PART I: MACROECONOMIC FORECASTING 1

CHAPTER 1 FORECASTING ANNUAL UK INFLATION USING AN ECONOMETRIC MODEL OVER 1875–1991 3

Michael P. Clements and David F. Hendry

1 Introduction 3
2 Aspects of a general theory of forecasting 7
  2.1 Structural breaks 8
  2.2 Robustifying forecasts against structural breaks 9
  2.3 Other implications 12
3 The model of UK inflation 14
  3.1 The data series 14
  3.2 Feedback relations 15
  3.3 The selected model 16
4 Individual forecasting methods 17
  4.1 1982–1991 18
  4.2 Combined forecasting methods 22
5 Summary comparisons 24
  5.1 "Forecasting" 1982–1991 25
  5.2 "Forecasting" 1972–1981 27
6 Policy implications 28
7 Conclusions 29
Acknowledgments 30
Appendix A: Data definitions 30
### Contents

Appendix B: Model estimates 32  
Lagged variants of the selected full-sample model 32  
\emph{PcGets} forecasting models 32  
References 33

#### CHAPTER 2  FORECASTING UK INFLATION:  
THE ROLES OF STRUCTURAL BREAKS  
AND TIME DISAGGREGATION 41

\textit{Jennifer L. Castle and David F. Hendry}

1. Introduction 41  
2. Quarterly models of UK inflation 43  
   2.1 Data 44  
   2.2 Single-equation equilibrium-correction models 47  
   2.3 Vector equilibrium-correction models 49  
3. Quarterly forecasting models 51  
   3.1 Direct versus iterated forecasts 54  
   3.2 Forecast evaluation criteria 55  
4. Quarterly inflation forecasts 56  
   4.1 Forecasting results 57  
   4.2 Ranking of forecasting models 64  
5. Forecasting annual inflation 65  
   5.1 Disaggregating forecasts over time 67  
   5.2 DDD taxonomy 74  
6. Annual forecasting models 76  
   6.1 Models of annual inflation 77  
   6.2 Quarterly model of annual inflation 78  
   6.3 Quarterly inflation model used to forecast 1-year-ahead inflation 79  
7. Annual inflation forecasts 80  
8. Conclusions 83  
   Acknowledgements 84  
   Appendix A 84  
   A.1 Automatic \emph{Gets} selection 84  
   A.2 Forecasting models 86  
   References 89

#### CHAPTER 3  FORECASTING WITH SMALL  
MACROECONOMIC VARS IN  
THE PRESENCE OF INSTABILITIES 93

\textit{Todd E. Clark and Michael W. McCracken}

1. Introduction 93  
2. Methods used 95

CHAPTER 6  FORECASTING PERSISTENT DATA
WITH POSSIBLE STRUCTURAL BREAKS:
OLD SCHOOL AND NEW SCHOOL LESSONS
USING OECD UNEMPLOYMENT RATES

Walter Enders and Ruxandra Prodan

6 Concluding remarks 227
Acknowledgments 228
References 228

CHAPTER 7  WHAT CAN WE LEARN FROM
COMPREHENSIVE DATA REVISIONS
FOR FORECASTING INFLATION?
SOME US EVIDENCE

Pierre L. Siklos

1 Introduction 231
2 Forecasting with structural breaks 232
3 Time-series properties of the unemployment rates 237
4 Specifics of the estimated models 243
   4.1 “Old School” models 243
   4.2 “New School” models 244
   4.3 Nonlinear models: TAR and M-TAR 246
5 Comparative performance of the models 247
   5.1 Forecast performance of the models with an expanding window 248
   5.2 New School methods using only post-break data 250
   5.3 Forecasting performance of the TAR and M-TAR models 251
   5.4 Forecasting performance with intercept corrections 252
   5.5 Encompassing: combining Old School and New School models 254
6 Conclusion 256
Appendix A 257

PART II: FINANCIAL FORECASTING

CHAPTER 8 ESTIMATING AND FORECASTING GARCH MODELS IN THE PRESENCE OF STRUCTURAL BREAKS AND REGIME SWITCHES

Eric Hillebrand and Marcelo C. Medeiros

1 Introduction 303
2 The statistical consequences of neglecting parameter changes 305
3 The flexible coefficient GARCH(1, 1) model 309
  3.1 Overview 309
  3.2 Parameter estimation 312
  3.3 Determining the number of regimes 313
4 Forecast comparison of locally stationary GARCH(1, 1) vs. FCGARCH(M) models 316
  4.1 Data 316
  4.2 Local GARCH(1, 1) models 317
  4.3 FCGARCH(1, 1) models 317
  4.4 Forecast comparison 321
5 Conclusion 324
References 324

