Preface

1	Introduction	
1.1	Expected Utility Theory	
1.2	Uncertainty Aversion, Ellsberg and Allais	
1.3	Structural Versus Reduced-Form Methods	
1.4	Exercises	
1.5	References	
2	Components of a Dynamic Programming Model	9
2.1	Examples	9
2.2	Data Configurations	13
2.3	The Objective Function	16
2.4	The State Variables	17
2.5	The Control Variables	18
2.6	The Transition Distribution	19
2.7	The Curse of Dimensionality	21
2.8	The Curse of Degeneracy	22
2.9	Exercises	24
2.10	References	25
3	Discrete States and Controls	26
3.1	Solving DP Problems: Finite Horizon	26
3.2	Solving DP Problems: Infinite Horizon	30
3.2.1	The Method of Successive Approximation	32
3.2.2	The Method of Policy Iteration	34
3.3	Identification: A Preview	35
3.4	Exercises	37
3.5	References	37
4	Likelihood Functions for Discrete State/Control Models	38
4.1	Likelihood with Complete Observability	38
4.2	Measurement Error	45
4.3	Imperfect Control	51
4.4	Conclusions	54
4.5	Exercises	55
4.6	References	55

5	Random Utility Models	57
5.1	Introduction	57
5.2	The Value Function	59
5.3	A Binary Utility Shock	60
5.4	A Continuously Distributed Utility Shock	62
5.5	Choice Probabilities	65
5.6	Dynamic Continuous Random Utility	66
5.7	Exercises	69
5.8	References	70
6	Continuous States, Discrete Controls	71
6.1	Introduction	71
6.2	Transition Distributions and Utility	73
6.3	The Value Function and Backward Recursion	74
6.4	Example: Exercising an American Option	76
6.5	Infinite Horizon: Contraction and Forward Recursion	79
6.6	Example: Optimal Stopping in Discrete Time	83
6.7	Exercises	85
6.8	References	85
7	Econometric Framework for the Search Model	87
7.1	The Search Model	87
7.2	Likelihood: General Considerations	89
7.3	Likelihood: Specifics for Wage Data	94
7.3.1	Wage Data Alone—One Parameter	96
7.3.2	Wage Data—Two Parameters	97
7.3.3	Wage Data Alone—Offer Arrival Probability	99
7.4	Likelihood: Wage and Duration Data	100
7.4.1	Wage and Duration Data—Two Parameters	100
7.4.2	Wage and Duration Data—Three Parameters	102
7.4.3	Wage and Duration Data—Gamma Distribution	104
7.5	Exercises	107
7.6	References	108
8	Exact Distribution Theory for the Job Search Model	109
8.1	Introduction	109
8.2	The Prototypical Search Model	110
8.3	Alternative Economic Parametrizations	115
8.4	Models for Joint Wage and Duration Data	122
8.5	Conclusion	127
8.6	Exercises	128
8.7	References	128
9	Measurement Error in the Prototypical Job Search Model	129
9.1	Introduction	129
9.2	The Prototypical Search Model	130
9.3	The Prototypical Model with Measurement Errors	132
9.4	Characterizing the Distribution of Measurement Errors	134
9.5	Estimation in the Prototypical Model with Measurement Errors	136

9.6	Application to the SIPP Data Set	139
9.7	Conclusions	146
9.8	Exercises	146
9.9	References	147
10	Asset Markets	148
10.1	Introduction	148
10.2	General Asset Pricing	148
10.3	The Term Structure of Interest Rates	150
10.4	Forward Contracts	154
10.5	Futures Contracts	156
10.6	Introduction to Options	160
10.7	The Binomial Method	162
10.8	Empirical Applications	166
10.8.1	Time Series Properties	167
10.8.2	Portfolio Models	174
10.8.3	Time-Varying Volatility	181
10.8.4	Term Structure Analysis	184
10.9	Exercises	191
10.10	References	191
11	Financial Options	192
11.1	Introduction	192
11.2	Financial Option Exercise and Job Search	192
11.3	Multiple Finite-Horizon Options	194
11.4	Markov Stock Prices	196
11.5	Value Functions for American Options	199
11.6	Option Price Data	205
11.7	Testing Option Market Efficiency	208
11.8	Exercises	212
11.9	References	212
12	Retirement	213
12.1	Introduction	213
12.2	A Simple Retirement Model	213
12.3	The Likelihood Function	216
12.4	Longitudinal Data	221
12.5	Regularizing the Likelihood	224
12.6	Generalizations	232
12.7	Alternative Models	236
12.8	Application: The Joint Retirement of Married Couples	240
12.9	Exercises	242
12.10	References	243
13	Continuous States and Controls	244
13.1	Introduction	244
13.2	The Linear-Quadratic Model: Finite Horizon	245
13.2.1	An Application: Macroeconomic Control	247
13.2.2	Rational Expectations	248

