Construction and Bayesian Estimation of DSGE Models for the EURO Area

A Statistical Framework
Contents

1 Introduction 1
   1.1 Objective of the study ............................................. 1
   1.2 Summary of the chapters ............................................ 2

2 Bayesian estimation of DSGE models 5
   2.1 Literature review .................................................. 5
   2.2 Basic concepts of Bayesian analysis .............................. 6
   2.3 Estimation procedure: an overview ................................ 10
   2.4 DSGE framework .................................................. 10
      2.4.1 Model solutions ............................................. 10
      2.4.2 Setting up a state space framework .......................... 14
      2.4.3 Using the model ............................................. 16
   2.5 Prior distributions in DSGE model estimation .................. 17
   2.6 Computation of the data likelihood ............................... 17
      2.6.1 Problem of filtering and prediction ......................... 18
      2.6.2 Prediction, filtering and likelihood of linear Gaussian models .... 19
   2.7 Approximations of the posterior distribution ................... 21
      2.7.1 Posterior simulations ....................................... 22
      2.7.2 Numerical optimization of the posterior ..................... 28
   2.8 Model evaluation ................................................ 30
      2.8.1 Model-data fit ............................................. 31
      2.8.2 Robustness of the results and identification issues .......... 33

3 Sticky contracts or sticky information? Evidence from an estimated Euro area DSGE model 37
   3.1 Introduction ..................................................... 37
   3.2 Outline of the model ............................................. 40
      3.2.1 Households ................................................ 40
      3.2.2 Firms ..................................................... 41
      3.2.3 Market clearing, monetary policy and exogenous processes .... 42
   3.3 Staggered wage and price setting ................................ 43
      3.3.1 Calvo set up ............................................. 43
      3.3.2 Sticky information ....................................... 44
   3.4 Equilibrium and linearized equations ............................ 46
      3.4.1 Log-linearized versions of sticky information price and wage equations ... 47
   3.5 Empirical analysis .............................................. 48
      3.5.1 The data ................................................ 48
      3.5.2 Calibrated parameters and priors ............................. 49
   3.6 Results for the baseline model .................................. 50
      3.6.1 Empirical properties of the seminal closed-economy DSGE model ........ 50
C Derivation of wage and price equations
  C.1 The New-Keynesian Phillips Curve with a time varying markup 225
  C.2 Wage equation with a time varying markup 227
  C.3 The New-Keynesian Phillips curve in the presence of non-zero steady state inflation 230
  C.4 Wage equation in the presence of non-zero steady state inflation and the balanced growth 232

D Data description
  D.1 The area-wide model 239
  D.2 The two-region model 239