CHAPTER 9 A SOURCE OF LONG MEMORY IN VOLATILITY

Namwon Hyung, Ser-Huang Poon and Clive W.J. Granger

1 Introduction 329
2 How much volatility memory is there? 332
3 Long-memory volatility models 336
  3.1 FI(E)GARCH models 336
  3.2 Breaks and structural change 338
  3.3 Volatility regime-switching model 339
4 Empirical study 340
  4.1 Short-memory models 341
  4.2 Estimation 342
  4.3 Out-of-sample forecasts 344
  4.4 Forecast evaluation 350
  4.5 Results 351
5 The case for volatility breaks 363
  5.1 Economic significance 363
  5.2 International evidence 366
  5.3 Causes of volatility breaks 369
  5.4 Distinguishing breaks and jumps 372
6 Conclusion 373
CHAPTER 10  FORECASTING STOCK RETURN VOLATILITY IN THE PRESENCE OF STRUCTURAL BREAKS  
David E. Rapach, Jack K. Strauss and Mark E. Wohar

1 Introduction 381
2 Econometric methodology 385
   2.1 Modified iterative cumulative sum of squares algorithm 385
   2.2 GJR-GARCH model 386
   2.3 In-sample tests 387
   2.4 Forecasting models 388
   2.5 Combination forecasts 390
   2.6 Forecast evaluation 392
3 Empirical results 393
   3.1 Data 393
   3.2 In-sample results 395
   3.3 Out-of-sample results 402
4 Conclusion 412
Acknowledgments 413
References 414

CHAPTER 11  FINANCIAL TIME SERIES AND VOLATILITY PREDICTION USING NOVAS TRANSFORMATIONS  
Dimitris N. Politis and Dimitrios D. Thomakos

1 Introduction 417
2 NoVaS transformation and implied distributions 419
3 NoVaS distributional matching 425
   3.1 Parametrization 425
   3.2 Objective functions for optimization 427
4 NoVaS forecasting 430
5 Empirical examples 432
   5.1 Data, data-generating processes, and summary statistics 432
   5.2 NoVaS optimization and forecasting specifications 434
   5.3 Discussion of results 438
6 Concluding remarks 444
Acknowledgments 445
References 446
# CHAPTER 12 MODELING FOREIGN EXCHANGE RATES WITH JUMPS

*John M. Maheu and Thomas H. McCurdy*

1 Introduction 449
2 Basic jump model 452
   2.1 Heterogeneous jump parameterization 452
3 Benchmark specifications 453
   3.1 SV model 453
   3.2 GARCH model 454
4 Posterior inference 454
5 Model comparison 455
   5.1 Calculations 457
6 Volatility forecasts 459
   6.1 Calculations 459
7 Data 460
8 Results 461
9 Conclusions 468
   Acknowledgements 468
   Appendix A 469
   A.1 Jump model 469
   A.2 SV model 471
   A.3 GARCH model 472
References 472

# CHAPTER 13 BAGGING BINARY AND QUANTILE PREDICTORS FOR TIME SERIES: FURTHER ISSUES

*Tae-Hwy Lee and Yang Yang*

1 Introduction 478
2 What is bagging? 480
3 Bagging with different averaging schemes 482
4 Bagging multi-step quantile forecasts 497
5 Bagging quantile forecasts with different tick losses 516
6 Bagging quantile forecasts with different estimation algorithms 519
7 Bagging quantile forecasts with different quantile regression models 521
8 Bagging binary and quantile forecasts in different frequencies 526
9 Pretesting and bagging 526
10 Summary and conclusion 530
   Acknowledgements 532
   References 532
CHAPTER 14  FORECASTING INTEREST RATES:
AN APPLICATION OF THE STOCHASTIC
UNIT ROOT AND STOCHASTIC
COINTEGRATION FRAMEWORKS  535

Robert Sollis

1 Introduction  535
2 Stochastic unit roots, heteroscedastic integration and stochastic
cointegration  538
  2.1 Stochastic unit roots  538
  2.2 Testing for a STUR  541
  2.3 Heteroscedastic integration, stochastic cointegration and
    heteroscedastic cointegration  542
3 Data, unit root tests and STUR results  546
  3.1 Data  546
  3.2 Unit root test results  546
  3.3 Estimated STUR models and forecasts  548
4 HI, SC and HC test results  552
5 SC forecasting results  554
6 Conclusions  555
References  557

CHAPTER 15  BAYESIAN MODEL AVERAGING IN THE
PRESENCE OF STRUCTURAL BREAKS  561

Francesco Ravazzolo, Richard Paap, Dick van Dijk
and Philip Hans Franses

1 Introduction  561
2 Methodology  563
  2.1 The model  563
  2.2 Prior specification and posterior simulation  565
  2.3 Using the posterior results  567
3 Model uncertainty and structural breaks in return forecasting
models for the S&P 500  569
  3.1 Data  569
  3.2 Prior specification  570
  3.3 Full-sample estimation results  570
4 Active investment strategies allowing for model uncertainty and
structural breaks  579
  4.1 A utility-based performance measure  579
  4.2 Empirical results  582
5 Conclusion  590
Acknowledgements  592
References  592
CHAPTER 16  THE ECONOMIC AND STATISTICAL VALUE OF FORECAST COMBINATIONS UNDER REGIME SWITCHING: AN APPLICATION TO PREDICTABLE US RETURNS  Massimo Guidolin and Carrie Fangzhou Na
