About the Author xv
Preface xvi
Introduction xvii

Chapter 1
Strategy and Competition 1

1.1 Manufacturing Matters 5

1.2 A Framework for Operations Strategy 7

1.3 The Classical View of Operations Strategy 9

1.4 Competing in the Global Marketplace 14

1.5 Strategic Initiatives: Reengineering the Business Process 18

1.6 Strategic Initiatives: Just-in-Time 21

1.7 Strategic Initiatives: Time-Based Competition 23

1.8 Strategic Initiatives: Competing on Quality 24

1.9 Matching Process and Product Life Cycles 27

1.10 Learning and Experience Curves 31

1.11 Capacity Growth Planning: A Long-Term Strategic Problem 38

1.12 Summary 47

Additional Problems for Chapter 1 48

Appendix 1–A Present Worth Calculations 50
Bibliography 51

Chapter 2
Forecasting 52

2.1 The Time Horizon in Forecasting 55

2.2 Characteristics of Forecasts 56

2.3 Subjective Forecasting Methods 56

2.4 Objective Forecasting Methods 57

2.5 Notation Conventions 61

2.6 Evaluating Forecasts 61

2.7 Methods for Forecasting Stationary Series 64

2.8 Trend-Based Methods 75

Regression Analysis 75

More Problems for Section 2.8 78
Chapter 3
Aggregate Planning 124

Chapter Overview 124
3.1 Aggregate Units of Production 127
3.2 Overview of the Aggregate Planning Problem 128
3.3 Costs in Aggregate Planning 130
   Problems for Sections 3.1–3.3 132
3.4 A Prototype Problem 133
   Evaluation of a Chase Strategy
   (Zero Inventory Plan) 135
   Evaluation of the Constant Workforce Plan 136
   Mixed Strategies and Additional Constraints 138
   Problems for Section 3.4 139
3.5 Solution of Aggregate Planning Problems by Linear Programming 141
   Cost Parameters and Given Information 141
   Problem Variables 142
   Problem Constraints 142
   Rounding the Variables 143
   Extensions 144
   Other Solution Methods 146
3.6 Solving Aggregate Planning Problems by Linear Programming: An Example 147
   Problems for Sections 3.5 and 3.6 149
3.7 The Linear Decision Rule 152
3.8 Modeling Management Behavior 153
   Problems for Sections 3.7 and 3.8 155
3.9 Disaggregating Aggregate Plans 155
   Snapshot Application: Welch's Uses Aggregate Planning for Production Scheduling 157
   Problems for Section 3.9 158
3.10 Production Planning on a Global Scale 158
3.11 Practical Considerations 159
3.12 Historical Notes 160
3.13 Summary 161
   Additional Problems on Aggregate Planning 162

Appendix 3–A Glossary of Notation for Chapter 3 167
Bibliography 168

Supplement 1 Linear Programming 169
S1.1 Introduction 169
S1.2 A Prototype Linear Programming Problem 169
S1.3 Statement of the General Problem 171
   Definitions of Commonly Used Terms 172
   Features of Linear Programs 173
S1.4 Solving Linear Programming Problems
Graphically 174
  Graphing Linear Inequalities 174
  Graphing the Feasible Region 176
  Finding the Optimal Solution 177
  Identifying the Optimal Solution Directly
by Graphical Means 179
S1.5 The Simplex Method: An Overview 180
S1.6 Solving Linear Programming Problems
with Excel 181
  Entering Large Problems Efficiently 185
S1.7 Interpreting the Sensitivity Report: 187
  Shadow Prices 187
  Objective Function Coefficients and Right-
  Hand Sides 188
  Adding a New Variable 188
  Using Sensitivity Analysis 189
S1.8 Recognizing Special Problems 191
  Unbounded Solutions 191
  Empty Feasible Region 192
  Degeneracy 194
  Multiple Optimal Solutions 194
  Redundant Constraints 194
S1.9 The Application of Linear Programming
to Production and Operations Analysis 195
Bibliography 197

