General Introduction and Outline of the Dissertation .......... 1

Part I Gradual Wage-Price Adjustments and Monetary Policy in Closed Economies and Monetary Unions 5

1. Inflation Rate Differentials and Business Cycles Fluctuations in the Euro Area ........................................ 7
  1.1 Introduction .................................................... 7
  1.2 Inflation Differentials within Monetary Unions: Main Causes and Consequences ....................................... 8
  1.3 Inflation Differentials in EMU: Convergence and Stationarity Analysis ................................................. 15
  1.4 Structural Analysis of Inflation Differentials and Business Cycles Fluctuations in the EMU .......................... 29
  1.5 Concluding Remarks ........................................... 39

2. Gradual Wage-Price Adjustments and Keynesian Macrodynamics: Theoretical Formulation and Cross-Country Evidence 41
  2.1 Introduction .................................................... 41
  2.2 A Baseline Semi-Structural Macromodel ......................... 43
  2.3 4D Feedback-Guided Stability Analysis .......................... 51
## Contents

2.4 Econometric Analysis ................................................. 55
2.5 Eigen-Value Stability Analysis ...................................... 67
2.6 Concluding Remarks .................................................. 69

3.1 Introduction .......................................................... 73
3.2 Overview of the Literature .......................................... 75
3.3 The Model ............................................................. 79
3.4 Dynamic Adjustments under Different Labor Market Schemes ................................................................. 99
3.5 Output Stabilization and Monetary Policy Rules ..................... 101
3.6 Concluding Remarks .................................................. 105

4. Optimal Monetary Policy in Currency Unions with Asymmetric National Labor Markets .................................................. 107
4.1 Introduction .......................................................... 107
4.2 Preliminary Considerations .......................................... 109
4.3 The Model ............................................................. 111
4.4 Inflation Targeting in Monetary Unions ........................................ 123
4.5 Concluding Remarks .................................................. 135

Part II Gradual Wage-Price Adjustments and Exchange Rate Fluctuations in Open Economies ................................................... 137

5. Heterogenous Expectations, FX Fluctuations and Macroeconomic Stability ................................................................. 139
5.1 Introduction .......................................................... 139
5.2 The Baseline Open-Economy Framework ............................. 140
