit Pensions and Labour and Refute Critics of the Eco-tax	29.34
F. The Political Balance Sheet of the Reform Package	29.42
30. Estonian Ecological Tax Reform Successfully Launched	
A. Introduction	30.01
B. Development of the Ecological Tax Reform	30.10
C. The Principles and Tools of the ETR	30.14
D. Successful Start of the ETR: Environmental Charges Act	30.23
E. First Results and Conclusions	30.30
31. Taxes and the Success of Non-Tax Market-Based Environmental Regulatory Regimes	
A. US Federal Income Tax Treatment of Conservation Easements	31.06
B. US Federal Income Tax Treatment of Tradable Emissions Allowances	31.22
C. Conclusion	31.47
32. Revenue Neutral Environmental Tax Reform—Case of the Czech Republic	
A. Introduction	32.01
Proposed ETR in the Czech Republic	32.04
Principles	32.05
Exemptions	32.07

Tax rates	32.08
Tax revenues and revenue recycling	32.10
B. Administrative Effectiveness of the Environmental Charges and Taxes	32.16
Charges and taxes from the perspective of administrative effectiveness	32.18
Administrative costs and assessment of the ETR	32.24
C. ETR and the Supply Side of the Labour Market	32.28
Concept and measurement of demotivations	32.29
The present situation in the Czech Republic	32.40
<i>Ex ante</i> evaluation of the impacts of compensation measures proposed by the ETR	32.46
D. Conclusion	32.57
References	780
33. The Limits to Self-Restraint and Eco-Efficiency, Proposed Application of Environmental Taxation in Japanese Environmental Policy	
A. The Focus of this Chapter	33.01
B. History, Characteristics, and Theoretical Interpretations of Japanese Environmental Policies	33.07
The 'limits to self-restraint and eco-efficiency' in the Japanese transport sector	33.12
'Inverse eco-efficiency' and 'total environmental resource inputs'	33.16
Severe deterioration of public transport	33.20
C. Current Efforts to Introduce an Environmental Tax in Japan	33.21
Proposals to introduce an environmental tax	33.24
The 2004 environmental tax plan	33.25
Basic planning	33.26
Tax reductions	33.27
Uses of revenue	33.28
The 2005 environmental tax plan	33.29
Key concepts	33.30
Objects and stages of taxation	33.32
Tax revenue and tax rate	33.33
Tax reduction	33.34
Use of tax revenue	33.35
Effects and impacts of the environmental tax	33.36
Suggested measures using the revenue	33.37
The 2006 environmental tax plan	33.38

Bigger tax reductions	33.39
Aims and focuses	33.40
Major opposition to and arguments against the environmental tax plan in Japan	33.41
Arguments against an environmental tax	33.42
Reasons for the environmental tax	33.43
D. Structural Problems in the Transport Sector and the Need for Reform in Public Infrastructure Investment	33.45
Diffused development in local core cities	33.47
Rapid growth in private car fleet size and fuel consumption	33.48
Substitution problem resulting from the lack of alternative transport	33.50
Structure of the Special Purpose Tax for Road Improvements	33.54
E. Concluding Remarks: Proposals to Improve the Effectiveness and Efficiency of the Planned Environmental Tax	33.57
Summary of the main points	33.57
Enhancing effectiveness and efficiency of the planned environmental tax reform	33.60

IV COMPARATIVE ANALYSIS

34. Marketing Market-Based Environmental Policy Instruments: The Case of the UK Climate Change Levy and the German Ecotax Reform	
A. Introduction	34.01
B. A Brief Description of the Two Taxes	34.04
The German ecological tax reform: the Ecotax	34.04
The Climate Change Levy	34.06
C. How the Two Instruments were Conceived and Received	34.09
The German Ecotax reform	34.09
The PETRAS project in Germany	34.16
Environmental awareness in Germany: the 2004 Survey	34.19
The Climate Change Levy	34.21
The PETRAS project in the United Kingdom	34.24
Conclusions: important contextual differences	34.26
D. Structural Explanations	34.27
Tax rates	34.27
Target groups	34.29
E. Stakeholder Involvement	34.32
Negotiating policy in the United Kingdom: carrots and sticks	34.34

F. Communication of Policy	34.39
Use of language	34.39
Conceptual issues	34.41
Other communication issues	34.47
G. Conclusions	34.48
35. Market-Based Policies for Renewable Energy Source Electricity: A Comparative Evaluation	
A. Introduction	35.01
B. Criteria for Comparison	35.06
Environmental effectiveness	35.07
Economic efficiency	35.09
Distributional fairness	35.14
Political feasibility	35.16
C. Policies to Foster Renewable Energy	35.20
Subsidies	35.23
Regulated prices	35.25
Regulated quantities	35.28
Taxes	35.31
D. Experience with Different Policies	35.33
Environmental effectiveness	35.34
Economic efficiency	35.41
Distributional fairness	35.46
Political feasibility	35.51
E. Conclusion	35.58
36. Climate Change Post-Kyoto: A Tax Policy Perspective	
A. Introduction	36.01
B. Developments in the United Kingdom Since 1997	36.03
C. Developments in Australia Since 1997	36.11
D. The Current Position in the United Kingdom	36.19
E. The Current Position in Australia	36.24
F. Post-Kyoto Tax Policy Considerations	36.31
G. Conclusions	36.39