Chapter 4
Inventory Control Subject to Known
Demand 198

Chapter Overview 198
4.1 Types of Inventories 201
4.2 Motivation for Holding Inventories 202
4.3 Characteristics of Inventory Systems 203
4.4 Relevant Costs 204
  Holding Cost 204
  Order Cost 206
  Penalty Cost 207
  Problems for Sections 4.1–4.4 208
4.5 The EOQ Model 210
  The Basic Model 210
  Inclusion of Order Lead Time 213
  Sensitivity 214
  EOQ and JIT 215
  Problems for Section 4.5 216
4.6 Extension to a Finite Production Rate 218
  Problems for Section 4.6 219
4.7 Quantity Discount Models 220
  Optimal Policy for All-Units Discount Schedule 221
Summary of the Solution Technique for
All-Units Discounts 223
Incremental Quantity Discounts 223
Summary of the Solution Technique
for Incremental Discounts 225
Other Discount Schedules 225
Problems for Section 4.7 226

*4.8 Resource-Constrained Multiple
Product Systems 227
  Problems for Section 4.8 230
4.9 EOQ Models for Production Planning 230
  Problems for Section 4.9 234
4.10 Power-of-Two Policies 235
4.11 Historical Notes and Additional Topics 237
  Snapshot Application: Mervyn’s Recognized
  for State-of-the-Art Inventory
  Control System 238
4.12 Summary 239
  Additional Problems on Deterministic
  Inventory Models 240

Appendix 4–A Mathematical Derivations for
  Multiproduct Constrained EOQ Systems 244
Appendix 4–B Glossary of Notation for
  Chapter 4 246
Bibliography 246

Chapter 5
Inventory Control Subject to Uncertain
Demand 248

Chapter Overview 248
  Overview of Models Treated in This
  Chapter 252
5.1 The Nature of Randomness 253
5.2 Optimization Criterion 255
  Problems for Sections 5.1 and 5.2 256
5.3 The Newsboy Model 257
  Notation 257
  Development of the Cost Function 258
  Determining the Optimal Policy 259
  Optimal Policy for Discrete Demand 261
  Extension to Include Starting Inventory 261
  Snapshot Application: Using Inventory
  Models to Manage the Seed-Corn Supply
  Chain at Syngenta 262
  Extension to Multiple Planning Periods 263
  Problems for Section 5.3 264
5.4 Lot Size–Reorder Point Systems 266
  Describing Demand 267
  Decision Variables 267
6.10 Designing the Supply Chain in a Global Environment 355
   Snapshot Application: Norwegian Company Implements Decision Support System to Streamline Its Supply Chain 356
   Snapshot Application: Timken Battles Imports with Bundling 358
   Supply Chain Management in a Global Environment 359
   Snapshot Application: Digital Equipment Corporation Uses Mathematical Modeling to Plan Its Global Supply Chain 360
   Trends in Offshore Outsourcing 360
   Problems for Section 6.10 361

6.11 Summary 362
Bibliography 362

Chapter 7
Push and Pull Production Control Systems: MRP and JIT 364

Chapter Overview 364
   MRP Basics 367
   JIT Basics 369

7.1 The Explosion Calculus 370
   Problems for Section 7.1 374

7.2 Alternative Lot-Sizing Schemes 376
   EOQ Lot Sizing 376
   The Silver-Meal Heuristic 377
   Least Unit Cost 378
   Part Period Balancing 379
   Problems for Section 7.2 380

7.3 Incorporating Lot-Sizing Algorithms into the Explosion Calculus 382
   Problems for Section 7.3 383

7.4 Lot Sizing with Capacity Constraints 384
   Problems for Section 7.4 387

7.5 Shortcomings of MRP 388
   Uncertainty 388
   Capacity Planning 389
   Rolling Horizons and System Nervousness 390
   Additional Considerations 392
   Snapshot Application: Raymond Corporation Builds World-Class Manufacturing with MRP II 393
   Problems for Section 7.5 394

