Data Mining and Market Intelligence for Optimal Marketing Returns

Susan Chiu
Domingo Tavella
Preface xi
Biographies xiii

1 Introduction 1
Strategic importance of metrics, marketing research and data mining in today's marketing world 3
The role of metrics 4
The role of research 4
The role of data mining 6
An effective eight-step process for incorporating metrics, research and data mining into marketing planning and execution
   Step 1: identifying key stakeholders and their business objectives 6
   Step 2: selecting appropriate metrics to measure marketing success 7
   Step 3: assessing the market opportunity 8
   Step 4: conducting competitive analysis 8
   Step 5: deriving optimal marketing spending and media mix 9
   Step 6: leveraging data mining for optimization and getting early buy-in and feedback from key stakeholders 9
   Step 7: tracking and comparison of metric goals and results 9
   Step 8: incorporating the learning into the next round of marketing planning 10
Integration of market intelligence and databases 10
Cultivating adoption of metrics, research and data mining in the corporate structure 11
   Identification of key required skills 12
   Creating an effective engagement process 14
   Promoting research and analytics 15

2 Marketing Spending Models and Optimization 19
Marketing spending model 21
   Static models 23
   Dynamic models 34
Marketing spending models and corporate finance 35
A framework for corporate performance marketing effort integration 36

3 Metrics Overview 39
Common metrics for measuring returns and investments 41
Measuring returns with return metrics 42
Measuring investment with investment metrics 42
Developing a formula for return on investment 43
Common ROI tracking challenges 44
Process for identifying appropriate metrics 45
Identification of the overall business objective 45
Understanding the impact of a marketing effort on target audience migration 46
Selection of appropriate marketing communication channels 49
Identification of appropriate return metrics by stage in the sales cycle 56
Differentiating return metrics from operational metrics 61

4 Multi-channel Campaign Performance Reporting and Optimization 63
Multi-channel campaign performance reporting 65
Multi-channel campaign performance optimization 67
Uncovering revenue-driving factors 71

5 Understanding the Market through Marketing Research 73
Market opportunities 75
Market size 75
Factors that impact market-opportunity dynamics 76
Market growth trends 80
Market share 80
Basis for market segmentation 81
Market segmentation by market size, market growth, and market share: case study one 82
Using market research and data mining for building a marketing plan 85
Marketing planning based on market segmentation and overall company goal: case study two 85
Target-audience segmentation 88
Target-audience attributes 88
Types of target-audience segmentation 89
Understanding route to market and competitive landscape
by market segment 91
Routes to market 91
Competitive landscape 93
Competitive analysis methods 95
Overview of marketing research 100
Syndicated research versus customized research 101
Primary data versus secondary data 105
Surveys 106
Panel studies 108
Focus groups 109
Sampling methods 109
Sample size 110
Research report and results presentation 112
Structure of a research report 112

6 Data and Statistics Overview 115
Data types 117
Overview of statistical concepts 117
Population, sample, and the central limit theorem 118
Random variables 118
Probability, probability mass, probability density, probability distribution, and expectation 118
Mean, median, mode, and range 120
Variance and standard deviation 120
Percentile, skewness, and kurtosis 121
Probability density functions 122
Independent and dependent variables 126
Covariance and correlation coefficient 126
Tests of significance 130
Experimental design 134

7 Introduction to Data Mining 137
Data mining overview 139
An effective step by step data mining thought process 141
Step one: identification of business objectives and goals 141
Step two: determination of the key focus business areas and metrics 142
Step three: translation of business issues into technical problems 142
Step four: selection of appropriate data mining techniques and software tools 143
Step five: identification of data sources 143
### Contents

<table>
<thead>
<tr>
<th>Step six: conduction of analysis</th>