37. Which Fiscal Instruments are Effective in Reducing Carbon Emissions from Road Transport? Australia's Greenhouse Measures and Tax Instruments Compared Internationally	
A. Transport Emissions	37.06
B. Growth of Emissions in the Transport Sector	37.10
C. Australian Government's environmental policy measures	37.15
D. Australian Government's greenhouse measures	37.17
Greenhouse measures: 'Environmental Strategy for the Motor Vehicle Industry'	37.19
Fuel Consumption Guide	37.20
Fuel Consumption Label	37.21
Commonwealth fleet target	37.22
Voluntary fuel consumption target	37.23
Evaluation of the voluntary fuel consumption target	37.25
Greenhouse gas abatement programme	37.28
Behavioural change to travel patterns	37.29
Government bio-fuels initiatives	37.32
Report by the Biofuels Taskforce	37.33
Alternative Fuels Conversion Program	37.38
State and Territory Action programme	37.42
Travel demand management	37.44
E. Taxation Instruments Used to Reduce Carbon Emissions	37.46
F. Distortionary Tax Incentives	37.50
Fringe Benefits Tax	37.51
Conflict between taxation policy and environmental policy objectives	37.55
Why not amend the Fringe Benefits Tax Law?	37.59
UK car tax reform	37.65
Taxation measures adopted in the United Kingdom	37.67
Calculation of the Car benefit	37.68
Taxable value	37.70
Impact on the choice of car	37.73
G. Fuel Taxation	37.75
Fuel tax credit subsidy	37.79
H. Taxation Measures Used to Encourage the Acquisition of Fuel-efficient Vehicles	37.84
Incentive to purchase four-wheel drives?	37.88
Other taxes, charges, and annual registration fees	37.90
EU treatment of other taxes and charges	37.94
European Union—annual registration (or circulation) tax	37.96
I. Conclusion	37.99

**V COMPLEMENTARY INSTRUMENTS AND
ALTERNATIVE APPLICATIONS**

38. Designing Forest Carbon Markets for Efficiency, Ecology, and Equity	
A. Background and Context	38.08
Why forests matter: carbon, critters, and communities	38.08
How a forest carbon market will affect forest management	38.20
How a forest carbon market could benefit biodiversity and aboriginal people: the Innu example	38.26
B. Designing Forest Carbon Markets to Provide Multiple Benefits	38.33
Climate change and economic benefits	38.34
Cap and trade versus offsets	38.39
Why are offset systems less effective?	38.45
Baselines	38.46
Leakage	38.50
The fundamental dilemma with offsets: an example	38.53
Should offset trading be used under Kyoto?	38.57
Conditions for offsets as a transitional step	38.59
Where the regulatory infrastructure to support cap and trade is not in place	38.60
Where there is significant resistance to cap and trade	38.61
Where 'learning by doing' is needed	38.62
Institutional design	38.64
Implications for CDM design	38.70
Biodiversity benefits	38.78
Requiring projects to achieve net benefits for biodiversity	38.80
Allowing avoided logging projects	38.82
Moving to cap and trade	38.83
Benefits for aboriginal people	38.85
Allocating carbon rights	38.88
Allowing avoided logging projects	38.90
Streamlined rules for smaller projects	38.92
C. Conclusions	38.94
39. Tax Strategies to Deal with an Environmental Disaster	
A. Introduction	39.01
B. Environmental Taxation and Post-disaster Relief	39.02
C. Hurricane Katrina	39.04

D. Environmental Tax Strategies Included in the Hurricane Tax Acts	39.06
Tax incentives to encourage voluntary redevelopment support	39.07
Tax incentives for businesses and investors to rebuild in the disaster areas	39.11
Tax incentives to encourage individuals to return to the disaster areas	39.14
Tax relief for hurricane victims	39.17
E. Summary and Conclusion	39.20
40. Targeting Financiers: Can Voluntary Codes of Conduct for the Investment and Financing Sectors Achieve Environmental and Sustainability Objectives?	
A. Introduction	40.01
B. Voluntary Codes of Corporate Conduct	40.05
C. Voluntary Codes in the Financing and Investment Sector	40.10
The Equator Principles	40.11
Principles for responsible investment	40.18
D. Finance and Investment Codes in Operation: Concerns, Controversy, and Implementation	40.21
Positive developments	40.23
Concerns and controversy	40.25
Baku-Tblisi-Ceyhan pipeline	40.28
Sakhalin II	40.32
E. Concluding Remarks	40.34
<i>Index</i>	963