7.6 JIT Fundamentals 395
   The Mechanics of Kanban 395
   Single Minute Exchange of Dies 397
   Advantages and Disadvantages of the Just-in-Time Philosophy 398

Implementation of JIT in the United States 401
   Problems for Section 7.6 402

7.7 A Comparison of MRP and JIT 403

7.8 JIT or Lean Production? 404

7.9 Historical Notes 405

7.10 Summary 406
   Additional Problems for Chapter 7 407

Appendix 7–A Optimal Lot Sizing for Time-Varying Demand 411

Appendix 7–B Glossary of Notation for Chapter 7 415

Bibliography 416

Chapter 8
Operations Scheduling 417

Chapter Overview 417

8.1 Production Scheduling and the Hierarchy of Production Decisions 420

8.2 Important Characteristics of Job Shop Scheduling Problems 422
   Objectives of Job Shop Management 422

8.3 Job Shop Scheduling Terminology 423

8.4 A Comparison of Specific Sequencing Rules 425
   First-Come, First-Served 425
   Shortest Processing Time 426
   Earliest Due Date 426
   Critical Ratio Scheduling 427

8.5 Objectives in Job Shop Management: An Example 428
   Problems for Sections 8.1–8.5 429

8.6 An Introduction to Sequencing Theory for a Single Machine 430
   Shortest-Processing-Time Scheduling 431
   Earliest-Due-Date Scheduling 432
   Minimizing the Number of Tardy Jobs 432
   Precedence Constraints: Lawler's Algorithm 433
   Snapshot Application: Millions Saved with Scheduling System for Fractional Aircraft Operators 435
   Problems for Section 8.6 435

8.7 Sequencing Algorithms for Multiple Machines 437
   Scheduling n Jobs on Two Machines 438
   Extension to Three Machines 439
   The Two-Job Flow Shop Problem 441
   Problems for Section 8.7 444

8.8 Stochastic Scheduling: Static Analysis 445
   Single Machine 445
   Multiple Machines 446
Chapter 8
8.9 Stochastic Scheduling: Dynamic Analysis 449
   Selection Disciplines Independent of Job Processing Times 451
   Selection Disciplines Dependent on Job Processing Times 452
   The cμ Rule 454
   Problems for Section 8.9 454

8.10 Assembly Line Balancing 455
    Problems for Section 8.10 459
    Snapshot Application: Manufacturing Divisions Realize Savings with Scheduling Software 461

8.11 Simulation: A Valuable Scheduling Tool 462

8.12 Post-MRP Production Scheduling Software 463

8.13 Historical Notes 463

8.14 Summary 464
    Additional Problems on Scheduling 465

Bibliography 471

Supplement 2 Queuing Theory 473

S2.1 Introduction 473
S2.2 Structural Aspects of Queuing Models 474
S2.3 Notation 475
S2.4 Little's Formula 476
S2.5 The Exponential and Poisson Distributions in Queuing 476
   Aside 477
S2.6 Birth and Death Analysis for the M/M/1 Queue 478
S2.7 Calculation of the Expected System Measures for the M/M/1 Queue 481
S2.8 The Waiting Time Distribution 482
S2.9 Solution of the General Case 484
S2.10 Multiple Servers in Parallel: The M/M/c Queue 485
S2.11 The M/M/1 Queue with a Finite Capacity 489
S2.12 Results for Nonexponential Service Distributions 492
S2.13 The M/G/∞ Queue 493
S2.14 Optimization of Queuing Systems 495
    Typical Service System Design Problems 495
    Modeling Framework 495
S2.15 Simulation of Queuing Systems 498