13.3	The Linear-Quadratic Model: Infinite Horizon	249.
13.3.1	Application: Macro Policy with Rational Expectations	250
13.4	Estimation of Linear-Quadratic Models	251
13.4.1	The Curse of Degeneracy	251
13.4.2	Sources of Noise	251
13.4.3	Measurement Error	253
13.4.4	Imperfect Control	253
13.4.5	Random Utility	254
13.5	The General (Non-LQ) Case	256
13.6	Smoothness: Euler Equations	260
13.7	Discussion and Examples	261
13.8	Random Utility in the General Case	264
13.9	Exercises	264
13.10	References	265
14	Continuous-Time Models	266
14.1	Introduction	266
14.2	Optimal Stopping in Continuous Time	269
14.3	A Jump Process Application: Allocation of Time over Time	270
14.4	Dynamic Consumption and Portfolio Choice	274
14.5	Application: Changing Investment Opportunities	278
14.6	Derivatives, Hedging, and Arbitrage Pricing	281
14.7	Stochastic Volatility and Jumps	289
14.8	The Term Structure of Interest Rates in Continuous Time	298
14.9	Exercises	310
14.10	References	310
15	Microeconomic Applications	312
15.1	Introduction	312
15.2	Bus Engine Replacement	313
15.3	Aircraft Engine Maintenance	314
15.4	Medical Treatment and Absenteeism	316
15.5	Nuclear Power Plant Operation	317
15.6	Fertility and Child Mortality	319
15.7	Costs of Price Adjustment	320
15.8	Schooling, Work, and Occupational Choice	322
15.9	Renewal of Patents	323
15.10	Marketing—Direct Mailing of Catalogs	324
15.11	Scrapping Subsidies and Automobile Purchases	326
15.12	On-the-Job Search and the Wage Distribution	327
15.13	Exercises	329
15.14	References	330
16	Macroeconomic Applications	331
16.1	Consumption as a Random Walk	331
16.2	Consumption and Asset Returns	333
16.3	Dynamic Labor Demand	334
16.4	Time Inconsistency of Optimal Plans	336

16.5	Time to Build	• 338
16.6	Nonseparable Utility	339
16.7	Preferences of Monetary Authorities	341
16.8	Dynamic Labor Supply	342
16.9	Effects of U.S. Farm Subsidies	345
16.10	Exercises	346
16.11	References	346
17	Finance Application: Futures Hedging	347
17.1	Hedging Strategies	347
17.2	Self-Financing Trading Strategies	350
17.3	Estimation	353
17.4	Exercises	359
17.5	References	359
18	Intertemporal Asset Pricing ;	360
18.1	Introduction	360
18.2	Prices and Returns	361
18.3	Capital Asset Pricing Model	362
18.4	Estimation ""	363
18.5	A Structural Model	365
18.6	Asset Pricing Puzzles	369
18.7	Exercises	376
18.8	References	376
19	Dynamic Equilibrium: The Search Model	377
19.1	Introduction	377
19.2	Homogeneous Equilibrium Search	378
19.3	Data Distribution and Likelihood	383
19.4	Panels with Partially Missing Observations	389
19.4.1	The Contribution of Unemployment Duration	390
19.4.2	The Contribution of Wages	390
19.4.3	The Contribution of Employment Duration	392
19.4.4	A Numerical Example	394
19.5	Geometric Information Decomposition	395
19.5.1	Destination State Information	400
19.6	Data and Summary Statistics	403
19.7	Empirical Results	406
19.8	Conclusion	414
19.9	Exercises	415
19.10	References	415
20	Dynamic Equilibrium: Search Equilibrium Extensions	416
20.1	Introduction	416
20.2	Measurement Error in Wages	416
20.3	Heterogeneity in Productivity: The Discrete Case	420
20.4	Heterogeneity in Productivity: The Continuous Case	424
20.5	Conclusion	429

20.6	Exercises	429
20.7	References	429
Appendix: Brief Review of Statistical Theory		431
A.1	Introduction	431
A.2	Exponential Families	432
A.3	Maximum Likelihood	434
A.4	Classical Theory of Testing	437
