Game Theory

A Multi-Levelled Approach

Springer

Contents

1	Introduction	1
1.1	A Definition	1
1.2	Some History	1
1.3	Examples	3
1.3.1	Zero-Sum Games	3
1.3.2	Nonzero-Sum Games	5
1.3.3	Extensive Form Games	8
1.3.4	Cooperative Games	12
1.3.5	Bargaining Games	15
1.4	Cooperative vs. Noncooperative Game Theory	16
	Problems	16
 Part I Thinking Strategically		
2	Finite Two-Person Zero-Sum Games	21
2.1	Basic Definitions and Theory	21
2.2	Solving $2 \times n$ Games and $m \times 2$ Games	23
2.2.1	$2 \times n$ Games	24
2.2.2	$m \times 2$ Games	25
2.2.3	Strict Domination	27
	Problems	28
3	Finite Two-Person Games	31
3.1	Basic Definitions and Theory	31
3.2	Finding Nash Equilibria	33
3.2.1	Pure Nash Equilibria	33
3.2.2	2×2 Games	35
3.2.3	Strict Domination	36
	Problems	38

4	Finite Extensive Form Games	43
4.1	The Extensive Form	43
4.2	The Strategic Form	46
4.3	Backward Induction and Subgame Perfection	48
4.4	Perfect Bayesian Equilibrium	51
	Problems	53
5	Finite Games with Incomplete Information	59
5.1	Player Types	59
5.2	Static Games of Incomplete Information	60
5.3	Signaling Games	64
	Problems	67
6	Noncooperative Games: Extensions	73
6.1	General Framework: Strategic Games	73
6.2	Cournot Quantity Competition	74
6.2.1	Simple Version with Complete Information	74
6.2.2	Simple Version with Incomplete Information	77
6.3	Bertrand Price Competition	78
6.4	Stackelberg Equilibrium	80
6.5	Auctions	82
6.5.1	Complete Information	82
6.5.2	Incomplete Information	83
6.6	Mixed Strategies and Incomplete Information	84
6.7	Sequential Bargaining	86
6.7.1	Finite Horizon Bargaining	87
6.7.2	Infinite Horizon Bargaining	89
	Problems	91
7	Repeated Games	101
7.1	Subgame Perfect Equilibrium	101
7.1.1	The Prisoners' Dilemma	101
7.1.2	Some General Observations	105
7.2	Nash Equilibrium	106
7.2.1	An Example	107
7.2.2	A Folk Theorem for Nash Equilibrium	109
	Problems	109
8	An Introduction to Evolutionary Games	111
8.1	Symmetric Two-Player Games and Evolutionary Stable Strategies ..	111
8.2	Replicator Dynamics and Evolutionary Stability	114
8.3	Asymmetric Games	116
	Problems	118

9	Cooperative Games with Transferable Utility	121
9.1	Examples and Preliminaries	121
9.2	The Core	123
9.3	The Shapley Value	125
9.4	The Nucleolus	127
	Problems	129
10	Cooperative Game Theory Models	133
10.1	Bargaining Problems	133
10.1.1	The Nash Bargaining Solution	134
10.1.2	Relation with the Rubinstein Bargaining Procedure	137
10.2	Exchange Economies	138
10.3	Matching Problems	142
10.4	House Exchange	145
	Problems	146
11	Social Choice	151
11.1	Introduction and Preliminaries	152
11.1.1	An Example	152
11.1.2	Preliminaries	153
11.2	Arrow's Theorem	154
11.3	The Gibbard–Satterthwaite Theorem	157
	Problems	159
Part II Noncooperative Games		
12	Matrix Games	163
12.1	The Minimax Theorem	163
12.2	A Linear Programming Formulation	164
	Problems	166
13	Finite Games	169
13.1	Existence of Nash Equilibrium	169
13.2	Bimatrix Games	170
13.2.1	Pure and Mixed Strategies in Nash Equilibrium	171
13.2.2	Extension of the Graphical Method	173
13.2.3	A Mathematical Programming Approach	174
13.2.4	Matrix Games	176
13.2.5	The Game of Chess: Zermelo's Theorem	177
13.3	Iterated Dominance and Best Reply	177
13.4	Perfect Equilibrium	180
13.5	Proper Equilibrium	184
13.6	Strictly Perfect Equilibrium	185
13.7	Correlated Equilibrium	186
13.8	A Characterization of Nash Equilibrium	189
	Problems	191

14	Extensive Form Games	197
14.1	Extensive Form Structures and Games	197
14.2	Pure, Mixed and Behavioral Strategies	199
14.3	Nash Equilibrium and Refinements	202
14.3.1	Subgame Perfect Equilibrium	204
14.3.2	Perfect Bayesian and Sequential Equilibrium	204
	Problems	209
15	Evolutionary Games	213
15.1	Symmetric Two-Player Games	213
15.1.1	Symmetric 2×2 Games	214
15.2	Evolutionary Stability	214
15.2.1	Evolutionary Stable Strategies	214
15.2.2	The Structure of the Set $ESS(A)$	215
15.2.3	Relations with Other Refinements	215
15.2.4	Other Characterizations of ESS	216
15.3	Replicator Dynamics and ESS	218
15.3.1	Replicator Dynamics	218
15.3.2	Symmetric 2×2 Games	219
15.3.3	Dominated Strategies	220
15.3.4	Nash Equilibrium Strategies	220
15.3.5	Perfect Equilibrium Strategies	222
	Problems	223

Part III Cooperative Games

16	TU-Games: Domination, Stable Sets, and the Core	229
16.1	Imputations and Domination	229
16.2	The Core and the Domination-Core	231
16.3	Simple Games	232
16.4	Stable Sets	234
16.5	Balanced Games and the Core	235
	Problems	237
17	The Shapley Value	241
17.1	Definition and Shapley's Characterization	241
17.2	Other Characterizations	246
17.2.1	Dividends	246
17.2.2	Strong Monotonicity	247
17.2.3	Multilinear Extension	248
17.3	Potential and Reduced Game	250
17.3.1	The Potential Approach to the Shapley Value	250
17.3.2	Reduced Games	253
	Problems	257

18 Core, Shapley Value, and Weber Set	259
18.1 The Weber Set	259
18.2 Convex Games	261
18.3 Random Order Values	262
18.4 Weighted Shapley Values	266
Problems	268
19 The Nucleolus	271
19.1 An Example	271
19.2 The Lexicographic Order	272
19.3 The (Pre-)Nucleolus	273
19.4 The Kohlberg Criterion	275
19.5 Computation of the Nucleolus	277
19.6 A Characterization of the Pre-Nucleolus	280
Problems	282
20 Special Transferable Utility Games	285
20.1 Assignment and Permutation Games	285
20.2 Flow Games	289
20.3 Voting Games: The Banzhaf Value	291
Problems	294
21 Bargaining Problems	297
21.1 The Bargaining Problem	297
21.2 The Raiffa–Kalai–Smorodinsky Solution	299
21.3 The Egalitarian Solution	300
21.4 Noncooperative Bargaining	302
21.5 Games with Non-Transferable Utility	303
Problems	304
Part IV Tools	
22 Tools	309
22.1 Some Definitions	309
22.2 A Separation Theorem	310
22.3 Lemmas of the Alternative	310
22.4 The Duality Theorem of Linear Programming	312
22.5 Some Fixed Point Theorems	313
22.6 The Birkhoff–von Neumann Theorem	314
22.7 The Max-Flow Min-Cut Theorem	316
Problems	319
Hints, Answers and Solutions	321
References	357
Index	363