Bibliography 499

Chapter 9
9.1 Representing a Project as a Network 503
9.2 Critical Path Analysis 505
    Finding the Critical Path 508
    Problems for Sections 9.1 and 9.2 511
9.3 Time Gosting Methods 513
    Problems for Section 9.3 517
9.4 Solving Critical Path Problems with Linear Programming 518
    Linear Programming Formulation of the Cost–Time Problem 521
    Problems for Section 9.4 523
9.5 PERT: Project Evaluation and Review Technique 523
    Path Independence 528
    Problems for Section 9.5 531
    Snapshot Application: Warner Robins Streamlines Aircraft Maintenance with CCPM Project Management 533
9.6 Resource Considerations 533
    Resource Constraints for Single-Project Scheduling 533
    Resource Constraints for Multiproject Scheduling 535
    Resource Loading Profiles 536
    Problems for Section 9.6 538
9.7 Organizational Issues in Project Management 540
9.8 Historical Notes 541
9.9 Project Management Software for the PC 542
    Snapshot Application: Project Management Helps United Stay on Schedule 543
    Snapshot Application: Thomas Brothers Plans Staffing with Project Management Software 543
    Snapshot Application: Florida Power and Light Takes Project Management Seriously 543
9.10 Summary 544
    Additional Problems on Project Scheduling 545

Appendix 9–A Glossary of Notation for Chapter 9 548

Bibliography 549
Chapter 10

Facilities Layout and Location  550

Chapter Overview  550
   Snap Shot Application: Sun Microsystems
   Pioneers New Flex Office System  553

10.1 The Facilities Layout Problem  554

10.2 Patterns of Flow  555
   Activity Relationship Chart  555
   From-To Chart  557

10.3 Types of Layouts  559
   Fixed Position Layouts  559
   Product Layouts  559
   Process Layouts  560
   Layouts Based on Group Technology  560
   Problems for Sections 10.1–10.3  562

10.4 A Prototype Layout Problem
   and the Assignment Model  564
   The Assignment Algorithm  565
   Problems for Section 10.4  567

*10.5 More Advanced Mathematical Programming
   Formulations  568
   Problem for Section 10.5  569

10.6 Computerized Layout Techniques  569
   CRAFT  570
   COFAD  574
   ALDEP  575
   CORELAP  576
   PLANET  577
   Computerized Methods versus Human Planners  577
   Dynamic Plant Layouts  578
   Other Computer Methods  578
   Problems for Section 10.6  579

10.7 Flexible Manufacturing Systems  582
   Advantages of Flexible Manufacturing Systems  584
   Disadvantages of Flexible Manufacturing Systems  584
   Decision Making and Modeling of the FMS  585
   The Future of FMS  588
   Problems for Section 10.7  590

10.8 Locating New Facilities  590
   Snap Shot Application: Kraft Foods Uses Optimization and Simulation to Determine Best Layout  591
   Measures of Distance  592
   Problems for Section 10.8  593

10.9 The Single-Facility Rectilinear Distance Location Problem  593
   Contour Lines  596
   Minimax Problems  597
   Problems for Section 10.9  600

10.10 Euclidean Distance Problems  601
   The Gravity Problem  601
   The Straight-Line Distance Problem  602
   Problems for Section 10.10  603

10.11 Other Location Models  604
   Locating Multiple Facilities  605
   Further Extensions  606
   Problems for Section 10.11  608

10.12 Historical Notes  609

10.13 Summary  610
   Additional Problems on Layout and Location  611
   Spreadsheet Problems for Chapter 10  616

Appendix 10–A Finding Centroids  617
Appendix 10–B Computing Contour Lines  619

Bibliography  622

Chapter 11

Quality and Assurance  624

Chapter Overview  624
   Overview of This Chapter  628

11.1 Statistical Basis of Control Charts  629
   Problems for Section 11.1  631

11.2 Control Charts for Variables: The $\bar{X}$ and $R$ Charts  633
   $\bar{X}$ Charts  636
   Relationship to Classical Statistics  636
   $R$ Charts  638
   Problems for Section 11.2  639

11.3 Control Charts for Attributes:
   The $p$ Chart  641
   $p$ Charts for Varying Subgroup Sizes  643
   Problems for Section 11.3  644

11.4 The $c$ Chart  646
   Problems for Section 11.4  648

11.5 Classical Statistical Methods and Control Charts  649
   Problem for Section 11.5  649

*11.6 Economic Design of $\bar{X}$ Charts  650
   Problems for Section 11.6  656
