Evaluating the effect of participation in subsidised employment

Christian L. GÖBEL

2007
## Contents

1 **Introduction**  
1.1 The estimation of causal effects of participation 5  
1.2 Introduction to the Recruitment Plan 6  
1.3 Research questions 12  
1.4 A first look at the database 15  
1.5 Connections between the chapters 22  
1.6 Key results 30  
1.7 Interpretation of the results 32  
1.8 How can the results guide employment policy? 37  
Bibliography 40  

2 **Subsidised employment - a fast track for integrating young unemployed workers into the labour market?** 43  
2.1 Introduction 43  
2.2 The Belgian “Recruitment Plan” 47  
2.3 Description of the data 50  
2.4 Econometric issues 54  
2.5 The effect of participation in the subsidised employment programme 63  
2.5.1 Key results of our estimation 63  
2.5.2 Simulation results 66  
2.5.3 Results for cross-effects 69  
2.6 Conclusion 70  
Bibliography 72  
Appendix 76  
A Individual contributions to the likelihood 76
3 The effect of temporary employment subsidies on employment duration 103

3.1 Introduction 103
3.2 The Belgian "Recruitment Plan" 107
3.3 Description of the database 109
3.4 Econometric Model 114
3.5 Estimation Results 121
3.6 Conclusion 126

Bibliography 128
Appendix 132
   A Individual contributions to the likelihood 132
   B Tables 135
   C Figures 151

4 The effect of participation in subsidised employment on labour market transitions 155

4.1 Introduction 155
4.2 Subsidised employment in Belgium 159
4.3 The empirical model 163
   4.3.1 Implementation of the grouped duration multivariate mixed proportional hazard model 165
   4.3.2 Identification of multivariate mixed proportional hazard models 168
4.4 Simulation of the effect of participation 170
4.5 Description of the database 172
4.6 The effects of subsidised employment 176
4.7 Conclusion 186

Bibliography 188
Appendix 192
   A Individual contributions to the likelihood 192
## CONTENTS

B Transition rates for the ninth quarter of programme participation ................................................................. 196
C Drawing continuous random durations ............................................................ 197
D Tables .................................................................................................................. 199
E Figures .................................................................................................................. 210

5 A rough guide to the database ..................................................................................... 217
5.1 Introduction ............................................................................................................ 217
5.2 Where does the administrative raw data come from? ............................................ 218
5.3 What kind of information is in the different databases? ........................................ 220
  5.3.1 1st data request .............................................................................................. 220
  5.3.2 2nd data request .............................................................................................. 221
  5.3.3 Introduction of additional information .............................................................. 222
  5.3.4 Overview: databases and variables of the raw data ......................................... 223
  5.3.5 Where are the raw databases stored? ................................................................. 225
5.4 Several issues when organising data ......................................................................... 226
5.5 Overview of the data cleaning process .................................................................... 228
  5.5.1 1st step: cleaning and reorganising of raw data ................................................. 228
  5.5.2 2nd step: creation of aggregate information ..................................................... 230
  5.5.3 Integration of the year 2001 and 2002 into the database .................................... 231
  5.5.4 3rd step: Preparation of the data set which has been used for the duration analysis for school-leavers in Belgium .............................................................. 233
5.6 Where to start a new project? .................................................................................. 236
5.7 Additional resources .............................................................................................. 237
5.8 End ....................................................................................................................... 239
Bibliography ............................................................................................................... 240
Appendix ..................................................................................................................... 241
A Tables ....................................................................................................................... 241

6 Conclusion .................................................................................................................. 253
6.1 Ideas for future research ....................................................................................... 253
